About This Guide

This guide describes how to create and administrate non-retail clients and their accounts for use in the Unisys Banking Back-Office Processing product.

The information contained in this guide is also available as online help.

Scope

This guide is for non-retail users and describes the Client functions and associated data screens present in the system. Examples of the screens are shown together with information regarding their use. Client is divided into Client Administration and Client Accounting. Use of the system from a retail perspective is described in a separate manual, the *Retail Clients and Accounts Guide Administration Guide*.

Audience

This guide is intended for personnel setting up new clients and their accounts and maintaining details for existing client accounts.

Prerequisites

Any person using this guide should be familiar with the user documentation. Users of this guide should have read the S*tarter's Guide* that provides instruction in the use of the system.

How to Use This Guide

This guide should be used as a reference tool when preparing information for data entry. Use the guide in conjunction with a copy of your *Guide to Setting Up* and your *Core Functions and Inquiries Guide*. Refer to the *Core On-Demand Reports Guide* for instructions on how to select and run the reports that provide this information.

About Urbis

The usage of the product name Urbis is due to be phased out as part of the Unisys re-branding exercise. The replacement will be the generic term "Banking Back-Office Processing" solution or "Banking Back-Office" for short. To provide continuity with existing product documentation, the name Urbis is used within this document, but is synonymous with Banking Back-Office Processing.

Organisation

This guide consists of six sections and three appendices:

Section 1. Introduction to Client Administration

This section provides an introduction to Client Administration, briefly describing the relationships between the screens included.

Section 2. Client Administration screens

This section describes the data entry screens associated with adding a client to the system. An example and a short description of each screen is given.

Section 3. Introduction to Client Accounts

This section provides an introduction to the Client Accounting module; it briefly describes the features available with a client account.

Section 4. Client Account Screens

This section describes the data entry screens that are used to set up and maintain client accounts on the system. The section also includes the inquiry screens relevant to client accounts. An example and a short description of each screen is given.

Section 5. Automatic Payments

This section describes the data entry screens that are used to set up and maintain standing orders for client accounts. An example and a short description of each screen is given.

Section 6. Definition of Field Names

This section provides definitions of all the field names on the screens in this guide. The fields are listed alphabetically and details of valid entries are given.

Appendix A. US-Specific Functionality

This appendix gives details of the functionality of the Client Accounts module that is specific to the United States of America.

Appendix B. Calculations

This appendix gives the calculations used by the Client Accounts module.

Appendix C. Client Account Management Services

This appendix describes Client Account Management Services functions, including negative balance checking, account analysis and maintenance of target balances.

Related Product Information

Product Overview (3937 0234)

This document describes the capabilities and benefits of the modules of the Banking Back-Office Processing system. It consists of an overview of the system, and a description of each of the modules and interfaces available. It is intended for use by senior management.

Operations Reference Card (3937 0986)

This document is a single card that provides a list of screen names and their mnemonics. The list is organised according to the menu structure of the Graphical User Interface. The card also describes how to log on and off the system, enter data, make inquiries and print reports. These instructions are relevant to the Graphical User Interface only.

Starter's Guide (3937 0531)

This guide describes how to enter data and make online inquiries. It also includes a description and example of commonly used data entry and inquiry screens. This guide is intended for all new and inexperienced personnel who need to enter data and make inquiries.

Guide to Setting Up (3937 0945)

This guide describes how to set up parameters that govern the operating environment of the system. It describes the procedures for setting up the business and operational tables, and setting up usercodes and access security. The procedures for setting up blueprint parameters are provided with a description of each parameter. It should be used by all persons involved in installation, implementation and maintenance of these system parameters.

Core Functions and Inquiries Guide (3937 0952)

This guide describes the kernel functions that are used regularly for the maintenance of information utilised by a number of modules. It describes the procedures for setting up and maintaining data, such as market rates and dealers. It also describes inquiries that are common to all contracts. This guide is relevant to all users.

Settlements Guide (3937 0366)

This guide describes the processes associated with settlements and customer transfers. It details how to administer the settlement queues. This guide also describes how to use the Straight Through Processing and Netting functions. It should be used by personnel managing the settlements department.

General Ledger Administration Guide (3937 0457)

This guide describes the data entry screens associated with General Ledger transactions. This should be used by personnel preparing information for data entry.

Risk Management Administration Guide (3937 0358)

This guide describes the data entry screens associated with setting up limits and exposures. The guide also describes the screens associated with portfolios. The amounts that represent book and market values are listed by module in an appendix. This guide is intended for personnel preparing information for data entry and those concerned with controlling risk.

Commercial Loans Administration Guide (3937 0150)

This guide describes the data entry screens associated with Commercial Loan transactions. This includes entry of commitments, various types of drawdown and contract schedules. An appendix gives the calculations used in the processing of Commercial Loan transactions. This guide is intended for personnel preparing information for data entry.

Foreign Exchange and Money Market Administration Guide (3937 0135)

This guide describes the data entry screens associated with Foreign Exchange and Money Market transactions. An appendix gives the calculations used in the processing of Foreign Exchange and Money Market transactions. This guide is intended for personnel preparing information for data entry.

Forward Rate Agreements and Interest Rate Swaps Administration Guide (3937 0168)

This guide describes the data entry screens and some related inquiries associated with Forward Rate Agreement and Interest Rate Swaps transactions. An appendix gives the calculations used in the processing of Forward Rate Agreement and Interest Rate Swap transactions. This guide is intended for personnel preparing information for data entry.

Futures Administration Guide (3937 0176)

This guide describes the data entry screens associated with Futures transactions and some related inquiries. An appendix gives the calculations used in the processing of Futures transactions. This guide is intended for personnel preparing information for data entry.

Traded Options Administration Guide (3937 0184)

This guide describes the data entry screens associated with Options transactions. An appendix gives the calculations used in the processing of Options transactions. This guide is intended for personnel preparing information for data entry.

OTC Options Administration Guide (3937 1034)

This guide describes the data entry screens associated with OTC Options transactions. An appendix gives the calculations used in the processing of OTC Options transactions. This guide is intended for personnel preparing information for data entry.

Securities Administration Guide (3937 0341)

This guide describes the data entry screens associated with Interest Bearing Securities, Discounted Securities and Repurchase Agreements transactions and some related inquiries. An appendix gives the calculations used in the processing of Securities transactions. This guide is intended for personnel preparing information for data entry.

Trade Finance Administration Guide (3937 0119)

This guide describes the data entry screens used by the Trade Finance department. This guide is intended for personnel preparing information for data entry.

Generalised Fees Administration Guide (3937 0374)

This guide describes the data entry screens associated with Fee transactions and supporting business table. This guide is intended for personnel preparing information for data entry.

Core On-Demand Reports (3937 0853)

This guide describes how to run online reports that are provided in the core of the system and which will be relevant to most implementations of the system. Any options available when producing a report are detailed as well as any specific calculations.

On-Demand Reports Guide (3937 0937)

This guide describes on-demand reports in alphabetical order. Any options available when producing a report are detailed as well as any specific calculations. Note: core reports are described in the Core On-Demand Reports Guide; retail reports are described in the Retail On-Demand Reports Guide.

Overnight Reports (3937 0861)

This guide describes how to run offline reports. This includes an overview of overnight processing. Instructions on how to initiate reports are given. This guide should be used by all personnel who need to understand the reports and the overnight process.

Data Dictionary (3937 0226)

This document provides details of data fields within every dataset on your banking systems database. This document should be used by staff preparing the accounting models and writing SQL reports to inquire on the database.

Guide to Interfaces with External Systems (3937 0911)

This guide describes the running of all the interfaces between your Banking Back-Office system and external systems. This guide is intended for personnel involved in setting up and running external interfaces.

Order Transport Management System (3937 1018)

This guide describes how to enter stock exchange securities contracts using the Order Transport and Management System. The screens in this guide allow users to add, maintain and inquire on deals, convert deals into stock exchange securities contracts, and liaise with brokers to complete settlement of a deal. This guide is intended for personnel preparing information for data entry.

Portfolio Management (3937 1026)

This guide describes how to create portfolios for the clients and agents who will be trading stock exchange securities with your institution. A large array of inquiry screens for managing these portfolios is also described. This guide is intended for personnel preparing information for data entry.

Stock Exchange and Securities Management (3937 1000)

This guide describes how to set up and maintain the securities master file, allowing you to record details of stock exchange securities. This guide also describes how to create, maintain and inquire on contracts based on stock exchange securities, including the necessary static data.

Loan Administration System Guide (3937 0994)

This guide describes the data entry screens associated with Syndicated Loans. It includes entry of facilities, and contracts such as drawdowns, guarantees and acceptances and their schedules. The screens in this guide allow users to enter data using workflows. This guide is intended for personnel preparing information for data entry.

Section 1
Introduction to Client Administration

Client Types

Each client in the system has a Client Type associated with it. All clients of a given type have the same basic characteristics. There can be any number of client types in the system, and new types can be added on the Client Types Maintenance (CICTM) screen.

Client types are themselves grouped into Client Categories. There are three basic Client Categories: Company, Personal, and Trust. For example two client types Financial Institution and Heavy Industry could be classed under the client category Company. This is important, as the system will treat the three basic client categories differently, each requiring different screens and information fields to be completed.

***Note**: "Internal" and "Anonymous" client categories also exist, but these are only relevant to a retail system.*

The figure below shows an example grouping of clients. Eight clients are grouped under three Client Types, Bank, Building Society, and Industry. The three client types are then grouped into the Company client category. Nothing has been shown for the two other client categories, although a similar structure could exist for them, depending on your system.

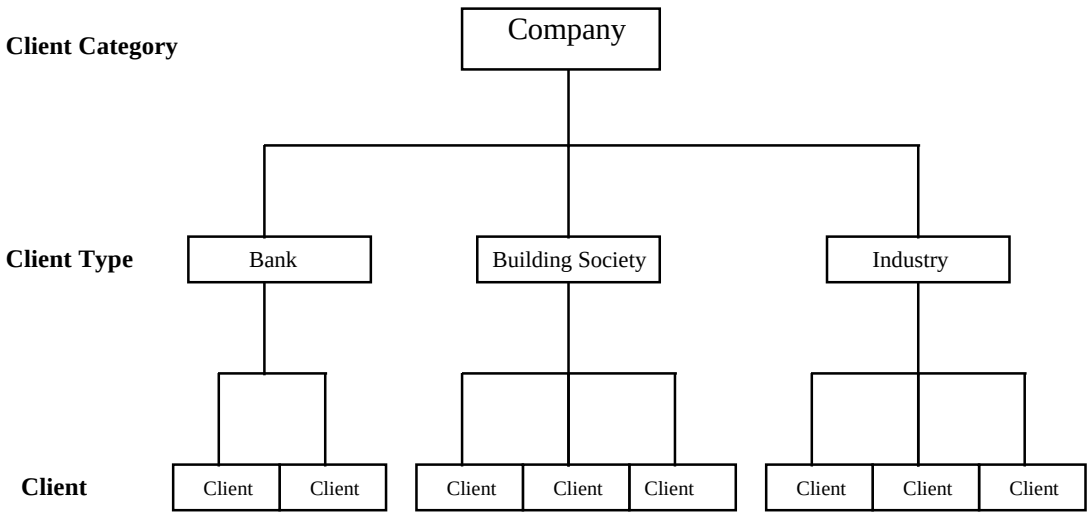

Figure 1-1. Client Category and Type Example

Client Categories

Client Types defined on the system are classified according to one of the following categories:

- **Company**
  Business and non-personal clients, for example corporate client, entrepreneur or club.
- **Personal**
  Any private individual who is a client of your institution, for example staff or a VIP.
- **Trust**
  A non-personal client holding the account for the benefit of a third party, for example a trust fund to benefit a charity.

Within each category, you may define any number of client types. The category to which a client belongs determines the screens you use to set up and maintain client details.

Client Netting Agreements

When a client has been created, and their accounts opened, then contracts of various descriptions can be made for the client. If a client has many contracts, it is possible to gather these into one large payment, so only one payment has to be made. This is termed netting of settlements. There are various advantages to using netting of settlements for a client including:

- Reduction in errors and associated operating losses
- Increased productivity
- Reduction in settlement costs

Before netting can be undertaken for a client, a Client Netting Agreement must be negotiated. This covers the terms of the agreement, including which currencies and product types the agreement covers, and what timeframe it is to be active over. For more information on client netting agreements, see Netting of Contracts in the *Settlements Guide*.

Euro Related Information

Economic and Monetary Union (EMU) is a process by which certain countries in the European Union are converting their national currencies (also called “in” currencies) into a single European currency called the euro.

The system supports this conversion process fully for all currencies and all phases of the conversion (see "Euro Related Information" in the *Core Functions and Inquiries Guide* for more information).

Section 2
Client Administration Screens

Introduction

This section contains the following information:

Setting up Client Types

The following screen is used to set up and maintain client types.

- Client Type Maintenance (CICTM)

Selecting a Client

The following screens are used to identify a client you want to view.

- Client Identification (CACII)
- Client Selection (CASLI)

Adding Client Details

The following screens must be completed when you are creating a new client.

- Client Details - New Client (CINEW)
- Client Details - Banking (CIWSL)
- Client SWIFT Address Maintenance (CISWF)
- Name and Addresses (NAMDM)

The following screens contain information fields that are not essential for the creation or maintenance of a client, but which can be used for recording useful documentation details.

- Client Details - Personal (CIPER) or
  Client Details - Company (CICPY) or
  Client Details - Trust (CITRS)
- Personal Client Details - Financial (CIFIP)
- Personal Client Details - Employment (CIEMP)
- Client Contact Details (CICON)
- Company Client Details - Financial (CIFIC)
- Ratings Maintenance (RATIM)

- Withholding Tax Maintenance (CRTXM)

Changing Client Details

These screens will allow you to change client information:

- Adding Client Detail screens (except Client Details - New Client (CINEW))
- Shortname/City Maintenance (CLSNM)

Inquiring on Client Details

These screens will allow you to inquire on information relating to a client:

- Adding Client Details screens (except Client Details - New Client (CINEW) and Names and Addresses (NAMDM))
- Client Type Inquiry (CICTI)
- Client Names and Addresses Inquiry (NAMDI)
- Banking Client Master Inquiry (CLINI)
- Client Shortname Directory Search (CLSND)

Deleting a Client

A description of how to deactivate a client.

Reports

A list of reports you may find useful while creating, maintaining and inquiring on clients, is given at the end of this section.

For each screen, this section contains the following information:

- A description of its use
- An example of the screen

A full description of the fields on the maintenance screens, and valid entries, is given in Section 6, “Definition of Field Names”.

Please refer to the *Starter’s Guide* for a description of how to access screens and use the Client and Account Selection process.

Setting up Client Types

Client types are identified by a three letter mnemonic. To inquire on the details of the client type you must know this mnemonic. Use the Client Type Inquiry (CICTI) screen to find out the mnemonic for the client type you want. Now use the Client Type Maintenance (CICTM) screen to view the details of a client type. If you are entering a new client type, use the Client Type Inquiry (CICTI) screen to ensure that your new mnemonic does not conflict with an existing one.

Client Types Maintenance (CICTM)

Use this screen to set up and maintain client types. The client type is a template containing default values for information fields that are then transferred to all clients of the type. When adding a new client type, the following fields must be completed:

- **Client Category**.
  This defines the client category the client type belongs to. There are three client categories in the system: Personal, Company, and Trust. More information on client type and client category is available in Client Types in Section 1 of this guide.
- **Description**.
  A brief description of the client type for identification purposes.

The following fields contain default information that is added to the client. Any field left blank will not be used as a default value on a client.

- **Internal Client Type**
  The internal client type of the client.
- **Industrial Class**
  A five digit code used to identify the industry associated with the client.
- **Business Group**
  The business group of the client.
- **Institutional Code**
  A code for the industrial type the client is associated with.
- **Legal Status Code**
  A code relating to the number and access holders of the account have.
- **Account Officer**
  The account officer assigned to clients of this type.
- **STP for Inbound Settlements**
  Indicates whether inbound settlements can be subjected to Straight Through Processing (STP).
- **STP for Outbound Settlements**
  Indicates whether outbound settlements can be subjected to Straight Through Processing (STP).
- **Maximum Amount**
  These two fields contain the maximum inbound and outbound STP settlements allowed for that client.

If the blueprint parameter BP-CLIENT-TMP (see the *Guide to Setting Up)* is set to Y, you can use the Client Types Maintenance (CICTM) screen to link through to the Client Accounts for Client Type (CAACM) screen, which is used in automatic client account generation. For more information, see Client Account Definitions in Section 4 of this manual. To effect this link, select the required Client Type and Client Category and click on **CA Defaults**.

For more information on blueprint parameters, see the *Guide to Setting up*.

The figure below is an example of the Client Types Maintenance (CICTM) screen.

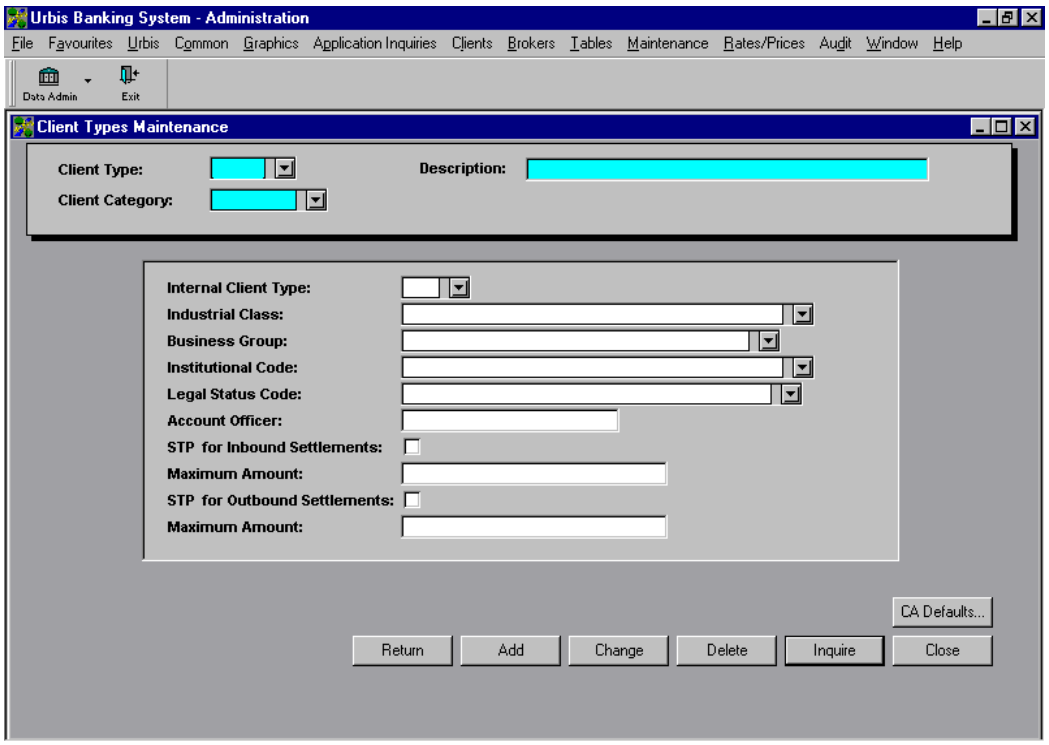

Figure 2–1. Client Types Maintenance screen

Selecting a Client

The following process allows you to select which client you want to view details for. The client must already have been added into your system (see Adding Client Details later in this section). The system stores the last client you accessed in memory, and will assume you want to view details of that client the next time you open a client information screen. If you want to view a different client, you must clear the memory of the old client. To do this select **Clear Memory** from the **Common** menu. This will also clear other information stored, such as which client account you last viewed.

When there is no record of the last client viewed in the memory, then the system will request that you identify the client you want to view by displaying the Client Identification (CACII) screen. This is done automatically when you select a client information screen. The client identification screens cannot be accessed on their own.

When you have performed the client and account selection process, details of the client or account you selected are displayed on the screen that you initially requested. These details are carried forward onto every other inquiry or data entry screen you access that requires the selected item as the key identifier.

Provision of the client selection process gives you a reliable way of distinguishing between duplicates and identifying the correct client. To aid selection, the system enables you to use several keys to identify a client, for example shortname and city. This caters for the different ways that clients may identify themselves to you.

Client Identification (CACII)

This screen is displayed when you attempt to access a screen for which a client must have been selected.

Six means of client identification are available on this screen. Three of these methods are relevant to users of the wholesale system:

- Account Number and Currency
- Client Number
- Client Shortname and City

To start the client identification process, make an entry in one of the fields. Some of the identification fields consist of more than one part, for example ‘Account Number’ and ‘Currency’. An entry in the second part enables you to narrow the search criteria; use of this facility is optional.

The first part of the ‘Client Shortname’ field requires entry of part of a client’s shortname only. You can enter as little as a single letter in this field. You can enter the client’s city in the adjacent field to narrow the search criteria.

For example if you want to view the details of a client whose shortname begins with THI, you select the Client Details - Banking (CIWSL) screen and the Client Identification screen will be displayed. On the Client Identification (CACII) screen you enter THI in the Client Name field and click **OK**.

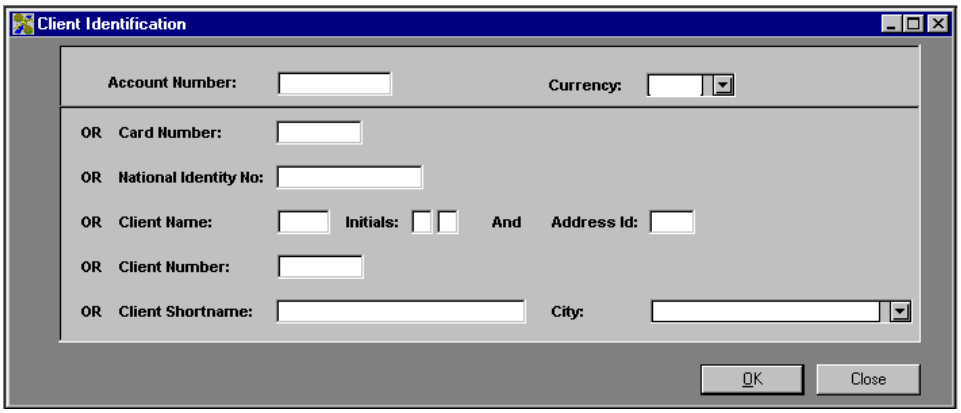

Figure 2–2. Example of Client Identification screen

The system selects all clients that match the entered criteria and displays them on the Client Selection (CASLI) screen.

Client Selection (CASLI)

This screen is displayed after you have entered client selection criteria on the Client Identification (CACII) screen. All clients that match your selection criteria are displayed together with their primary address. This address is defined as address number 1 on the Client Names and Addresses (NAMDM) screen.

Six clients are displayed at a time. If more than six clients are identified, browse through the remaining clients by clicking on **More**.

Select a client by entering the corresponding number in the 'Select Client' field. You must do this while the client name and address is displayed. The system presents the screen that you requested initially (for example the Client Details - Banking (CIWSL) screen) with the client details pre-filled. To return to the Client Identification (CACII) screen and to enter more precise selection criteria, click the **Return** button.

If the client you are searching for cannot be found, it may be because they have not been entered onto the system as a client.

An example of this screen is given in the following figure:

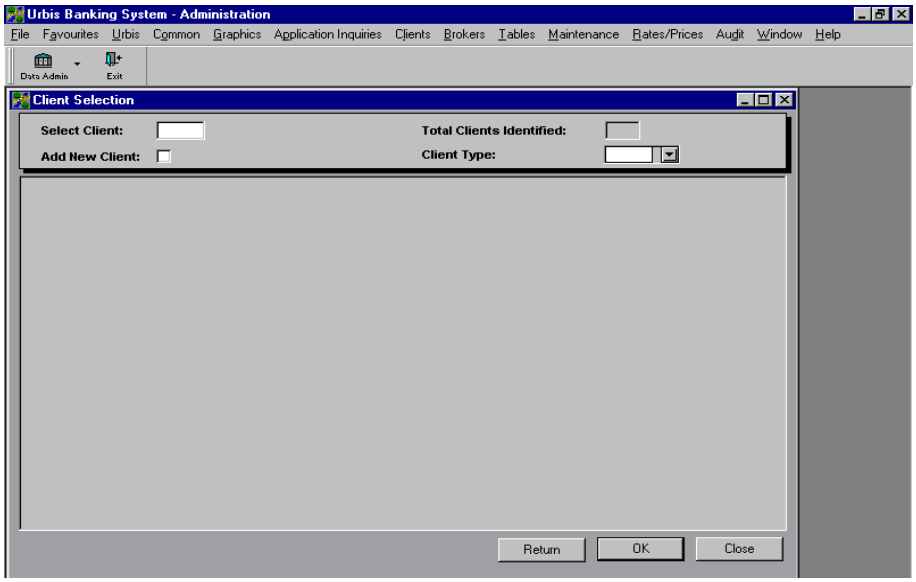

Figure 2–3. Example of Client Selection screen

Adding Client Details

The steps necessary to add a new client to the system are dependant on Client Category. This can be Personal, Company, or Trust. Internal and Anonymous client categories also exist but are only relevant to a retail system

There are three different methods of adding a client, all variations on the same theme. The basic method of adding a client is shown below.

- Call the Client Details - New Client (CINEW) screen. The only information you can enter on this screen is the Client Type. When you have entered this information you will be taken to the Client Details – Banking (CIWSL) screen.
- On the Client Details - Banking (CIWSL) screen you must ensure that the new client identification details (i.e. shortname and city) do not conflict with a previous client's details. When you have entered this information, you will be transferred to the Client Names and Addresses (NAMDM) screen.
- On the Client Names and Addresses screen you can enter up to nine addresses for a client. These can either be for reference or to send statements, confirmations and other information to. The Confirmation Addresses field on the Client Details - Banking (CIWSL) screen defines which of these addresses are used as postal addresses.
- Other screens in the system allow you to enter optional client details. These are not necessary for the processing of the client, but may be helpful in recording secondary client details; see Figure 2.5 Client Information Screens for a list of these supporting information screens.

Once you have completed this flow of screens your client will be active and you will be able to create accounts for the client. If your institution is using the Client Authorisation Queue, then after a client is made active, but before it can be used, it must be authorised by a user on the Client and Exchange Rate Authorisation Queue (AUTHI) screen. See 'Authorisation of New and Changed Client Details', for more information.

You can interrupt the linked flow of screens at any time by calling an alternative screen. However, if you do not complete all the essential screens for a new client, it will have the status of "Draft" and cannot be used by the system, although you can return and complete it later. Clients with incomplete details are deleted by report CIPURGCLI - Client Incomplete Records Purge (see the *Core On-Demand Reports Guide* for details) during end-of-day processing.

Adding a Client after Client Identification

If you want to ensure that a new clients shortname and city combination do not exist already, then you can use the following method for adding a new client.

- Call the Client Details -Banking (CIWSL) screen. You will be taken to the Client Identification (CACII) screen to identify the client you want to view (if a previous client is still selected then clear the client by selecting **Clear Memory** from the **Common** menu).
- Enter the shortname and city for the new client. You will then be taken to the Client Selection (CASLI) screen where any client resembling the details you have entered are displayed.
- If no client exactly matches the client shortname and city combination of the new client, then switch on the "Add New Client" field and enter the "Client Type".

You will then be taken to the Client Details - Banking (CIWSL) screen where you can continue the process of adding a client.

Adding a Client using Client Workflow

The client workflow can make entering a new client easier. The workflow is started by selecting **Clients** and then **Client Workflow** from the Data Administration menu. When selected, buttons appear down the side of the screen, showing the screens relevant to entering a client. Pressing these buttons will then link you to that screen.

To enter a new client you must begin on the Client Details - New Client (CINEW) screen by pressing the "**New Client**" button. Completing this screen will link you to the Client Details - Banking (CIWSL) screen, and then to the Client Names and Addresses (NAMDM) screen. These three essential screens are linked together, so that on completing one you will be taken to the next.

The complementary information screens relevant to the client type of the client you are entering will be displayed as buttons in the lower half of the workflow bar. After completing the essential screens, these may be linked to so that you can enter any complementary information.

The buttons in the client workflow feature change colour when you are accessing the screen they link to. When you are on a screen, the button representing that screen will turn blue, showing it is active.

The following figure is an example of the client workflow system, showing the Client Details - New Client (CINEW) screen.

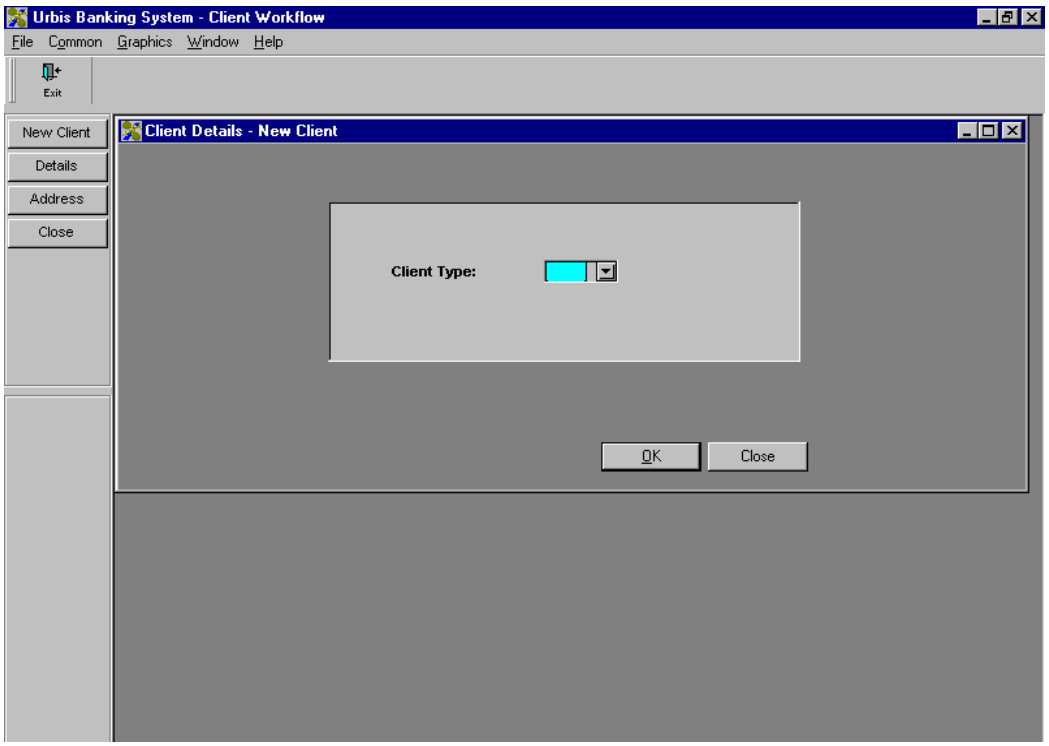

Figure 2-4. Client Workflow example

The following figure shows the flow of screens necessary to create a new client. The Essential Client Information screens must be completed. The Supporting Client Information screens contain information that is useful but non-essential.

Note: *If you have the Loans Administration module, the Client Contact Details (CICON) screen is a mandatory part of the client creation process. Otherwise, it is an optional screen.*

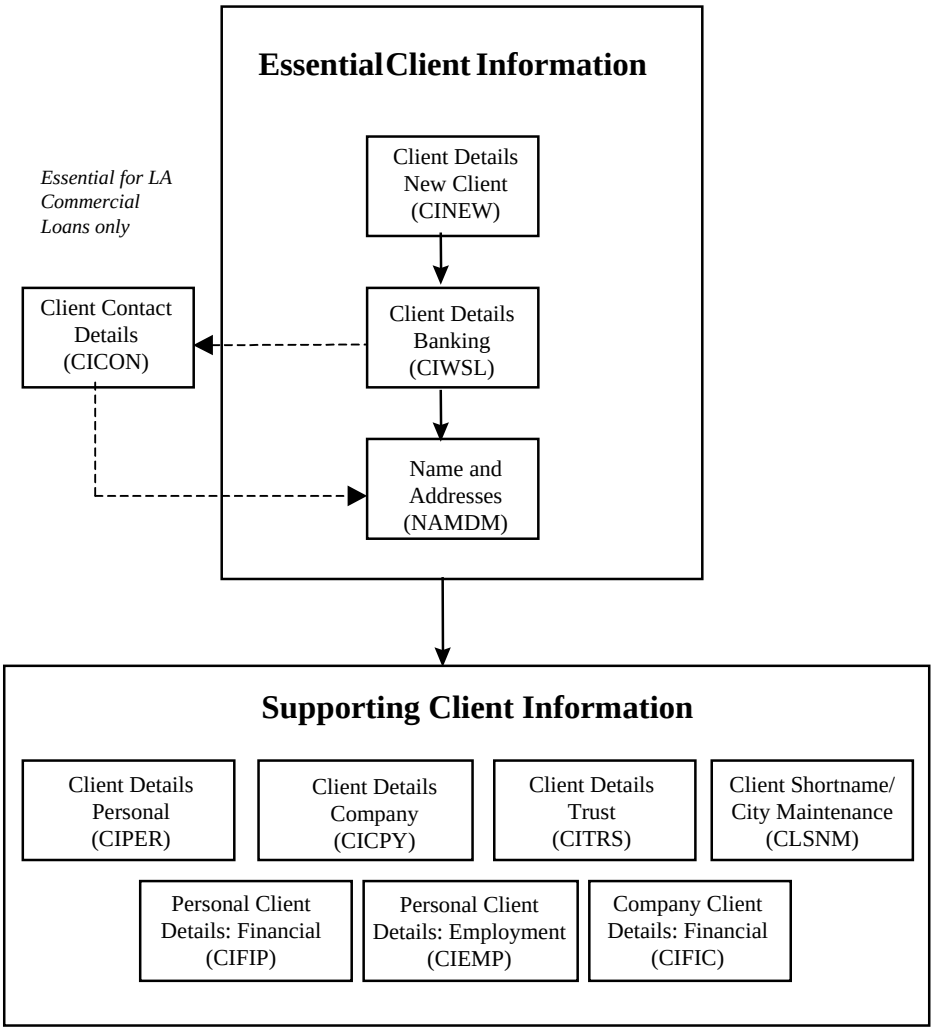

Figure 2–5. Client Information Screen Flow

Client Details - New Client (CINEW)

Use this screen to begin the process of creating a client. On this screen you must, select the Client Type for the client and click the **OK** button.

If you want to alter the client type of a client, you must use the Client Details - Banking (CIWSL) screen.

The following figure shows an example of the Client Details - New Client (CINEW) screen.

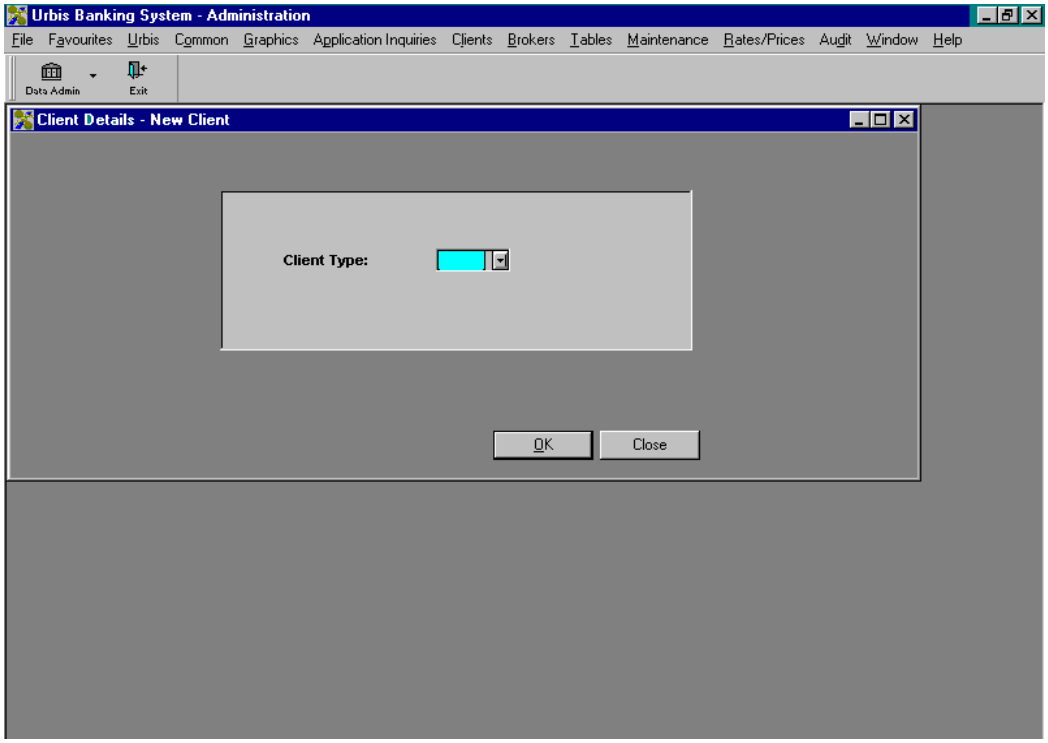

Figure 2–6. Client Details - New Client Screen

Client Details - Banking (CIWSL)

Use this screen to set up the general details of a banking client. When adding a new client, this is the second screen you are taken to.

When adding a client the following fields are mandatory:

Short Name, Long Name, Start Date, Accounting Centre, Account Officer, Telephone, Country of Risk, Country of Residence and Withholding Tax Liability.

In addition, specific fields must be completed depending on the client category:

- **Company** and **Trust**: No extra information is necessary.
- **Personal**: enter the Client First Forename and Title fields.

The Current Amount is the amount as of the settlement date.

Only one SWIFT address and one Copy SWIFT address can be specified but additional SWIFT addresses (one per contract type) can be set in the Client SWIFT Address Maintenance (CISWF) screen. Additional SWIFT addresses cannot be set for Clean Payments (CPAY), Standing Orders (SOSO, SOEX), Nostro Transfer (NSXF) and Netting (NETT) contract types.

The SWIFT Copy Confirmation message is sent to the Copy SWIFT address. If no Copy SWIFT address is defined for the contract type, then the default Copy SWIFT address (defined in Client Names and Addresses (NAMDM) screen) is used as the destination of SWIFT Copy confirmation messages.

The Authorization status consists of Authorized, Waiting and Reject status. You can reject the client's record selected for authorization by selecting the **Reject** button.

When the authorizer selects the **Reject** button the record status on the AUTHO table and the client's table CLINM corresponding will change the record's status from the 'Waiting for 'Authorizing ' to the status 'Rejected'. The client record will be available for new changes. Once the changes are done the new AUTHO record will be created with status 'Waiting for Authorizing' and will be ready for new authorization process through AUTHI screen. The corresponding client's record status on CLINM will change from 'Rejected 'to 'Waiting for Authorization'.

Client Type Default Values

Depending on the client type selected, some of the fields on the Client Details -Banking (CIWSL) screen will be filled by the default values of that client type. You can alter these fields to non-default values if necessary. The fields affected by this are:

The new radio button with the status 'Rejected' is added and it will show the actual status of the client authorization

Internal Client Type, Industrial Class, Business Group, Industrial Code, Legal Status Code, Account Officer, Confirmation Copy Required, Copy Media, Copy Address, STP for Inbound Settlements, STP for Outbound Settlements and both Maximum Amount fields.

You can view the default values for a particular client type by using the Client Types Maintenance (CICTM) screen, described in Setting up Client Types earlier in this section.

The following figure shows an example of the Client Details - Banking (CIWSL) screen.

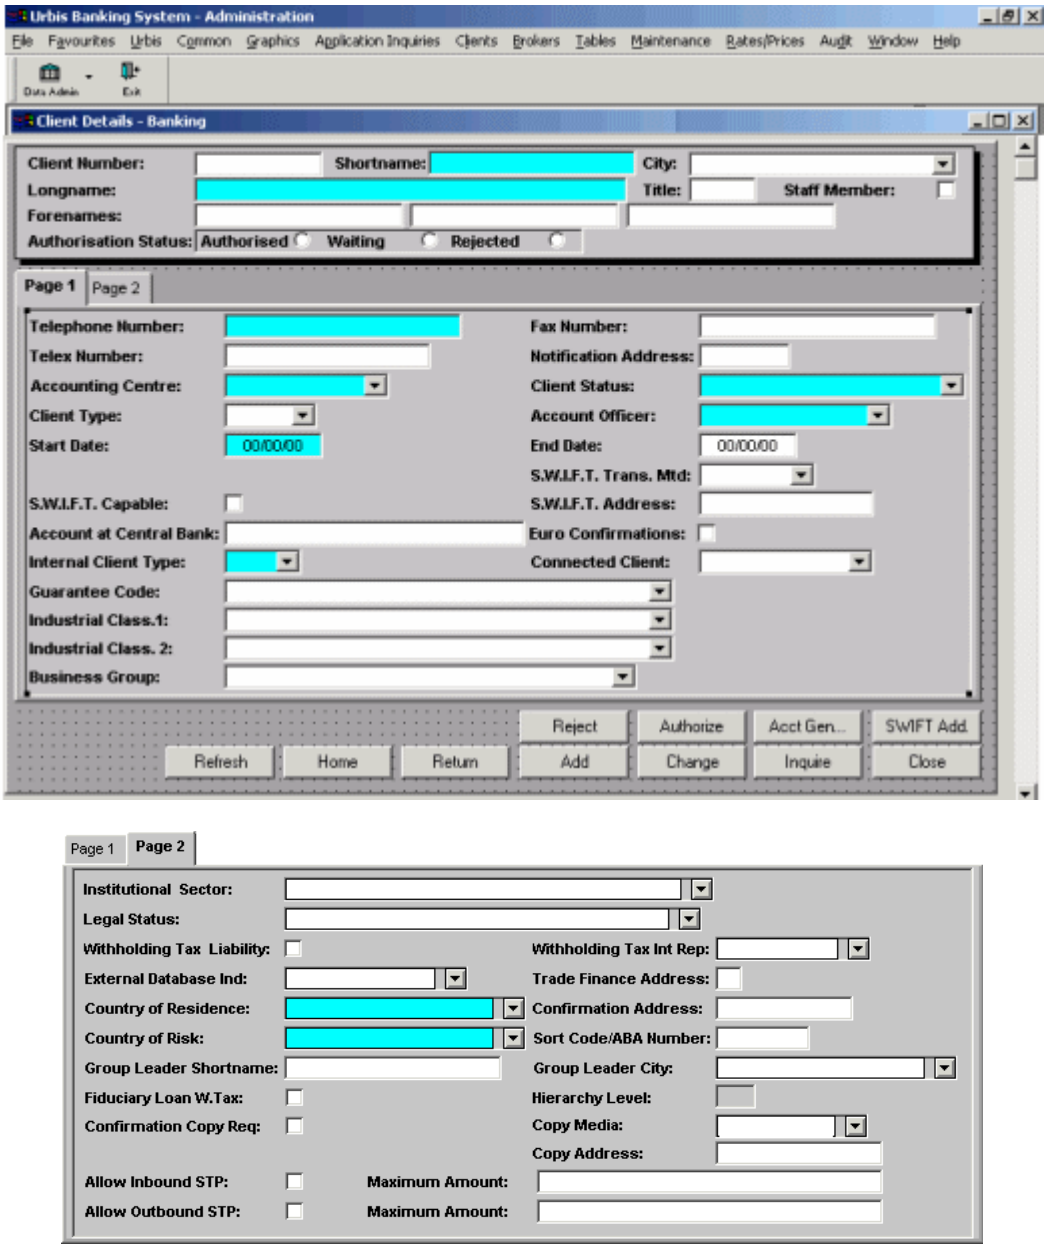

Figure 2–7. Client Details - Banking screen.

Client Contact Details (CICON)

This screen is used to record client contact details. When adding a new client, this is the second screen you are taken to. This screen is only mandatory if the Loans Administration module is present, and the client type is Company or Trust.

The "Contact Name" , "Contact Telephone Number" and "Preferred media for notification" for the Primary Contact are mandatory. All other fields are optional .

If you have the Loans Administration module, you can link to other screens as follows, click on **Client Settlement Instructions** to link to the Client Settlement Instructions for LA (CISIM) screen. Click on **Settlement Inquiry** to link to the LA Settlement Defaults Inquiry (LASTI) screen.

The following figure shows an example of the Client Contact Details (CICON) screen.

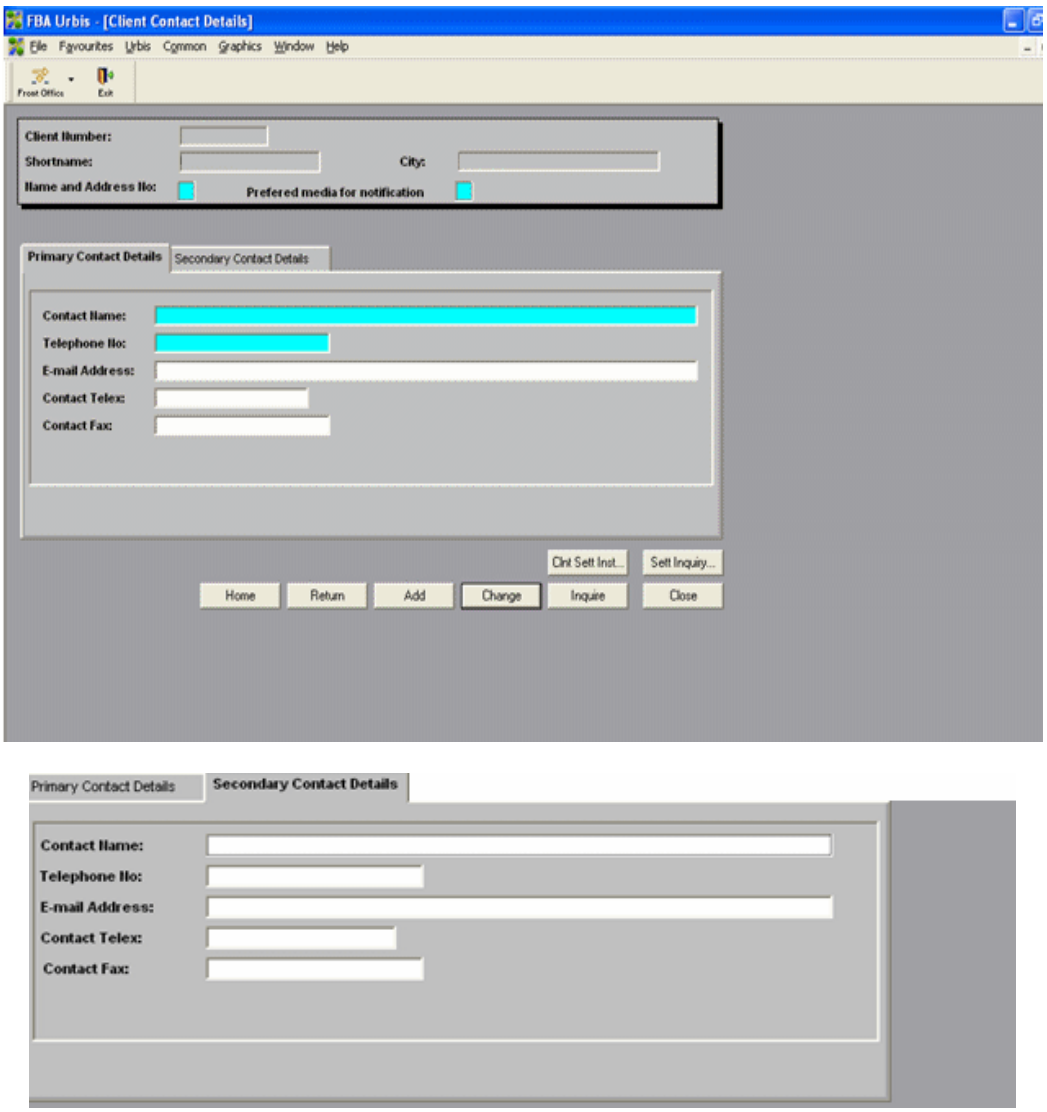

Figure 2–8. Client Contact Details screen.

Client SWIFT Address Maintenance (CISWF)

This screen is used to maintain Client SWIFT and Copy SWIFT addresses per contract type.

It is possible to access this screen directly or through the Client Details -Banking (CIWSL). When accessed through CIWSL, the client used on client details screen will be defaulted on this screen. Multiple lines are available to enter contract type and SWIFT and Copy SWIFT address for the contract type.

***Note**: S.W.I.F.T. addresses is not valid for Clean Payments (CPAY), Standing Orders (SOSO, SOEX), Nostro Transfers (NSFX) or Netting (NETT) contract types.*

The following figure shows an example of the Client SWIFT Address Maintenance (CISWF) screen.

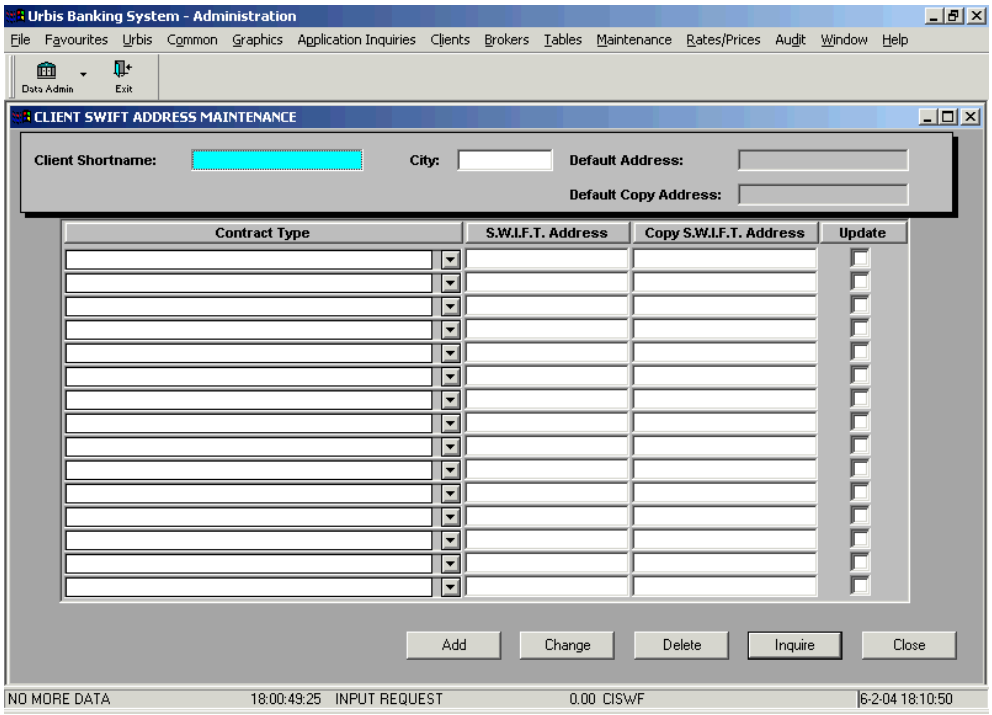

Figure 2–9. Client SWIFT Address Maintenance screen.

Client Names and Addresses (NAMDM)

This screen is used to enter and maintain the names and addresses of a client. Up to 9 addresses can be entered for each client, each being identified by a number (1-9). When the screen is called, it is automatically on the next free address slot. However, any address slot can be viewed by entering its number in the Name and Address Number field and inquiring. If you are only inquiring on a clients names and addresses, use the Name and Address Inquiry (NAMDI) screen.

The fields to be entered on Client Names and Addresses (NAMDM) screen include:

- The full name and address of the client
- The postal country and area of the client
- The language which should be used to correspond with the client at the address
- Set the address to send the confirmation paper copy.
  The address to send the confirmation paper copy is available, only if the field 'Copy Media' is selected as PAPER and 'Confirmation Copy Required' is checked in the Client Details - Banking (CIWSL) screen.
- If ‘All Contract Type’ is checked then no contract type can be entered for the same address. Clean Payments (CPAY), Standing Orders (SOSO, SOEX), Nostro Transfers (NSXF) and Netting (NETT) contract types are not valid.

The addresses entered on this screen are used to post statements, confirmations and other information to clients. You can specify which of the nine addresses these correspondences are sent to using the Confirmation Address field on the Client Details -Banking (CIWSL) screen.

Note: *Once installation is complete, care must be taken when deleting a client name and/or associated addresses from the system. Before you delete a client name/addresses, it is recommended that you then run the ADDRESSRI - Check Client Names/Addresses report to identify instances where the data you intend to delete is used (see the Core On-Demand Reports Guide for details). You may then make amendments as necessary.*

The following figure shows an example of the Client Names and Addresses screen.

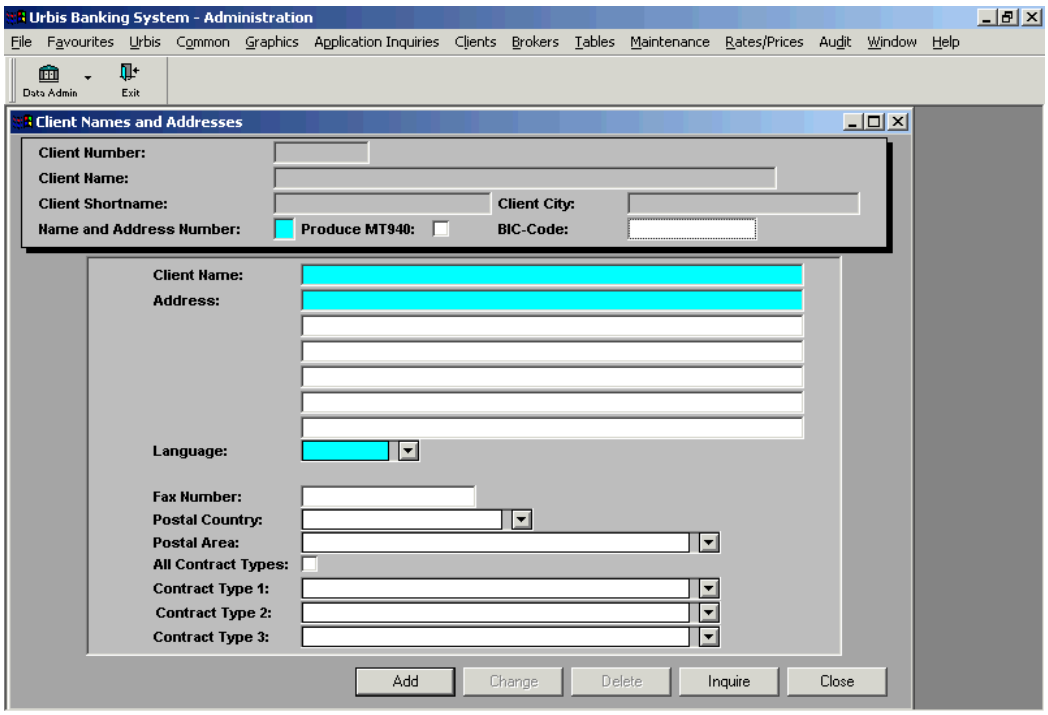

Figure 2–10. Client Names and Addresses screen

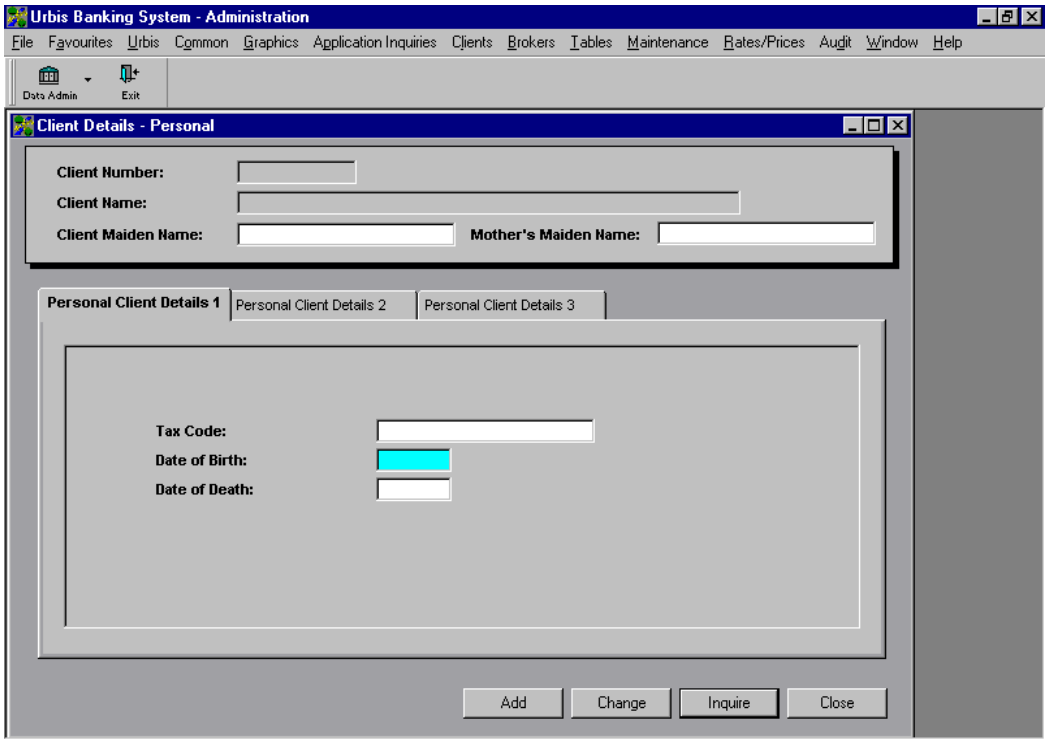

Client Details - Personal (CIPER)

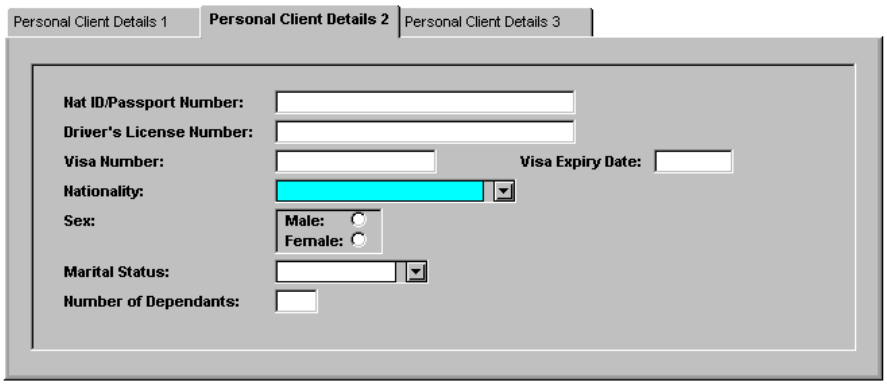

***Note**: This screen is only applicable to personal clients.*

Use this screen to set up supporting details for clients associated with client types that belong to the 'personal' category. When you call the Client Details - Personal (CIPER) screen, the details of the last client you were using will be carried forward to complete the identification fields at the top of the screen.

Information that you may add on the Client Details - Personal (CIPER) screen includes personal data such as a national identity or passport number and date of birth. You may also classify a client in a number of ways, for example according to nationality, employment status and marital status.

The following figure shows an example of the Client Details - Personal (CIPER) screen.

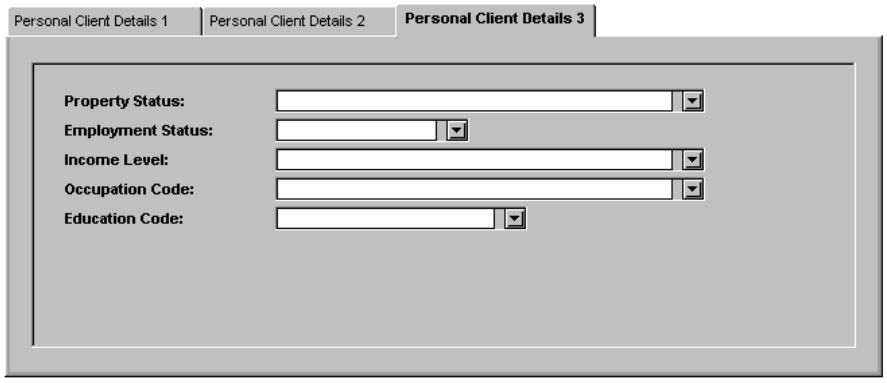

Figure 2–11. Client Details - Personal screen

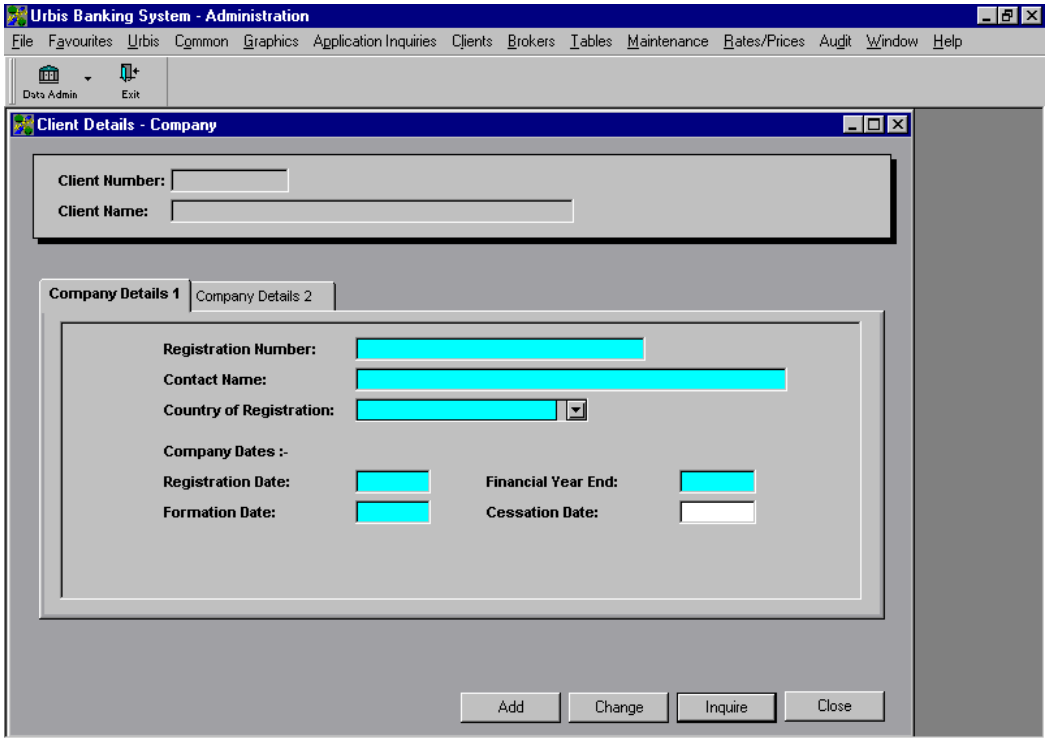

Client Details - Company (CICPY)

***Note**: This screen is only applicable to company clients.*

Use this screen to set up supporting details for clients associated with client types that belong to the "company" category. When you call the Client Details - Company (CICPY) screen, the details of the last client you were using will be carried forward to complete some of the fields.

The details that you can add on the Client Details - Company (CICPY) screen include information such as company registration number and contact name. You may also classify a company in a number of ways, for example according to Line of Business and Financial Institution Type.

The following figure shows an example of the Client Details - Company (CICPY) screen.

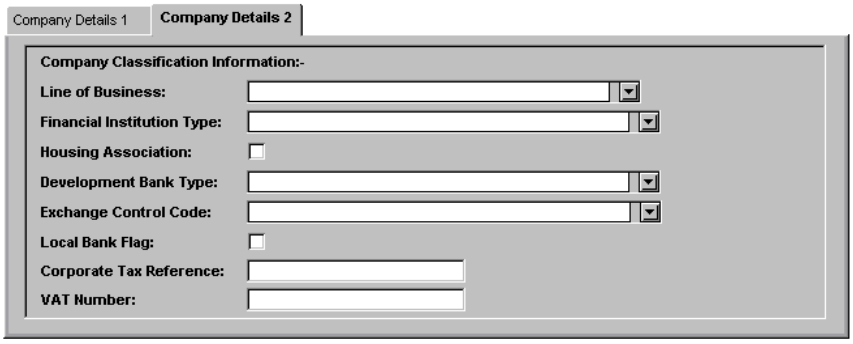

Figure 2–12. Client Details - Company screen

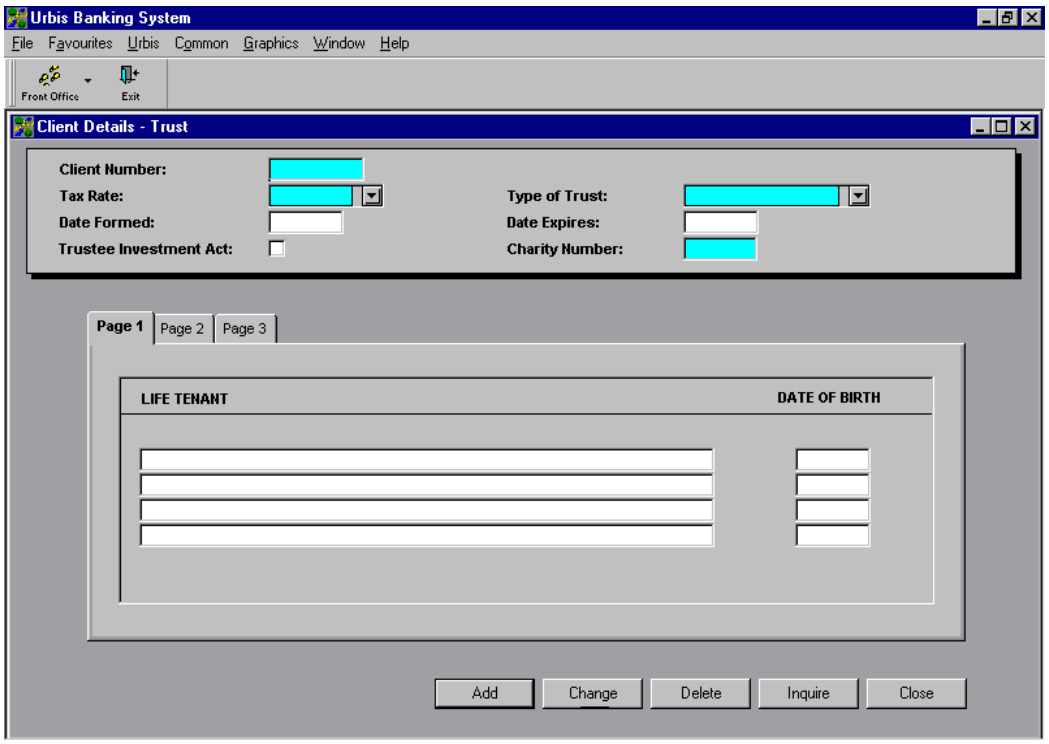

Client Details - Trust (CITRS)

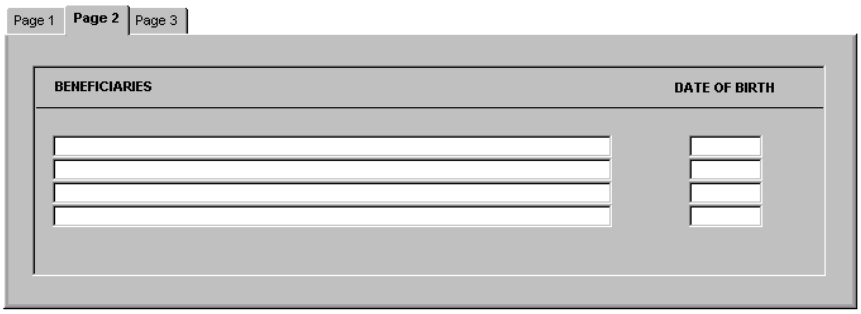

***Note**: This screen is only applicable to trust clients.*

Use this screen to set up supporting details for clients associated with client types that belong to the "trust" category. When you call the Client Details - Trust (CITRS) screen, the details of the last client you were using will be carried forward to complete some of the fields.

The details that you can add on the Client Details - Trust (CITRS) screen include information such as beneficiaries and details of trustees.

The following figure shows an example of the Client Details - Trust (CITRS) screen.

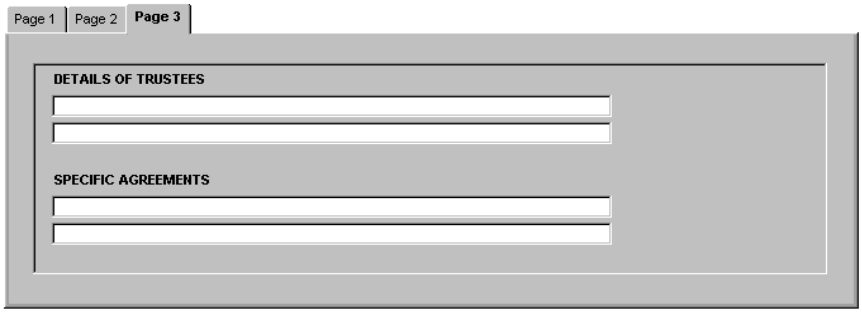

Figure 2–13. Client Details - Trust screen

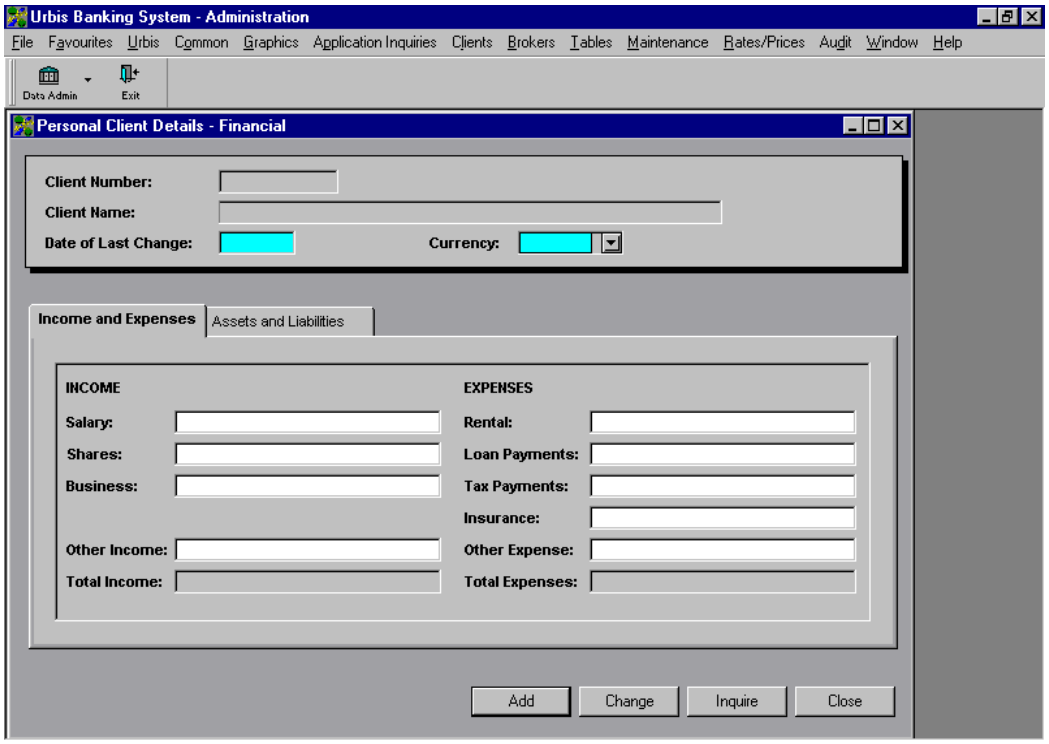

Personal Client Details - Financial (CIFIP)

***Note**: This screen is only applicable to personal clients.*

This screen enables you to enter and maintain financial details of a personal client. This includes details of income, expenses, assets and liabilities.

The Personal Client Details - Financial (CIFIP) screen is applicable to personal clients only. You can record financial details for company clients using the Company Client Details - Financial (CIFIC) screen.

The following figure shows an example of the Personal Client Details - Financial (CIFIP) screen.

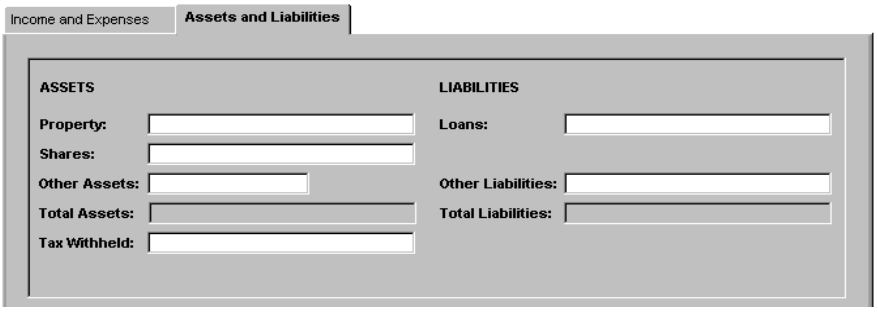

Figure 2–14. Personal Client Details - Financial screen

Personal Client Details - Employment (CIEMP)

***Note**: This screen is applicable to personal clients only.*

This screen enables you to enter and maintain information about a personal client's employment history. For example the employer's name and address, the client's salary, and the date they joined the company. You can record up to nine sets of details by using the 'Employment Sequence' number to reference each set. If you do not enter a sequence number when adding a record, the system assigns it for you.

If the client's employer is a customer of your institution, and you wish to record this fact, you must enter their 'Client Number'. If you do not know the number, use the Client and Account Selection process to identify the client and display their details on the Client Details - Banking (CIWSL) screen. This screen includes the client number.

The following figure shows an example of the Personal Client Details - Employment (CIEMP) screen.

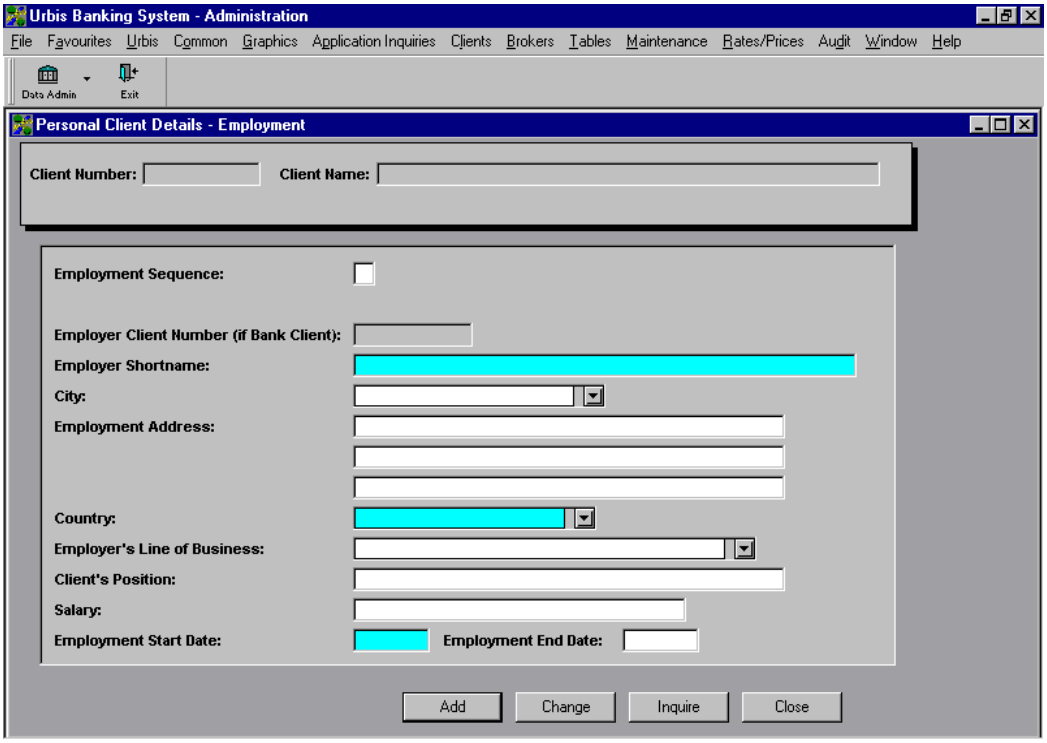

Figure 2–15. Personal Client Details - Employment screen

Company Client Details - Financial (CIFIC)

***Note**: This screen is applicable to company clients only.*

This screen enables you to enter and maintain financial details of a company client. This includes details of income, expense, assets and liabilities.

The Company Client Details - Financial (CIFIC) screen is applicable to company clients only. You can record financial details for personal clients using the Personal Client Details - Financial (CIFIP) screen.

When you have entered all the appropriate values, adding the information to the system will also calculate the Total amounts in each column that is then displayed.

The following figure shows an example of the Company Client Details - Financial (CIFIC) screen.

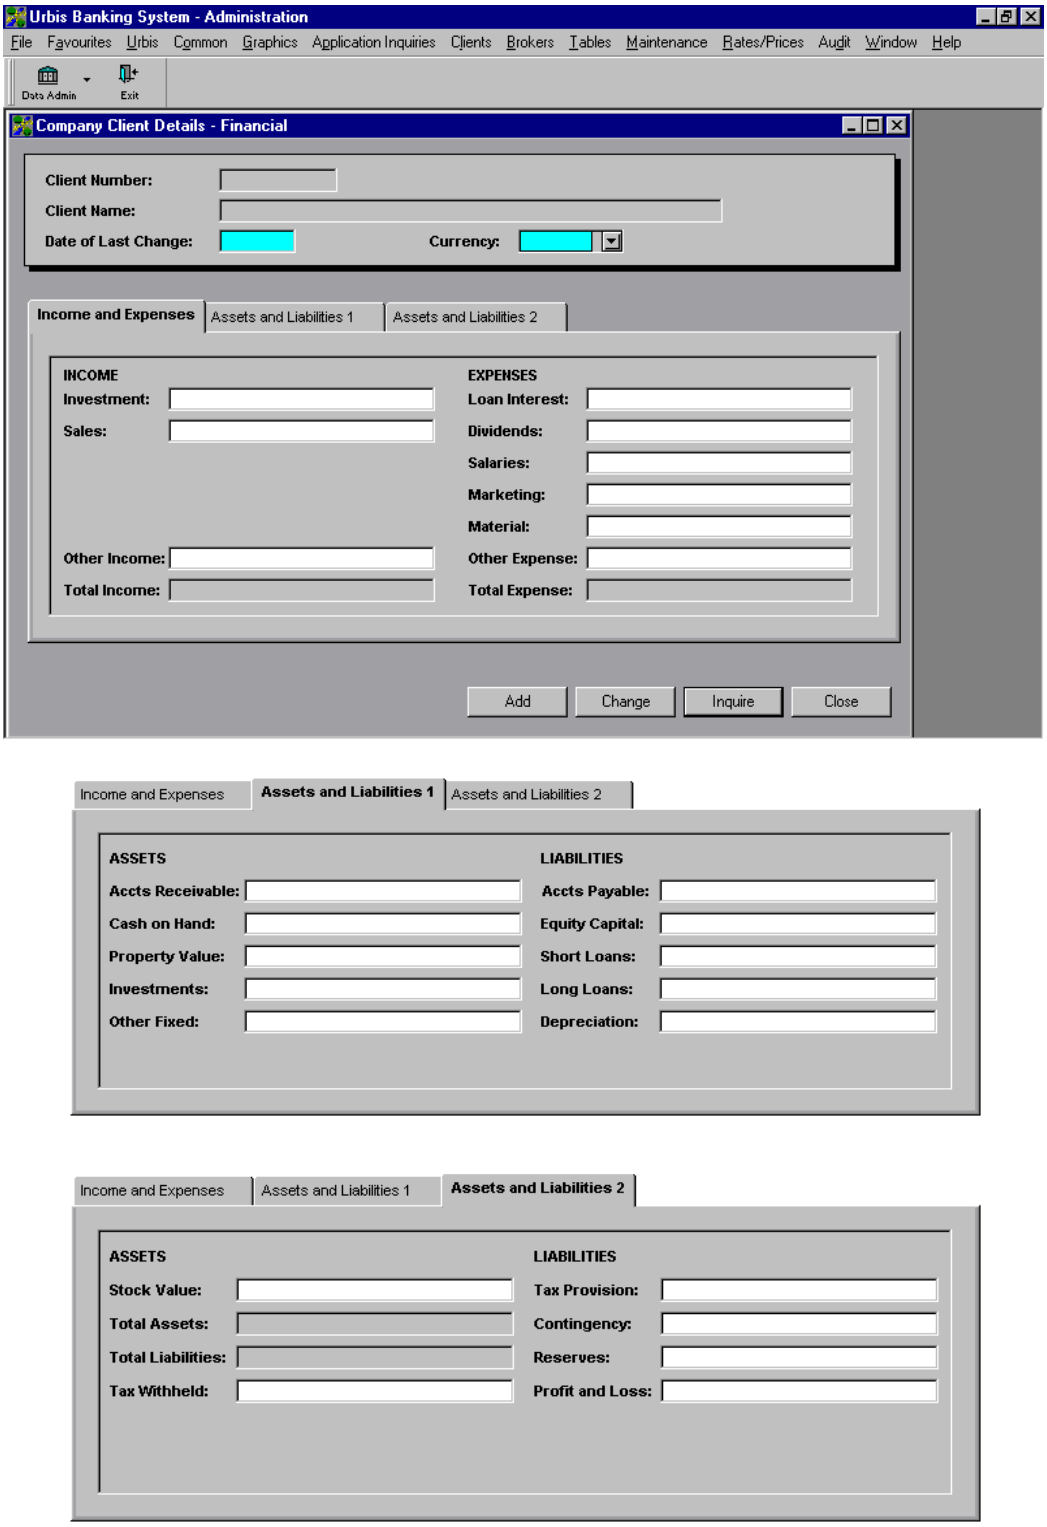

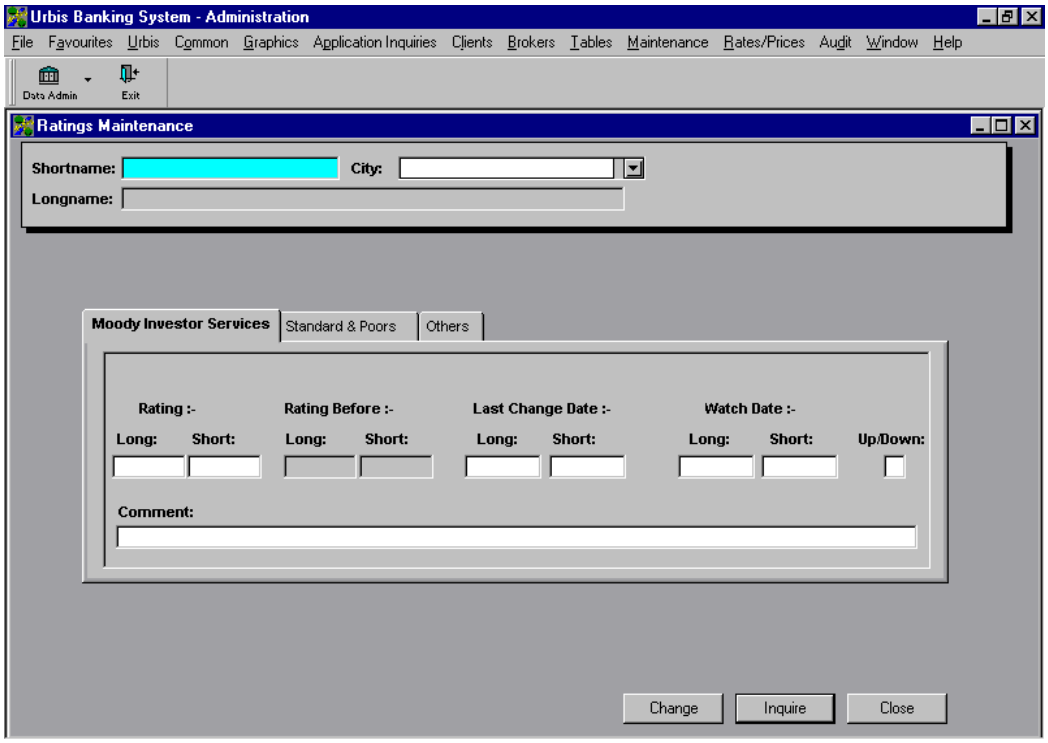

Figure 2–16. Company Client Details - Financial screen

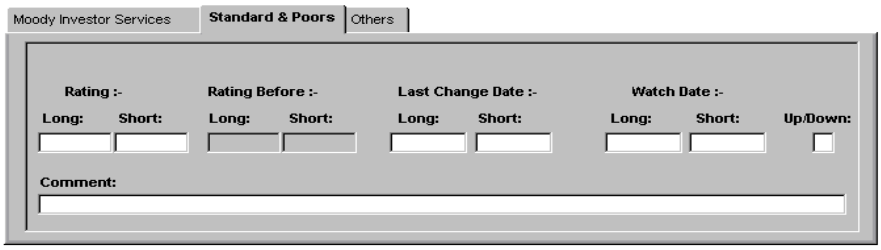

Ratings Maintenance (RATIM)

This screen holds details of a client's ratings, as held by Moody Investor Services, Standard and Poor's or any other Rating Agency. This screen is used for documentary purposes only.

On this screen, for each client, you may enter for each rating agency, the rating, the date of the last change to the rating and the watch date, all for both long and short term debt, and whether the last movement in the rating was up or down. In addition to Moody's and Standard and Poor's, you may add details for another rating agency of your choice.

The following figure shows an example of the Ratings Maintenance screen.

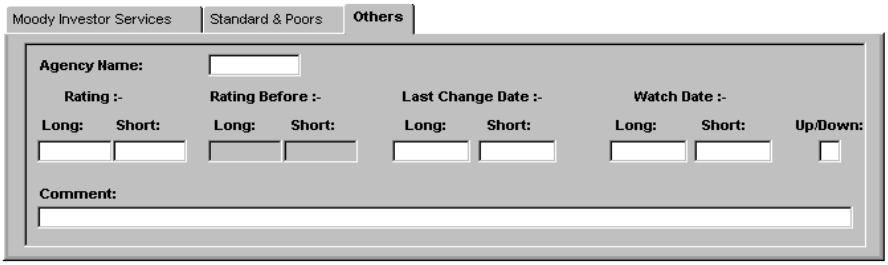

Figure 2–17. Ratings Maintenance screen

Withholding Tax (CRTXM)

This screen is used to assign withholding tax rules to a particular client. On any contract that attracts interest, for example Money Market deposits, interest can be withheld by the bank.

This Withholding Tax is payable on contracts when:

- The principal amount is less than a pre-defined maximum amount
- The deposit is to be repaid within a specified number of calendar days from the start date
- The contract matures at call or at short notice
- The client is liable to Withholding Tax (set up on the Client Master)

The amount of tax payable at settlement is always calculated on the basis of the client's Withholding Tax liability at settlement date. Withholding Tax is deducted from the interest on the settlement date and is maintained for future payment. Interest rates and amounts are entered and reported gross of Withholding Tax.

Details of Withholding Tax are held on the Withholding Tax (CRTXM) table. You can enter the rate and the date from which this rate becomes effective. Note that amendments to the table must be forward dated: changes cannot be applied to interest that has already been paid. You can also enter the minimum amount on which Withholding Tax is payable, and the minimum time for which interest must remain in an account, before it becomes liable to Withholding Tax.

The following figure shows an example of the Withholding Tax screen.

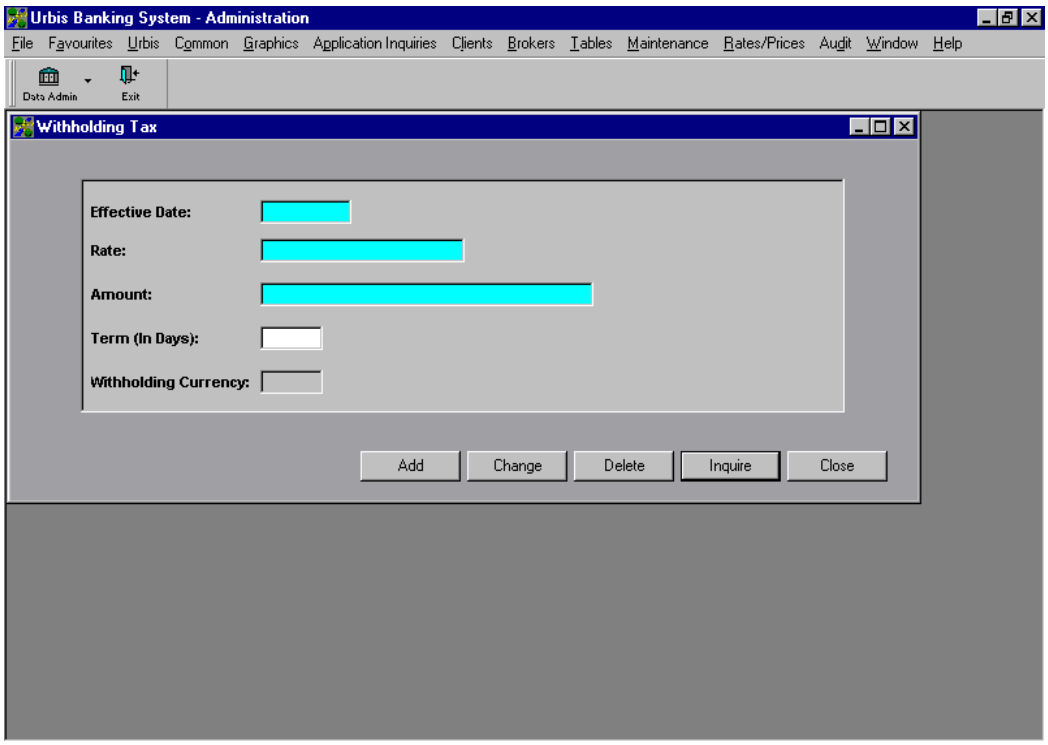

Figure 2–18. Withholding Tax screen

Changing Client Details

Introduction to Changing Client Details

To view or amend a clients details, call the screen where the information to be altered is contained. For example, to view and alter the clients contact telephone number, call the Client Details - Banking (CIWSL) screen. You will first be taken to the Client Identification (CACII) screen where the system will ask you to identify the client you want to amend. If instead you are taken to the screen you requested, then you already have a client selected. This is a feature in the system that recalls the last client accessed and assumes you want to inquire on information for that client. If you want to look at a different client's details, you must first clear the old client by selecting **Common** and then **Clear Memory** from the menu bar.

If your institution is using the Client Authorisation Queue, then before a change can be used, it must be authorised by a used on the Client and Exchange Rate Authorisation Queue (AUTHI) screen. See 'Authorisation of New and Changed Client Details', for more information.

If you change the ‘Client Status’ of a primary account holder to ‘Deceased’ or ‘Missing’, the system puts a hold on any accounts associated with the client.

Use the following screens for maintaining a client:

- Client Details - Banking (CIWSL)
- Client Names and Addresses (NAMDM)
- Client Details - Personal (CIPER)
- Client Details - Company (CICPY)
- Client Details – Trust (CITRS)
- Personal Client Details - Financial (CIFIP)
- Personal Client Details - Employment (CIEMP)
- Company Client Details - Financial (CIFIC)
- Client Shortname/City Maintenance (CLSNM)

Authorisation of New and Changed Client Details

If the authorisation of client details functionality is activated, then when a new client is added, or the details of an existing client are changed, a user of the system must authorise the change. This is activated using the blueprint parameter BP-ATH-REQ-CIWSL, described in the *Guide to Setting Up*.

When a client is added, or a client's details are changed, the client is added to the Client Authorisation Queue. The new or updated client details cannot be utilised until they have been authorised. A user can view all the clients on the Client Authorisation Queue, and can choose which changes to authorise or reject. The Client Authorisation Queue can be viewed on the Client and Exchange Rate Authorisation Queue (AUTHI) screen, described in the *Core Functions and Inquiries Guide*.

The blueprint parameter BP-SAME-USER-ATH enables the same user who entered or changed the client details to authorise the same. See the *Guide to Setting Up* for more information.

Client Shortname/City Maintenance (CLSNM)

This screen is used to amend client shortname and city details. These fields provide the key to clients for whom you have entered details on the Client Details - Banking (CIWSL) screen, but it is only on the Client Shortname/City Maintenance screen that they can be amended.

Both the long and short names for the client may be amended on this screen, but the Client Names and Addresses (NAMDM) screen should be used to amend client name and address information. The Client Names and Addresses (NAMDM) screen is presented automatically on leaving this screen.

The following figure shows an example of the Client Shortname/City Maintenance screen.

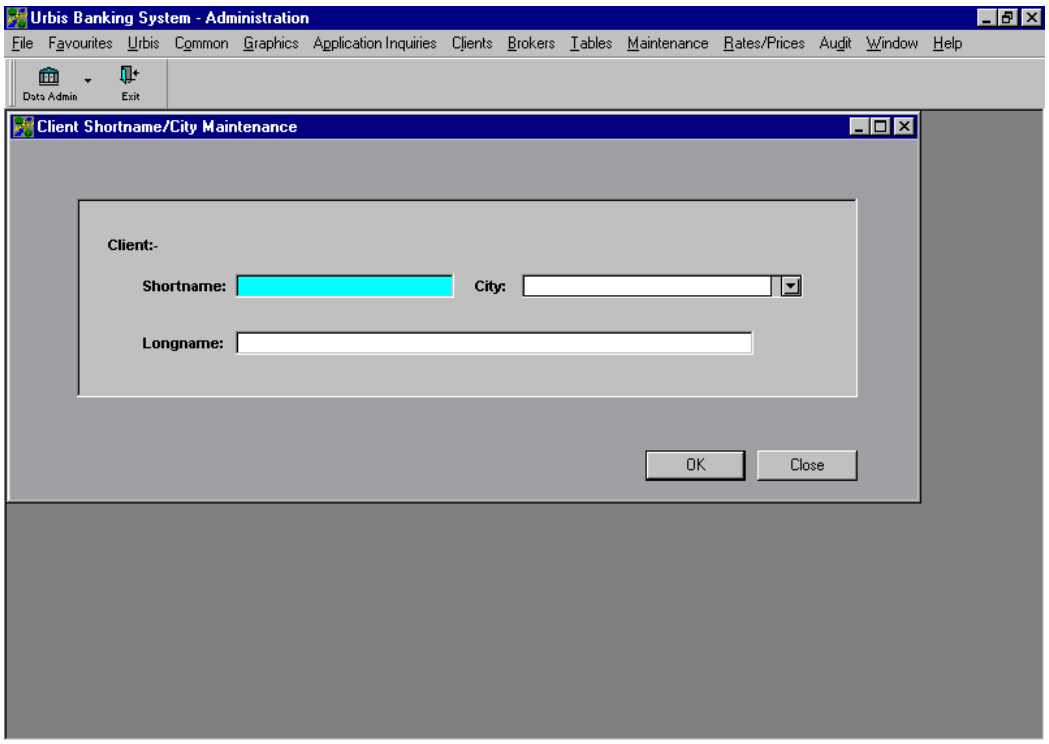

Figure 2–19. Client Shortname/City Maintenance screen

Inquiring on Client Details

Introduction to Inquiring on Client Details

You can use the following Client Information screens to inquire on information contained on them.

- Client Details - Banking (CIWSL)
- Client Details - Personal (CIPER)
- Client Details - Company (CICPY)
- Client Details – Trust (CITRS)
- Personal Client Details - Financial (CIFIP)
- Personal Client Details - Employment (CIEMP)
- Company Client Details - Financial (CIFIC)
- Client Type Inquiry (CICTI)
- Name and Address Inquiry (NAMDI)
- Banking Client Master Inquiry (CLINI)
- Client Shortname Directory Search (CLSND)

Client Type Inquiry (CICTI)

Use this screen to locate the three letter mnemonic used to identify client type. You must give the appropriate client category for the client type you are searching for. Inquiring will then show all the client types in that category. For more information on the categories available see Client Categories in Section 1 of this guide.

Once you have identified the appropriate client type, you can access information on it from this screen. To view the client type information, highlight the appropriate type and click on **Details**.

The figure below is an example of the Client Type Inquiry (CICTI) screen.

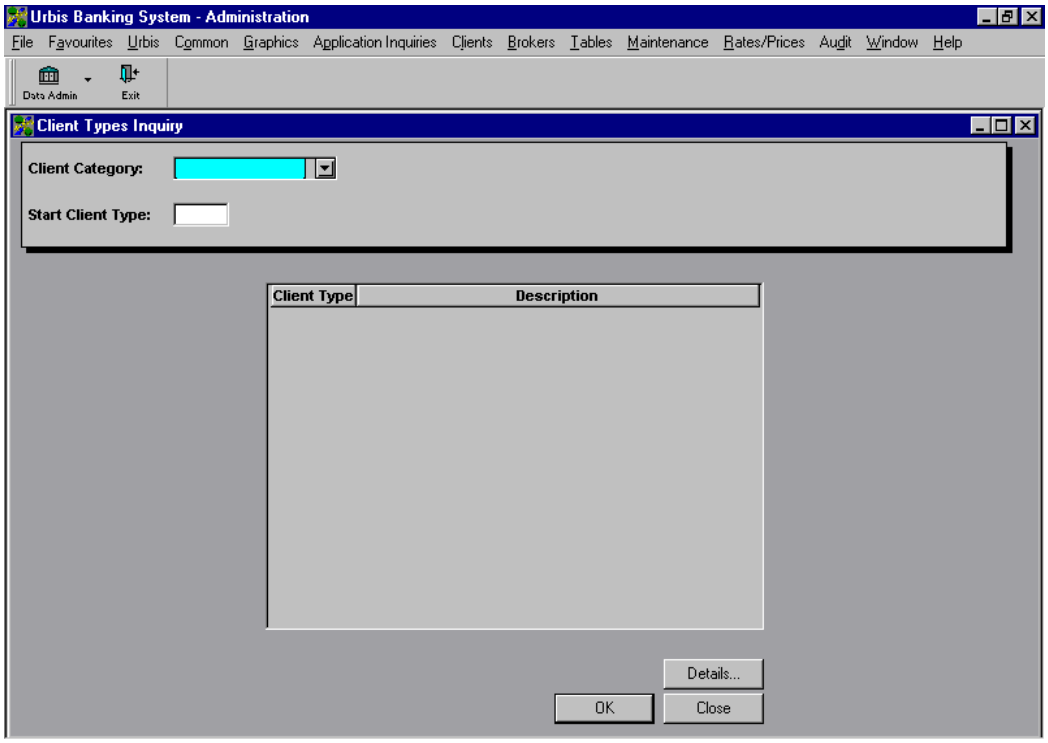

Figure 2–20. Client Type Inquiry screen

Name and Address Inquiry (NAMDI)

This inquiry shows the addresses for the selected client. It also shows the language to be used when communicating with that address. Up to nine addresses can be held for each client. To view the different addresses use the tabs marked Address 1 to Address 9, only three of these tabs are displayed at any one time. You can view the next set of three tabs by pressing the "**More**" button.

The following figure is an example of the Client Name and Address Inquiry (NAMDI) screen.

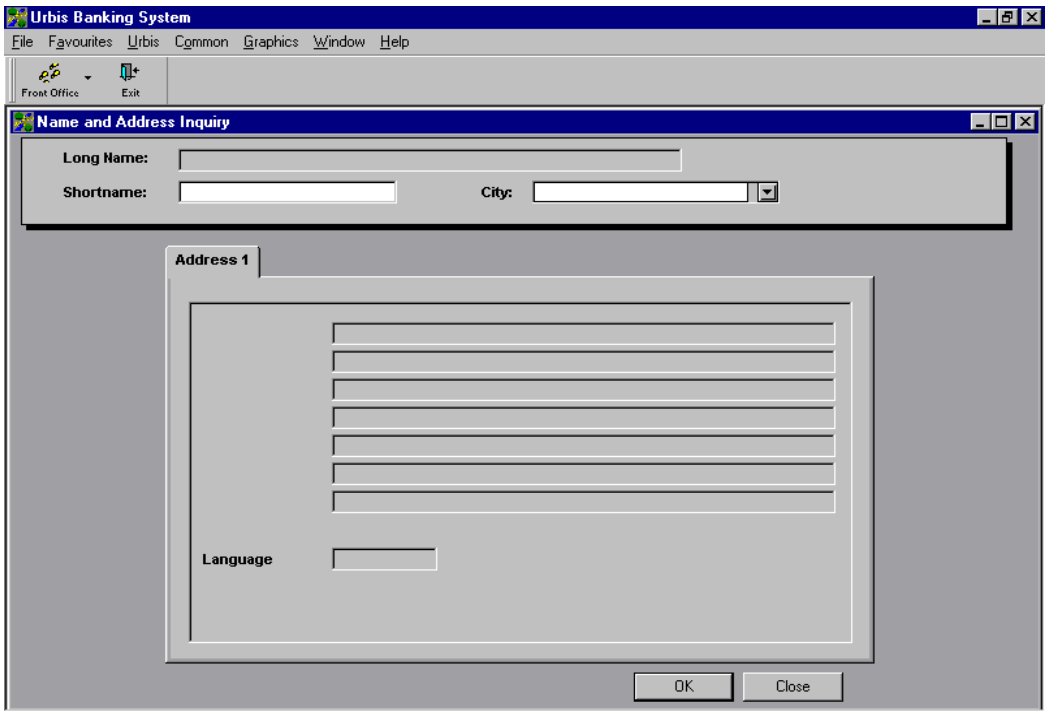

Figure 2–21. Name and Address Inquiry screen

Banking Client Master Inquiry (CLINI)

This inquiry provides a summary of non-retail client masters. The client masters are listed alphabetically by client shortname. If you enter an incomplete Client Shortname, details of all the non-retail client masters are displayed alphabetically from that shortname. For example, if you enter M in the Start Shortname field, clients are listed alphabetically from M.

To link to the Client Contract Summary (CNINQ) screen to see the contracts associated with a client, select a Client Shortname and City combination and click on **Contracts**.

If you have the Loans Administration module, it is also possible to link to the LA Facility Inquiry (LAFMQ) screen to see the facilities associated with a client, select a Client Shortname and City combination and click on **Facility Search**.

An example of this inquiry screen is given in the following figure:

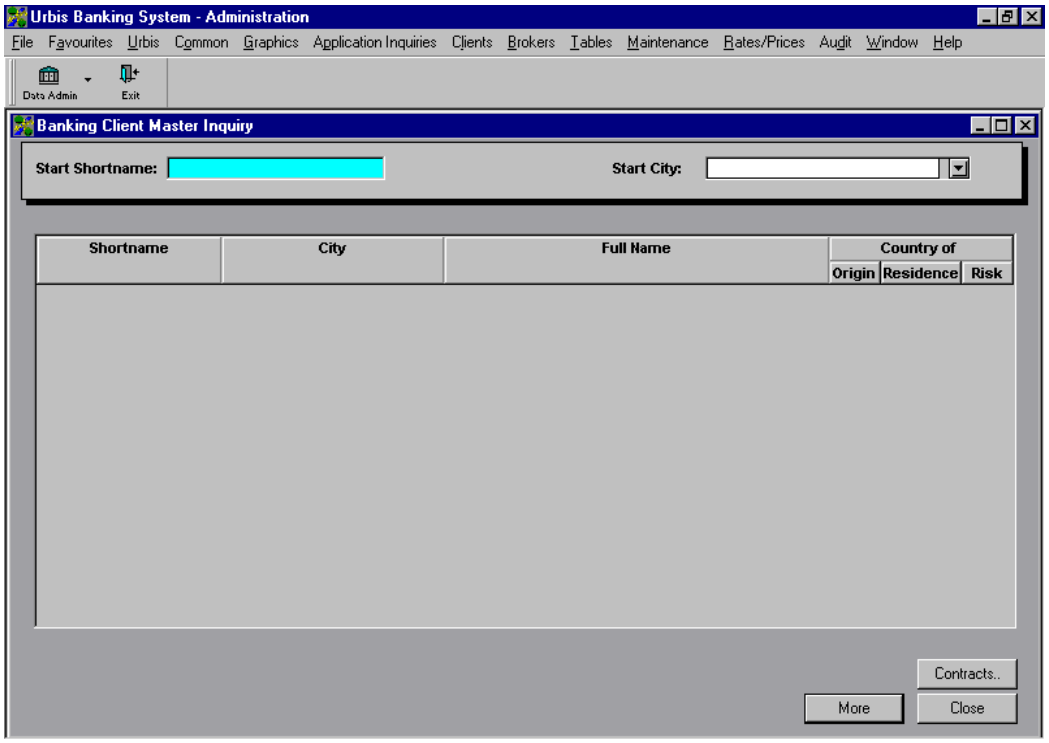

Figure 2–22. Banking Client Master Inquiry screen

Client Shortname Directory Search (CLSND)

This inquiry shows a list of non-retail clients. The clients are listed alphabetically by shortname. If you enter an incomplete Client Shortname, all clients are displayed which match at least part of the shortname. For example, if you enter MIDL, all clients are listed which start with MIDL. If none are found, all clients starting with MID are listed. This process continues until a client is found.

To show further details associated with a selected client:

Select a Client Shortname and City combination and click one of the link buttons:

- **Portfolio Inquiry** - Client Portfolio Inquiry (CLPFI) screen
- **Facility Search** - LA Facility Inquiry (LAFMQ) screen
- **Limits/Exposure** - Client or Country Limits (EXCLI)
- **Account Details** - Account Type Selection (PTCAT) screen.
- **Account Summary** - Account Summary by Client (CAASI) screen
- **Contracts** - Client Contract Summary (CNINQ) screen

***Note**: The link to the LA Facility Inquiry (LAFMQ) screen is only available if you have the Loans Administration module. The link to the Client Portfolio Inquiry (CLPFI) screen is only available if you have the Portfolio Management module.*

An example of this inquiry screen is given in the following figure:

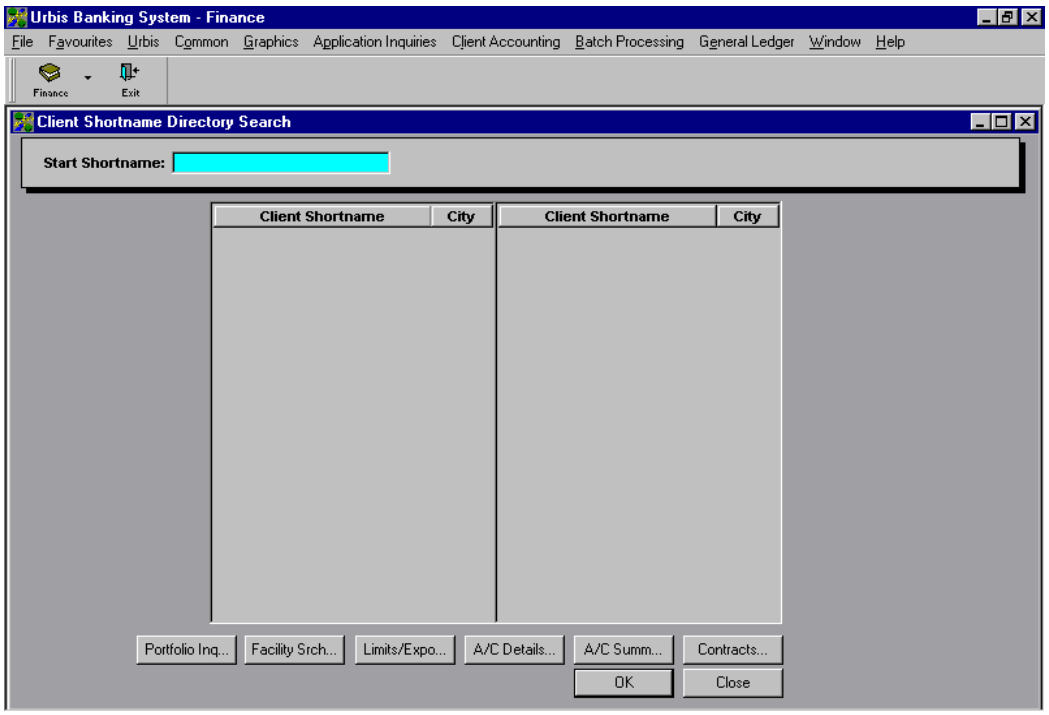

Figure 2–23. Client Shortname Directory Search screen

Deleting a Client

After entering a client's details, it is not possible to delete that client. However, you can change ‘Client Status’ to ‘Closed’ and set an ‘End Date’. The status can be set to ‘Closed’ only if the client has no accounts and no outstanding contracts. This can be done from the Client Details - Banking (CIWSL) screen.

If at a later date you want the client to become active again, simply return to the Client Details - Banking (CIWSL) screen and return the client status to "Active".

Client Administration Reports

The system contains various reports to help when maintaining clients and inquiring on their details. Here is a list of reports you may find useful:

- ADDRESSRI - Check Client Names and Addresses
  You should use this report when deleting a clients name or address from the system to ensure nothing depends on that name or address.
- CIPURGCLI - Client Incomplete Records Purge
  Use this report to remove client records that have been left at "Draft" status. It is important that incomplete records are deleted on a regular basis.

The above reports are described in the *Core On-Demand Reports Guide*.

- CLINMAREAS - Client Postal Areas
  This report lists clients by postal area.
- CLINMDTL - Client Details
  This report lists much of the information from many of the client and client account detail screens.
- CLINMLST - Client Masters List
  This report produces a summary list of clients sorted by internal client type.

The above reports are described in the *On-Demand Reports Guide*.

Section 3
Introduction to Client Accounts

Counterparty Accounts

The Client Accounts module processes counterparty accounts that are primarily used for clients involved in banking activities associated with low volume, high value transactions. Updates to such accounts are effected online and a comprehensive set of inquiries is available to show the current position of client accounts. The movement of funds to and from client accounts is also reflected in the general ledger immediately.

General Features of Client Accounts

Client accounts can:

- Receive postings as a result of:
  - Contract events
  - Batched postings
  - Standing orders
  - Interest settlement events
  - Charges
- Use the accounting models to update the general ledger
- Be the source account for payment of standing orders
- Update the general ledger online
- Reflect positions in the exposure models
- Be declared as a nostro or vostro account
- Post via the S.W.I.F.T. interface
- Back-value postings
- Apply account controls (holds on funds and stops on cheques drawn on an account)
- Provide functionality for Client Account Management Services (CMS), see Appendix C for more information. Available functions include:
  - Maintaining account balances using sweeping of funds
  - Analysing the balances, transactions and charges of marked accounts

Automatic Payments

The system provides the facility to process standing orders for client and general ledger accounts.

The beneficiary of the funds from a standing order can be a client of:

- Your own institution (internal)
- An external bank that is a member of the supported clearing system (domestic)
- An external bank that is not a member of the supported clearing system (foreign)

When a standing order is processed in favour of an external beneficiary, the client's account is debited and an entry placed in a file of clearing credits during overnight processing. There are separate files for domestic and foreign accounts.

You can use standing orders to sweep funds from one account to another.

Using a Client Account

Client Accounts can be set up for banking activities in any currency you use. All client account balances are maintained in the currency of the account. For consolidation and reporting purposes, amounts are converted to base currency using mid-market rates at run time of financial reports.

Each client account is linked to a particular accounting centre. You can specify the accounting centre when you create the account. If the accounting centre is not specified, the default accounting centre for your usercode is used.

In addition to client accounts, nostro (due from) accounts, vostro (due to) accounts and broker accounts can be entered.

The balance, average balance and turnover for a client account are maintained. The average balance figures are calculated during the end-of-day processing. A balance record is created for each value date on which there is a change in the balance. Old balance records are kept as part of the account history.

GL Backing Accounts

Each client account is associated with two General Ledger backing accounts. These determine where the account balances will be reported on the General Ledger.

On the General Ledger master, associated with the backing accounts, one of three contract types entered must be “client account”. The codes used to indicate contract types are defined at installation.

Client Account Balances

Three balances are maintained for each client account:

- Book Balance - the total balance posted to an account, including cheques or drafts in clearing and postings which have not yet come to value
- Value Balance - the total balance of an account, excluding all postings that have not come to value. The value balance is updated on each value date. Interest is calculated using this balance
- Available Balance - the balance available to be withdrawn by the client. This is the cleared balance minus any “held funds”

These balances enable a distinction to be made between balances on the posting date and the posting value date. Forward valued postings are stored until the value date is reached, then the value balance is updated.

Average Balance

The following information must be maintained to enable average balance information to be reported and used for accrual and statistical purposes:

- Days Credit - this is the total number of days during a profit period where a credit balance exists on an account at the close of business. A balance of zero is counted as a credit balance for this purpose.
- Days Debit - this is the total number of days during the period where a debit balance exists on an account at the close of business.
- Average Credit Balance - At any time during the period the Average Credit Balance is calculated by adding the close of business balances for every day the account has been in Credit during the period to date, then dividing this total by the “Days Credit” field figure.
- Average Debit Balance - As for Average Credit Balance, substituting “Debit” for “Credit”.

The net average balance for a period to date is calculated using the following formula:

$$\frac{(\textit{No. of Days in Credit})(\textit{Average CR Balance}) - (\textit{No. of Days in Debit})(\textit{Average DR Balance})}{\textit{Total No. of Days in Period-to-Date}}$$

Days where the balance is zero are considered as a day in credit, and are included in the net average balance for the period to date.

Balance Control Limits

You can enter up to four balance limits for each account. These limits are held in the same currency as the account. The four balance limits are:

- Overdraft Limit - the debit balance limit of the account. After the expiry date has passed, the limit becomes zero and any excess is printed on the exception report
- Minimum Balance - the minimum balance of the account
- Maximum Balance - the maximum balance of the account
- Fluctuation - the maximum balance movement allowed on the account from one day's closing balance to the next

If overdraft limits are exceeded, details are printed on the CAACOD - Client Account Overdraft List report and the CAJOURNAL - Client Account Postings Journal, see the *On-Demand Reports Guide* for details.

It is possible to apply the overdraft limit to batches of postings entered via the batch posting screens, see "Entering Batched Postings" in Section 4, Client Account Screens for further details. If a debit posting in the batch will cause the overdraft limit to be exceeded, then it will not be possible to close the batch until the overdraft limit is increased.

Withholding Tax

Withholding tax affects deposit accounts held by clients liable to this tax. If a client is liable to withholding tax, all interest settlement amounts must be paid net of withholding tax.

Account Controls

The system provides the facility to stop a specific cheque being drawn on an account. Furthermore you can hold a specific portion of an account balance to cover a specific transaction or contract. Several holds can be placed on each account.

Interest Conditions

For each interest bearing account you can define interest conditions. These conditions can apply to both debit balances and credit balances.

Special interest conditions can be set up for a particular account or general interest conditions can be set up for a backing general ledger account. Where the interest conditions apply to a general ledger category, any account in that category can use the interest conditions specified.

You can also define an interest condition of “Netted” for an account that has a Related Grouping Account. In this case, the system uses the interest conditions set up on the Interest Conditions (INTSM) screen for the Related Grouping Account. See “Interest Netting to a Group Account”, later in this section, for more details.

For accounts that have interest condition, you can choose one of two methods for applying interest, defined on the Interest Conditions (INTSM) screen.

- **Simple**. Interest is calculated on the principal on a daily basis. On the defined settlement date, the accumulated interest is applied to either the principal account or a specified interest settlement account. Subsequent interest calculations are then performed on the new account balance and accumulated for settlement at the end of the next settlement period.
- **Compound**. Interest is calculated and applied to the account on a daily basis.

Interest is accrued at one of two times for each day, defined on the Client Account Static Details (WACCM) screen,

- **First**. Interest is accrued at the end of the **first** online day during end-of-day processing and during every end-of-day until the day you close it; no interest is accrued on the day of closure itself
- **Last**. Interest is accrued during the first beginning-of-day processing after the account is opened (at the start of the second day) and during every beginning-of-day after that including the **last** day the account is open

Interest Rates

Interest rates can be applied in the following three ways:

- As a fixed rate
- As a rate variation added to a base rate
- As a rate variation subtracted from a base rate

Interest rates are always positive and up to 999 base rates are available for each account currency.

Interest is calculated daily on the value balance.

Interest Levels

The interest rate charged or paid on an account can be based on its balance. Up to four interest levels can be defined for this purpose. Each level has a maximum amount up to which an interest rate or rate variation is applied.

Interest levels can be applied in two ways:

- On an all-up basis, the interest rate for the level in which the balance falls is applied to the whole balance.
- On a slice basis, the interest rate for each level is applied to the part of the balance that falls in that level.

A flat rate of interest can also be applied.

Each interest bearing account can have a minimum and maximum interest rate associated with it. If the interest rate on an account is linked to a base rate and the gross interest rate falls below the minimum, the minimum rate is used. If it exceeds the maximum, the maximum rate is used.

Credit account interest conditions are entered gross of withholding tax.

Interest Settlement

Interest on client accounts is settled periodically and need not be settled at the end of each profit period. For example, interest can be settled quarterly on an account with three months accruals included in the settlement figures. The interest settlement posting is created on the day before the date specified in the Interest Frequency Settlement field for the client account, and has a value date equal to the Interest Settlement Date. If this day falls on a holiday or weekend, interest is settled on the next working day.

Interest can be posted to the same client account or a different account. It can also be held in a suspense account for payment or receipt. Postings are made via the accounting models that are set up at installation. For more information about the accounting models, see the *Guide to Setting Up*.

You can post a net interest settlement amount if credit and debit interest settlement is made to an account on the same day and the settlement frequencies are the same.

You can also enter a “Guaranteed Amount” on the Interest Conditions (INTSM) screen. In the event of credit interest this will be the minimum interest payable to the client. For debit interest this will be the maximum interest chargeable to the client.

For clients liable to withholding tax, this is calculated on the actual interest settled to an account. Therefore, if a client has minimum guaranteed interest and the calculated accrual is less than this, the minimum guaranteed interest amount is settled and withholding tax is calculated on this amount.

Interest rates and settlement amounts are reported gross of withholding tax.

For foreign currency accounts the withholding tax amount is converted to base currency using the mid-market exchange rate.

Interest Netting to a Group Account

If you maintain more than one account for a single client, you can group accounts together and settle total credit interest and total debit interest into a separate account for that group. Interest is applied on the accumulated debit balance and the accumulated credit balance of the group as opposed to each group member.

The group account is called the “Group Account for Interest Netting”. The accounts that have interest settled into a group account for interest netting are called “netted” accounts. The interest condition for these accounts is “netted”.

Note: *Postings to netted accounts are made during the normal business day and duplicate postings to the group accounts are made during the overnight process. Interest is calculated on the balance in the group accounts and is then settled to the settlement account.*

How Interest Conditions are Applied

Interest is only calculated on the accumulated debit balance and the accumulated credit balance of the Group Account for Interest Netting. Since netted accounts cannot accrue interest separately they do not require separate interest conditions to be set up for them.

The interest conditions for interest netting accounts are set up on the Interest Conditions (INTSM) screen.

When you change interest conditions for Real accounts from Special or General to Netted:

- The change is only effective from the date of amendment
- An interest settlement to settle all outstanding debit or credit interest on the account is automatically generated for the date of the amendment

If an account has netted interest conditions attached to it you can only change these conditions by closing the account and opening a new one.

All postings made to netted accounts are duplicated for the Related Grouping Account.

Back-valued postings for a netted account must have a value date equal to or greater than the date on which netted interest conditions were specified for it. If the back-valued date is before this date for a manual posting an error message is displayed; if the back-valued date is before this date for an automatic posting, then the date on which netted interest conditions were specified for the account is used as the value date.

How to Set Netted Interest Conditions for Groups of Accounts

To set up netted interest conditions for client accounts:

1. Set up backing general ledger accounts using the GL Account Definition Maintenance (GLADM) and General Ledger Account Details (GLSTM) screens, or change an existing backing general ledger account using the CA Backing Account Change (CABAC) screen. For a netted account these must be real accounts, but for interest netting accounts they must be memo accounts
2. Set up Interest Conditions for the Group Account for Interest Netting on the Interest Conditions (INTSM) screen
3. Create a Group Account for Interest Netting on the Client Account Maintenance (CAHDR) and Client Account Static Details (WACCM) screens
4. Create the client accounts, specifying:
   - The Group Account for Interest Netting
   - The interest conditions (Netted) for the credit and debit account

Cost of Funds

Cost of funds is an optional feature, designed for internal use between different accounting centres in an institution. It allows an accounting centre to credit/debit an internal funds transfer rate for the use of its funds. This functionality allows you to better understand the profitability of each accounting centre, taking into account both external and internal transactions.

One method of charging an internal funds transfer rate is through a Funding Account. Funds are posted to the account via the accounting models, from deals entered into by an institution. The cost of funds is then charged to the account as interest rates, in a similar way to how interest rates are applied to client accounts. The profit or loss associated with a particular product will be ascertained by the relevant funding account set up for the product.

A funding account is defined in the same way as a normal client account. You must first establish internal clients, and then create accounts for these clients. The accounts must then be designated as funding accounts using the Funding Account field on the Client Account Static Details (WACCM) screen, and cost of funds rate defined on interest conditions applied using the Interest Conditions (INTSM) screen.

After funding accounts have been created, they must be linked to the appropriate accounting centres and product types, using the Funding Account Maintenance (PRFAM) screen. This screen allows you to define in which account the funds for a particular product type and accounting centre will be stored. How this is set up will be dependant on your institutions requirements, for example, all the funds from one accounting centre could be located in one account, or every department could have its own account. The Funding Account Maintenance (PRFAM) screen is described in the *Guide to Setting Up*.

For a full description of Cost of Funds, refer to the *Guide to Setting Up*.

Cost of Funds for Client Account Balances

The cost of funds functionality within the system can also be applied to calculate the cost of funds for client account balances. This does not affect the interest condition set up for the client, who will not know about the internal cost of funds settings. The accounting centre in charge of the client account will be charged or receive money for the funds used to cover that account. The charge is calculated using a Base Rate Number, and an Add on Margin, in the same way as interest is applied to client accounts.

Account History

History records are created both when an account changes and at the end of each period. They are retained for a number of days specified at installation and include such information as:

- The interest paid or received each day and withholding tax amounts
- The debit and credit interest conditions which apply to the account
- The base rate for the account and the date of any change to it
- The withholding tax rate

The period history shows the position of the account on the morning of the profit day before any postings have been made to the account for that day. It includes any interest accrued on the previous night's balance.

Postings to Client Accounts

Postings can be generated in the following ways:

- From contract transactions
- From interest settlements to client accounts
- Using the CA Backing Account Change (CABAC) screen
- From other systems through Kernel
- Manually entered credits, debits or control postings
- From standing orders
- From charges
- From cashier/official cheques
- Loaded into the system from an outside source as cash wastes

Postings entered manually can be entered in batches or as cash wastes. If entered in batches, they must be from the same accounting centre. When a batch has been completed, the expected totals must agree with the totals calculated by the system.

The following types of direct posting can be entered in batches:

- Debit - to debit a client account
- Debit cheque - for cheques drawn on a client account
- Debit control - to reverse incorrect credits to override account blockings and to make interest adjustments
- Credit - to credit a client account
- Credit control - to reverse incorrect debits to override account blockings and to make interest adjustments
- Paired Transactions - a debit or credit to a client account paired with a balancing payment to a contra account. This type of posting is only relevant if you are using the Client Account Management Services functions, described in Appendix C of this guide.

Bulk credit and debit postings can be made to client accounts where all postings are cash. These postings are batched and need not have the same value date.

Postings to client accounts can be entered with a value date that is before or after the posting date. The value date is the date on which interest, if any, is calculated for the posting. Forward-valued postings update the book balance and cleared balance (if not “in clearing”) immediately. The value balance available on the account is updated on the value date.

Postings for client accounts can be made from one accounting centre to another but reversal postings must be made at the accounting centre where the posting originated.

Postings to the backing General Ledger accounts reflect the book balances on the client accounts.

If a specified client account is not available when account entries are posted through the accounting models, the postings are sent to the real or memo error suspense account for the general ledger master associated with that contract, or client. In the case of contracts only, if the error suspense account for the GL master is also unavailable, the postings are sent to the system error suspense accounts set up on the System Parameters (SPMTR) table.

Cross-Accounting Centre Postings

In a multi-accounting centre environment there is a requirement to generate postings between accounting centres, for instance when a cash credit is received at one accounting centre for a client account held at another accounting centre.

The cross-accounting centre accounting facility is specified at installation. This enables the automatic generation of postings to inter-accounting centre control accounts in the General Ledger.

For example, if a Cash Credit is received at Accounting Centre B for a client account that is maintained at Accounting Centre A, the following postings are generated:

1. DR to contra (cash) account, held at Accounting Centre B
2. CR to inter-accounting centre control account, held at Accounting Centre B
3. DR to inter-accounting centre control account, held at Accounting Centre A.
4. CR to Client Account, held at Accounting Centre A
5. CR to backing GL account, held at Accounting Centre A, for the client account

A further facility specified at installation enables all cross accounting centre postings to be routed through inter-accounting centre control accounts held at the head office accounting centre. In this case further postings would be generated as follows:

6. CR to Accounting Centre A head office control account, held at Head Office
7. DR to Accounting Centre B head office control account, held at Head Office.

The Head Office inter-accounting centre control accounts for each accounting centre are defined on the Accounting Centres Maintenance (ACNTM) screen. The inter-accounting centre control accounts for source and destination accounting centres for cross accounting centre postings are specified on the Cross Accounting Centre Rules (ACRLM) business table.

Bulk Loading of Cash Wastes

The system has the capability of uploading bulk postings created in another system into its database. To do this, you must run the report LDBLKPOST - Load Bulk Postings, this will access and read the file containing the postings. The postings contained inside will be converted into the system format, and entered into the database as cash wastes. The report output contains details of the postings converted, and any postings that could not be converted.

Back-valued Postings to Client Accounts

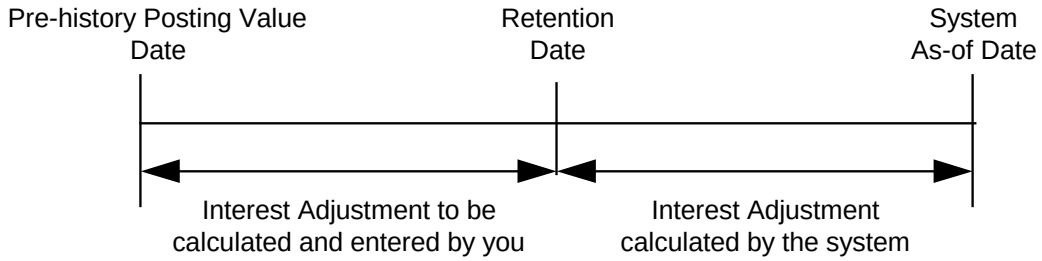

A posting made in the current period with a value date earlier than the as-of date is referred to as a back-valued posting. An interest condition change or a base rate change may cause back-valued postings to be made. Interest may be recalculated from the value date of the back-valued posting to the as-of date. The history details and account balances are also updated.

***Note**: Back-valued postings before an interest settlement event may result in interest earned being different from that earned on the back-value date. This is because the interest settled would have been different, and if capitalised on the account would have changed the subsequent daily accrual figure. To compensate for the loss of interest that would have been earned from the latest settlement date if the back-valued posting had been made on time, a manual adjustment must be posted.*

Pre-history Postings

Postings to client accounts that are entered with a value date prior to the current retention date are known as “pre-history postings”.

When entering a pre-history posting you should enter a manual interest adjustment figure to reflect interest accrual between the posting value date and the current retention date. The interest adjustment figure for the period between the retention period and the system as-of date is calculated by the system. The following diagram represents this:

***Note:** If the Retention Date precedes the “earliest history date” a warning message is printed, informing you that an extra interest adjustment calculation may be required to cover interest accrual between the retention date and the earliest history date.*

You can only reverse a pre-history posting which was originally entered as such, not one which has merely slipped beyond the retention date.

Hold Funds

Funds can be held on a client account to cover, for example, a cheque or payment on a contract. When the associated transaction or contract has been processed, the hold is cancelled. Any number of holds can be placed on each account.

Stopped Cheques

You can stop either a single cheque or a range of cheques. When a cheque is stopped, any attempt to debit the cheque is rejected. Once a cheque has been presented, it cannot be stopped.

Client Account Statements

Interim and non-interim statements are produced. The format of statements is defined at installation. See the *Core On-Demand Reports Guide* for further details of statements.

Interim statements are produced on demand. Non-interim statements are produced at intervals specified for each account. Up to 9 copies of each statement can be produced for up to 9 client addresses.

Interest Statements

Client interest statements are produced either automatically or on demand. These list the interest payments and charges for each account over specified accounting periods, and show how interest is calculated.

Account Charges

Account Charge conditions can be specific to a single account or to a group of accounts within a accounting centre. Using the Client Account Static Details (WACCM) screen you can specify whether or not a client account is liable to charges. The frequency and scale of such charges depends on the account type and usage.

For client batch postings entered using the Paired Client Account Transaction Maintenance (CATRM) screen, different charge conditions apply. These are called Immediate Charges and are described in Appendix C, Client Account Management Services.

Standing Orders

You can use standing orders to automate payments to and from client accounts. The beneficiary of an automatic payment can be another account held within the system or an external beneficiary.

Payment Dates and Amounts

When setting up a standing order a first payment date and a final payment date, together with a frequency trigger, can be specified for interim payments. The transfer amounts can be either fixed or variable. Variable transfer amounts can be used to sweep the full balance (this can be capped) or a portion of the balance that is over a specified amount to another account. You can also transfer the amount that is required to bring the balance of another account up to a specified amount. The first and last payment amounts can be different to the interim payment amounts. The final transfer amount can be open-ended and the final payment date can either be changed or left blank. If it is left blank the standing order events occur at profit period end.

Cross-Currency Transfers

Standing orders can be single or cross-currency transfers. The exchange rate (counter, mid-market or market) to be used for a cross-currency transfer is specified when the standing order is set up and can be amended at any time prior to the payment date.

Multiple Transfers Using Standing Orders

You can specify all accounting centres and/or all currencies for a single standing order. This enables transfers on either a “many to one” or a “many to many” basis, and so avoids the need for repetitive data entry.

Nostro and Agent Combinations for Client Accounting

The accounts between which payments are made are automatically identified, on the basis of the nostros and agents that have been set up for each particular contract giving rise to the notice or payment. Default nostro and agents may be allocated according to rules set up on the Nostro Settlement Defaults (NSDFM) and the Agent Settlement Defaults (AGDFM) tables. If compensating payments are being made through a Nostro, the payments can be netted so that no actual payment is made.

A nostro account is defined as “our account with another bank” (the correspondent). In order to correctly reflect any money held with another bank, a copy of the nostro account is maintained in its own books.

Nostro accounts are set up using the Nostro Details (NSTRO) table. They are identified by a nostro number and currency or a nostro name and currency.

An agent is defined as a “third party responsible for paying or receiving funds on a contract”.

Agents are set up using the Agent Details (AGNTM) table. They are identified by an agent nickname.

For details of how to set up nostros and agents, see the *Settlements Guide.*

Nostros and Agents are specified when entering certain contracts under the Client Accounting module. In order that instructions for the transfer of funds are correctly generated (using either the S.W.I.F.T. network, if applicable, or printed messages), the system ensures that only valid combinations of nostros and agents can be specified for each contract.

Table 3-1 lists and describes valid combinations of entries in the nostro and agent fields. Note the following:

- A nostro can be identified by **either** its name **or** number.
- The use of an Agent does not necessarily indicate that an account relationship exists between the bank and the agent. For example settlement messages may be sent by the bank to its pay nostro, with information for onward transmission to the client's agent. Similarly, settlement messages may be received from the client's agent by the bank's receive nostro, with information for onward transmission to the bank.
- Standard settlement instructions can be entered to use the default settings for the nostro and agent for the contract. These instructions can be applied to the contract by entering 'SSI' in the required Receive/Pay Nostro/Agent fields. Following acceptance of the contract, whenever it is displayed whether for maintenance or inquiry, the entered field will display 'SSI' **not** the agent name/number or nostro/number. 'SSI' cannot be entered for an agent or nostro if the default has not been defined.

  When SSI has been entered for an agent or nostro, the default agent and nostro details can be displayed by double clicking on the 'SSI' entry. This facility is only available when you are using the Graphic User Interface (GUI). For fuller details, see the *Core Functions and Inquiries Guide.*

***Note**: The default settings for both the agent and the nostro can be entered using other methods. Entering the number or name for the default agent or nostro will display the entered detail for the agent or nostro. Leaving the agent or nostro blank will result in the system applying the default, if available, or 'T' (To be advised).*

Table 3–1. Entries in Nostro and Agent Fields

Nostro	Agent	Description
Number/Name	Name	Your correspondent and the client's agent are different. The agent's nickname is entered in the Agent field.
Number/Name	Number/Name	The client's agent is one of your correspondents: • The nostro number/name in the Nostro field can be different from the nostro number/name in the Agent field. • If your correspondent and the client's agent are the same, the nostro number/name entered in the Nostro field can refer to the same nostro as that entered in the Agent field.
Number/Name	S	Your correspondent and the client's agent are the same. (This is equivalent to 2. above).
Number/Name	U	There is no agent.

Nostro	Agent	Description
Number/Name	T	Your correspondent is known; the client's agent is to be advised. If a S.W.I.F.T. message would normally have been sent, this combination will result in it **not** being sent - printed messages will be generated instead.
V	Vostro A/C No.	Posting is to be made using a vostro. The Agent field identifies the account to be used.
D	Name	Posting is to be made directly from/to your bank to/from the client's agent. You can enter either an agent's nickname or a nostro number/name in the agent field.
D	U	There is no agent. Posting is to be made directly from your bank to the error suspense account. When the receive account is known, use the batch postings facility to effect the transfer.
D	T	Posting is to be made directly from your bank to a client's agent who is to be advised. If a S.W.I.F.T. message would normally have been sent, this combination will result in it **not** being sent - printed messages will be generated instead.
T	Name	Your correspondent is to be advised; the client's agent is known. You can enter a nostro number/name in the Agent field. This combination will result in S.W.I.F.T. messages **not** being sent - printed messages will be generated instead.
T	U	Your correspondent is to be advised and the client doesn't have an agent. This combination will result in S.W.I.F.T. messages **not** being sent - printed messages will be generated instead.
T	T	Both your correspondent and the client's agent are to be advised. The settlement message will be sent directly to the nostro, when entered. This nostro/agent combination should be used with care when payment takes place at the start event. This combination will result in S.W.I.F.T. messages **not** being sent - printed messages will be generated instead.
C	T	No payment is to be made, as the payment amount is to be compensated by a second contract.
SSI	SSI	The contract is to use the default nostro and agent defined using the Agent Settlement Defaults (AGDFM) screen and the Nostro Settlement Defaults (NSDFM) screen.

Nostro	Agent	Description
Number/Name/ SSI/blank	SSI	The contract is to use the default agent defined using the Agent Settlement Defaults (AGDFM) screen.
SSI	Number/Name/ SSI/Blank	The contract is to use the default nostro defined using the Nostro Settlement Defaults (NSDFM) screen.
Number/Name/ SSI	NSTD	Settlement instructions specific to the contract are to be used for the agent. Enter 'NSTD' in the "Their Receive Agent" field and clicking "Settlement Instructions" will link to the Non Standard Settlement Instructions (NSTDM) screen.

Any of the Agent identifiers shown in Table 3-1 can be replaced by the exact S.W.I.F.T. address of the agent. Only do so if you are certain of the address, which **must** be entered using an '@' symbol followed by the appropriate 8 or 11 character S.W.I.F.T. address.

Only the following formats should be used:

- @BBBBCCLL
- @BBBBCCLLXXX

Where:

BBBB	Four alphabetic characters representing the S.W.I.F.T. bank identifier
CC	Two alphabetic characters representing the S.W.I.F.T. country code
LL	S.W.I.F.T. location code
XXX	Three alphabetic/numeric characters representing the S.W.I.F.T. branch code (if applicable)

Euro Related Information

Economic and Monetary Union (EMU) is a process by which certain countries in the European Union are converting their national currencies (also called "in" currencies) into a single European currency called the Euro.

The system supports this conversion process fully for all currencies and all phases of the conversion (see "Euro Related Information" in the *Core Functions and Inquiries Guide* for more information).

Section 4
Client Account Screens

Introduction

This section describes the screens used for creating and maintaining a client account. The following functions, and the screens necessary to carry them out, are described:

- Selecting a Client Account
  - Account Identification (CAIDI)
- Setting up and maintaining client account details:
  - Account Type Selection (PTCAT)
  - Client Account Maintenance (CAHDR)
  - Client Account Static Details (WACCM)
  - Interest Conditions (INTSM)
  - Client Account Definition Maintenance (CAADM)
  - Client Accounts for Client Type (CAACM)
  - Client Account Generation for Client (CAGCM)
  - CA Backing Account Change (CABAC)
  - Close Client Account (CACLS)
- Entering batched postings:
  - Batch Header (BHEAD)
  - Client Account Credit (CACR) and Client Account Debit (CADR)
  - Client Account Credit Control (CACCN) and Client Account Debit Control (CADCN)
  - Client Account Debit Cheque (CADCQ)
  - Batch Close (BCLOS)
  - Cashier/Official Cheque Issue (CHEQA) and Cashier/Official Cheque Payment (CHEQP)
- Entering cash postings:
  - Cash Wastes (CASHW), used to enter bulk cash postings to client and general ledger accounts
- Setting up and maintaining charges for client accounts:
  - General Purpose Narratives table (GNARR)
  - Charge Codes Maintenance (CACCM)
  - Account Charge Static Details (CACHM)

- Client Account Maintenance (CAHDR)
- Client Account Static Details (WACCM)
- Account Charge Review and Post (CACRP)
- Account Charges Screen Defaults (CACSM)

Note: *The General Purpose Narratives (GNARR) screen is described in the* Guide to Setting Up.

- Setting up and maintaining standing orders:
  - Standing Orders Input (SOSTM)
  - SO External Payments (SOPAY)

The above screens are described in Section 5 “Automatic Payments”.

- Setting up and maintaining controls:
  - Hold Funds (HOLDM)
  - Stopped Cheques (STOPM)

For each of the client accounts described in this section, the following is provided:

- A description of its use
- An example of the screen

A full description of each screen's fields and entries to them is given in Section 6, “Definition of Field Names”.

See the *Starter’s Guide* for a description of how to access and use screens.

Notes: *Before a client account can be opened, a client must exist. See Section 2, "Client Administration Screens" for details of how to set up a client.*

Client Account Postings

‘Non-retail’ type accounts can be used to receive postings from both retail and banking transactions. This means that postings to banking client accounts can be generated in the following ways:

- From contract transactions
- From interest settlements to client accounts
- From charge settlements to client accounts
- Using the batched postings screens
- From automatic payments due to standing orders
- Via an interface with S.W.I.F.T.

Selecting a Client Account

Account Identification (CAIDI)

This screen is displayed when you attempt to perform a process that requires details of a client account to be transferred from screen to screen. Enter an account number and currency. The system displays the screen that you requested with details for the account already displayed.

For example, if you want to amend the accounts of a client whose account number you are aware of, you select the Client Account Maintenance (CAHDR) screen and the Account Identification (CAIDI) screen will be displayed. On the Account Identification (CAIDI) screen you enter the Account Number, select the currency from the dropdown list and click **OK**.

Urbis displays the Client Account Maintenance (CAHDR) screen.

Note: *If you know a client's name but do not know the Account Number, you can use the Client Account Balance (CIBAL) screen to list the client's accounts. This should allow you to determine which account number you need to enter on the Account Identification (CAIDI) screen.*

An example of this screen is given in the following figure:

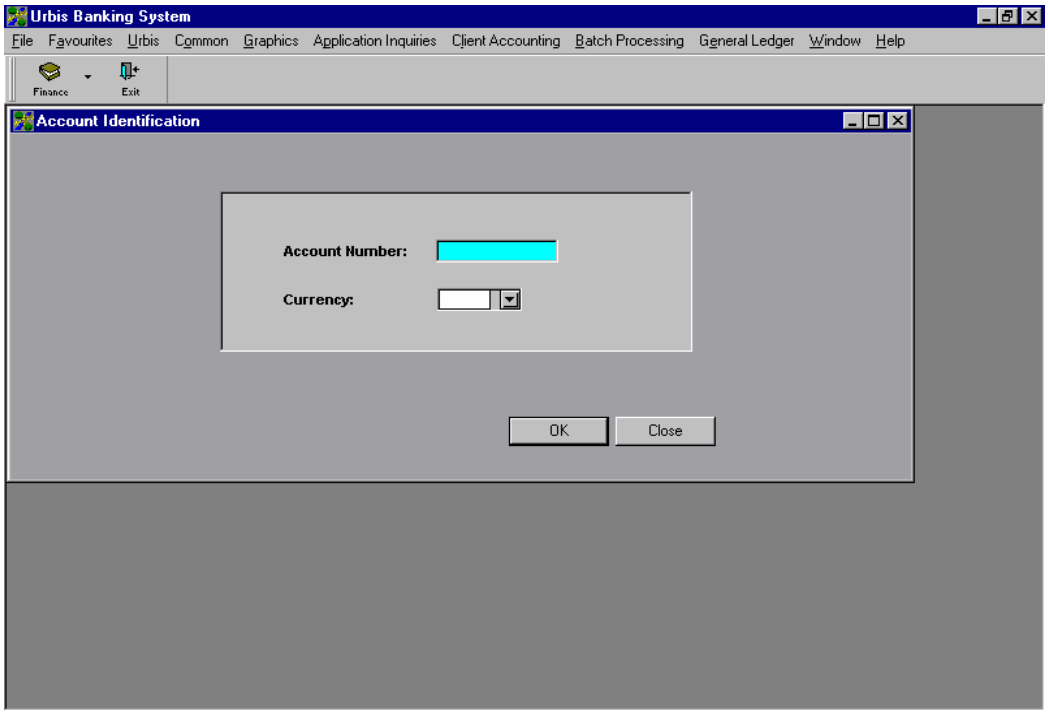

Figure 4–1. Example of Account Identification screen

Opening a Client Account

The first action in opening a client account is to select the type of account you wish to open. This process is done on the Account Type Selection (PTCAT) screen. When you select this screen, the system triggers the Selecting a Client Account process to enable you to select the client for whom you are opening the account (this is detailed earlier in this guide). After a client is selected, the system displays the first of two screens that are used to record the account details.

When the account has been opened without interest conditions, you can set conditions specific to the account. The following diagram shows the screens used to open client account:

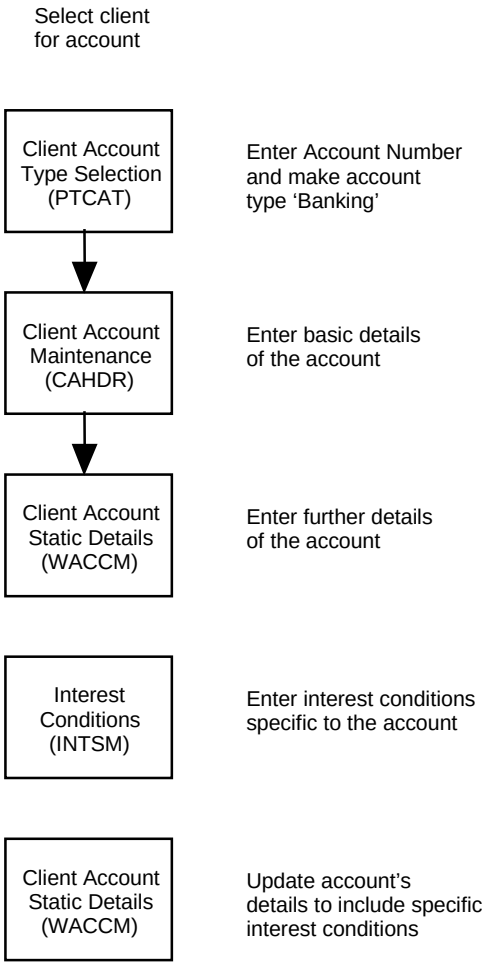

Figure 4–2. Client Account Opening Screens

You can add additional details, necessary for the Client Account Management Services functionality on the Client Account Management Services Details (CAEXM) and the Management Services Transactions for Analysis (TRCKM) screens. See Appendix C for details on these functions.

Account Type Selection (PTCAT)

When opening a client account, you must select the category of account that you wish to open. This determines the sequence of screens that you must complete to open the account. These screens are displayed automatically. Only "Banking" category is relevant to non-retail accounts.

When you select the Account Type Selection (PTCAT) screen, the system initiates the Selecting a Client process to enable you to identify the client for whom you want to open an account. When you have completed this process, the Account Type Selection (PTCAT) screen is displayed with the selected client pre-filled.

You must complete the 'Client Account Number' field. The account number can be up to twelve characters in length (letters or numbers). (If the account is for an external Trade Finance client, the account number must not exceed eleven characters). You must also enter the Client Account Category. In the case of non-retail accounts, select 'Banking' from the drop down list. By using the blueprint parameter BP-PRFX-DIGITS, you can specify how many numbers of a client number must be in their account number. For example setting this blueprint parameter to 2 forces you to include two digits of the client number in all the account numbers of that client. See the *Guide to Setting Up* for more information.

When you have completed the Account Type Selection (PTCAT) screen, the system presents the Client Account Maintenance (CAHDR) screen.

The following figure shows an example of the Account Type Selection (PTCAT) screen.

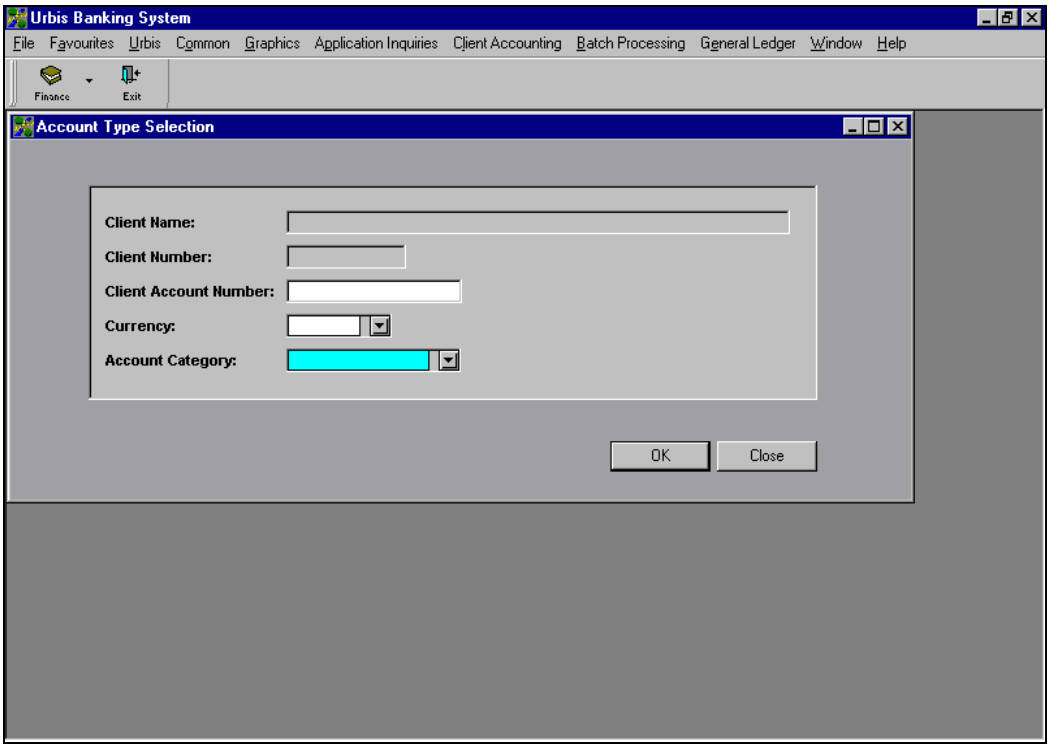

Figure 4–3. Account Type Selection screen

Client Account Maintenance (CAHDR)

The Client Account Maintenance (CAHDR) screen is the first of two screens used to create and amend client accounts.

Before you can create a client account, the Client for the account must have been created (see "Adding Client Details" in Section 2 of this guide).

You can create three types of client account:

- Real - a single client account on whose balance interest is calculated
- Group - a client account which is one of a group of accounts whose interest is calculated on the basis of the overall balance of the group
- Memo - a memorandum account that receives contingent postings for tracking a position that you may hold with a particular client

You cannot delete an account using the Client Account Maintenance (CAHDR) screen. Instead, use the Close Client Account (CACLS) screen to close the account.

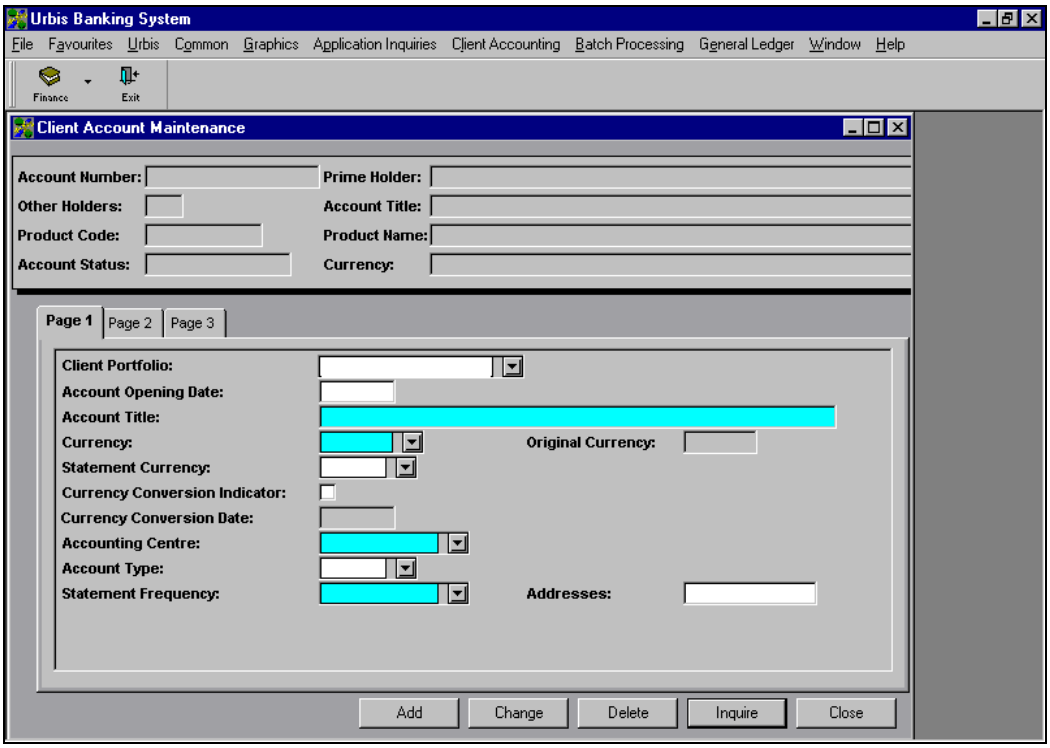

Each client account is linked to an accounting centre. If you do not specify an accounting centre for the account, the default accounting centre for your usercode is used. Nostro accounts must be held at the head office.

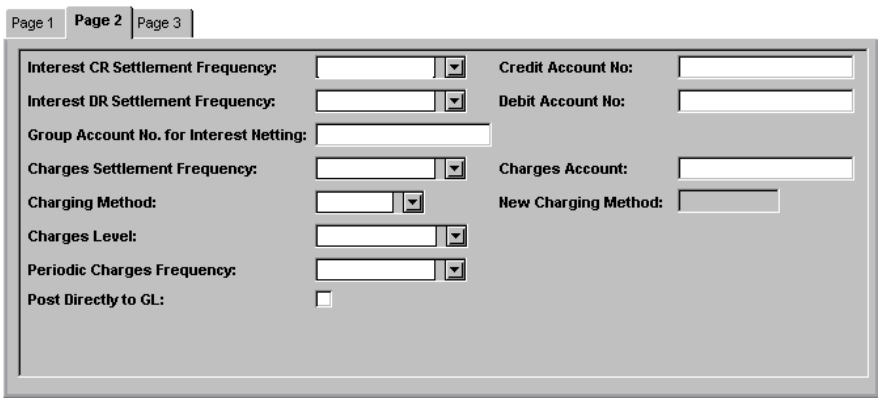

It is recommended that you set the 'Post Directly to GL' field to Yes. This means that any postings that are made to the account during the online day will be reflected in the general ledger immediately.

Note: *The following fields are only relevant to retail accounts: Charges Settlement Frequency, Charges Account, Charges Level, Charging Method, Periodic Charge Frequency. The Account Opening Date field must not be used as an entry field for non-retail accounts, the opening date for these accounts is generated automatically when the Client Account Static Details (WACCM) screen has been completed successfully.*

The fields "Stock Exchange", " Corporate Actions" and "Dividends" are only relevant to Asset Management. If you do not utilise Asset Management, they may be removed, using the Screen Text Maintenance (STEXT) screen (see the Guide to Setting Up).

The following figure shows an example of the Client Account Maintenance (CAHDR) screen. The input fields are split among three tab pages.

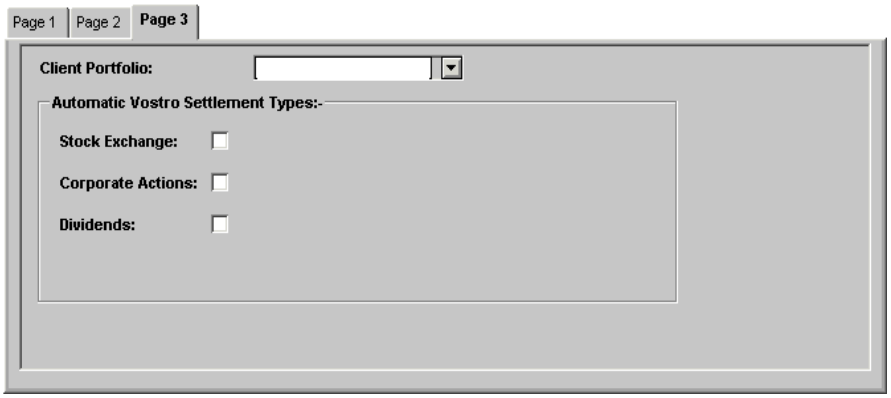

Figure 4–4. Client Account Maintenance screen

Client Account Static Details (WACCM)

This is the second screen that you must complete when opening a client account. When you are opening an account the status is set to 'Active' by default. This means that the account is available for use immediately after the Client Account Static Details (WACCM) screen is complete. An account is opened with a zero balance.

You can enter interest conditions which are either specific to each client account or which apply to a collection of accounts. These conditions are set up on the Interest Conditions (INTSM) screen.

When you are setting up a client account that requires specific interest conditions, do not set the interest conditions until the remainder of the Client Account Static Details (WACCM) screen has been completed successfully. At this stage, you must move to the Interest Conditions (INTSM) screen and set up the appropriate conditions for the account. You can then return to the Client Account Static Details (WACCM) screen and apply the specific conditions to the account.

Using the "Interest Suppression" field you can specify whether or not interest rate changes are to be printed on the statements for that client. The "Statement" Type field can be used to indicate whether statements for the client are to be printed or generated as S.W.I.F.T. messages. A statement is only sent by the S.W.I.F.T. network if the following conditions are met; a S.W.I.F.T. address has been entered for the client (under the Client Details – Banking (CIWSL) screen), the "Vouchers Sent" field indicates that vouchers are not enclosed, and the "Statement Collected" field indicates that there is no statement collection.

Where you are using an external system to interface to the system, you can specify the external databases on which this client account is held; currently an interface is available for a Trade Finance system.

Note: *Where the Client Account is a due from (nostro) account, the client must have a S.W.I.F.T. address.*

To amend the backing general ledger credit and debit accounts, use the CA Backing Account Change (CABAC) screen.

From the Client Account Static Details (WACCM) screen, you can link to other screens to add further client account details. Click the **Interest Conditions** or the **Extra Details** button to go to the Interest Conditions (INTSM) or the Client Account Management Services Details (CAEXM) screen respectively. The Client Account Management Services Details (CAEXM) screen is described in Appendix C.

The following figure shows an example of the Client Account Static Details (WACCM) screen.

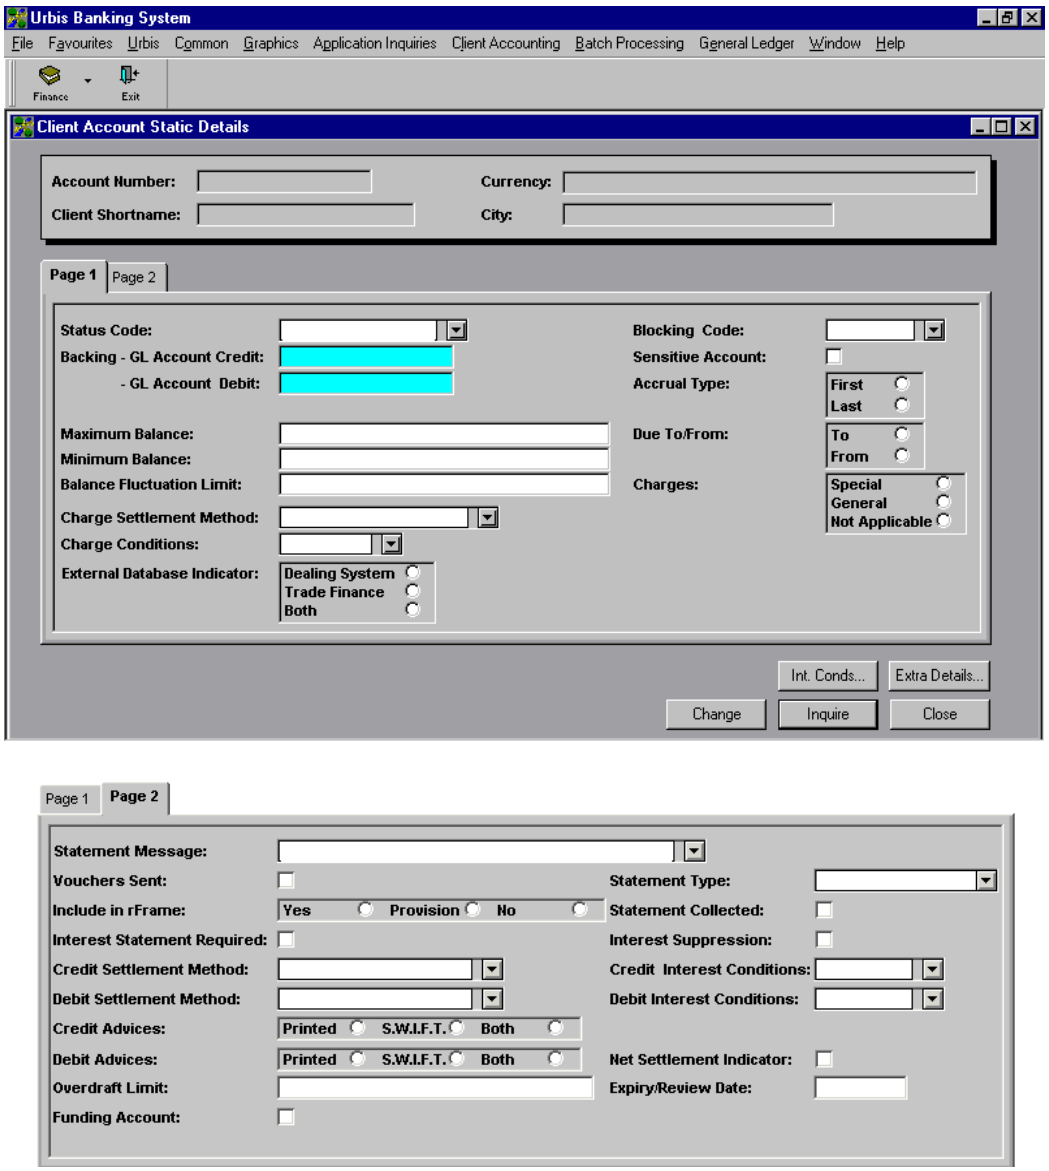

Figure 4–5. Client Account Static Details screen

Net Settlement of Interest

For an account that has the same credit and debit interest settlement frequencies, credit and debit interest are settled on the same day. This interest may be netted and settled by one posting to the account.

To post a net interest settlement amount to an account, complete the following steps:

1. Set up the accounting models for Net Interest (NI). Refer to “Setting Up Accounting Models” in the *Guide to Setting Up*.
2. Specify the account, for which interest is to be settled as a net amount, by switching on the Net Settlement indicator.
3. Ensure that the interest settlement frequency is the same for both debit and credit interest settlement.

How to Create a Group Account for Interest Netting

Group accounts are used to calculate interest based on the overall balance of multiple accounts for a single client. They are created and maintained using the Client Account Maintenance (CAHDR) and Client Account Static Details (WACCM) screens.

To set up a group account for interest netting, the following conditions must be specified on the Client Account Maintenance (CAHDR) screen:

- ‘Account Type’ must be set to Group
- ‘Group Account Number for Interest Netting’ should be specified

The following conditions must be specified on the Client Account Static Details (WACCM) screen:

- Interest Conditions (credit and debit) can be General or Special but not Netted
- Account status must be ‘Active’
- Backing general ledger accounts (credit and debit) must be memo accounts

A Group Account for interest netting can only be closed when all the netted accounts relating to it have been closed.

How to Create a Netted Account

The Client Account Maintenance (CAHDR) and Client Account Static Details (WACCM) screens are used to create and maintain netted accounts. These belong to an account group and contribute to the balance of a related grouping account, for the purpose of interest calculation.

To set up a netted account, the following conditions must be specified on the Client Account Maintenance (CAHDR) screen:

- The ‘Account Type’ field must be set to ‘Real’
- The ‘Group Account Number for Interest Netting’ field must be entered (it must be an account that exists for this client or group of clients and is active)
- The ‘Currency’ of the group account for interest netting must be the same as the currency of the netted account
- Interest Settlement Frequencies (credit and debit) must be left blank

Finally, the Interest Conditions (credit and debit) that are specified on the Client Account Static Details (WACCM) screen must be Netted.

Interest Conditions (INTSM)

This screen is used to enter details of the interest conditions you want to apply to a client account.

The following figure shows an example of the Interest Conditions screen.

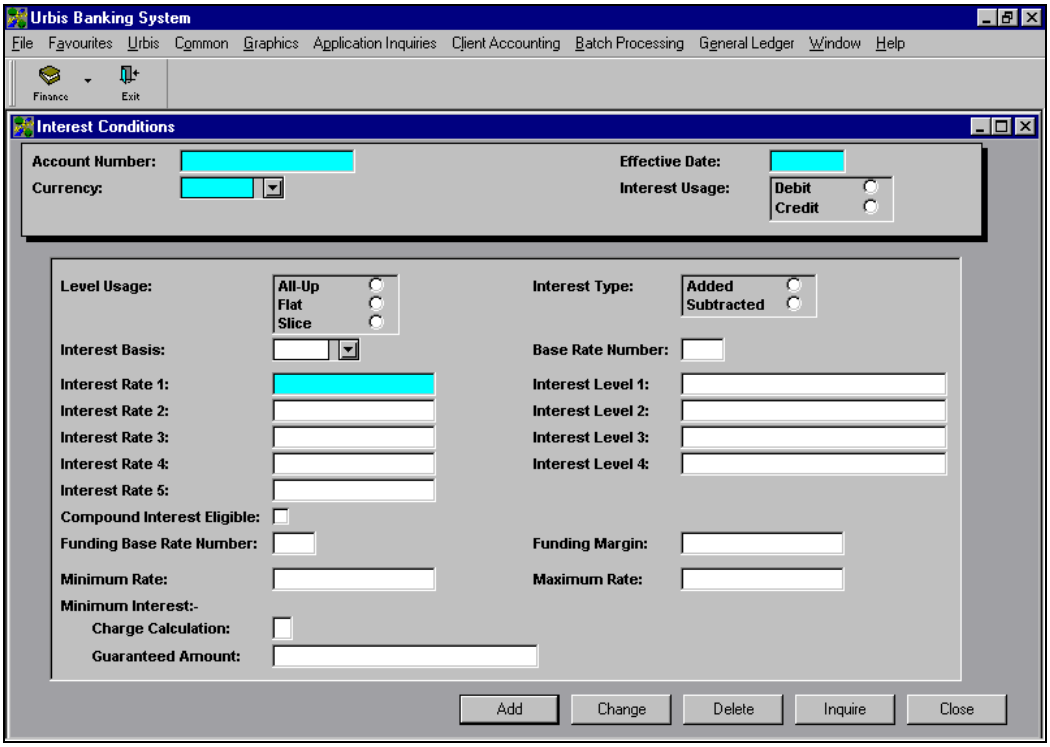

Figure 4–6. Interest Conditions screen

Guaranteed Amount

The Guaranteed Amount can be entered on the Interest Conditions (INTSM) screen. With credit interest this will be the minimum interest payable to the client. For debit interest it will be the maximum interest chargeable to the client.

Level Usage

If the account is using the 'Simple' method of calculating interest, the way in which interest can be charged or paid on an account is controlled by the entry you make in the “Level Usage” field. The interest rate can be based on its balance. Up to four interest levels can be defined for this purpose. Each level has a maximum amount up to which an interest rate or rate variation is applied.

Interest levels can be applied in three ways:

- On an **All-Up** basis, the interest rate for the level in which the balance falls is applied to the whole balance
- On a **Slice** basis, the interest rate for each level is applied to the part of the balance that falls in that level
- On a **Flat** rate basis, where Interest Rate 1 is used as the flat rate.

If the account is using the 'Compound' method of calculating interest, then interest levels are not applicable, and a Flat rate must be used.

Each interest bearing account can have a minimum and maximum interest rate associated with it. If the interest rate on an account is linked to a base rate and the gross interest rate falls below the minimum, the minimum rate is used. If it exceeds the maximum, the maximum rate is used.

Client Account Definitions

You can speed up the entry of new client accounts by using client account definitions and the automatic client account generation process. Client account definitions provide a default set of data. You can link a client account definition to a client type. When using client account generation, the account data is defaulted from the account definition provided for that client type. The default data can be changed if required.

Similar definitions can be established for portfolios. The screen used to provide the link between the client type and portfolio in this case is the Client Accounts for Client Type (CAACM) screen, which is the same screen as used for linking client types and client account definitions.

The following diagram shows the screens used for automatic generation of client accounts:

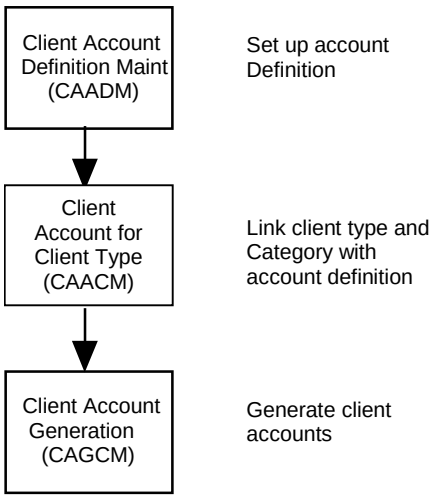

Figure 4–7. Client Account Automatic Generation Screens

Client Account Definition Maintenance (CAADM)

Use this screen to define a group of accounts with similar characteristics. Each group must have an Account Definition ID and currency, which are then used to identify the group. When adding a new definition, credit and debit general ledger backing accounts, Maximum Balance, Minimum Balance, and Statement Frequency must be defined, but all other information on this screen is optional. Accounts do not have to belong to a group; this is an optional facility to make adding new accounts easier.

It is recommended to set the ‘Post Directly to GL’ field to Yes for non-retail banking accounts. This means that any postings that are made to the account during the online day will be reflected in the general ledger immediately.

***Note**: The fields “Stock Exchange”, “ Corporate Actions” and “Dividends” are configurable, using the Screen Text Maintenance (STEXT) screen (see the Guide to Setting Up). If not configured, the "Settlement Types" tab of this screen is blank. These fields are only relevant for Asset Management.*

The following figure shows an example of the Client Account Definition Maintenance (CAADM) screen.

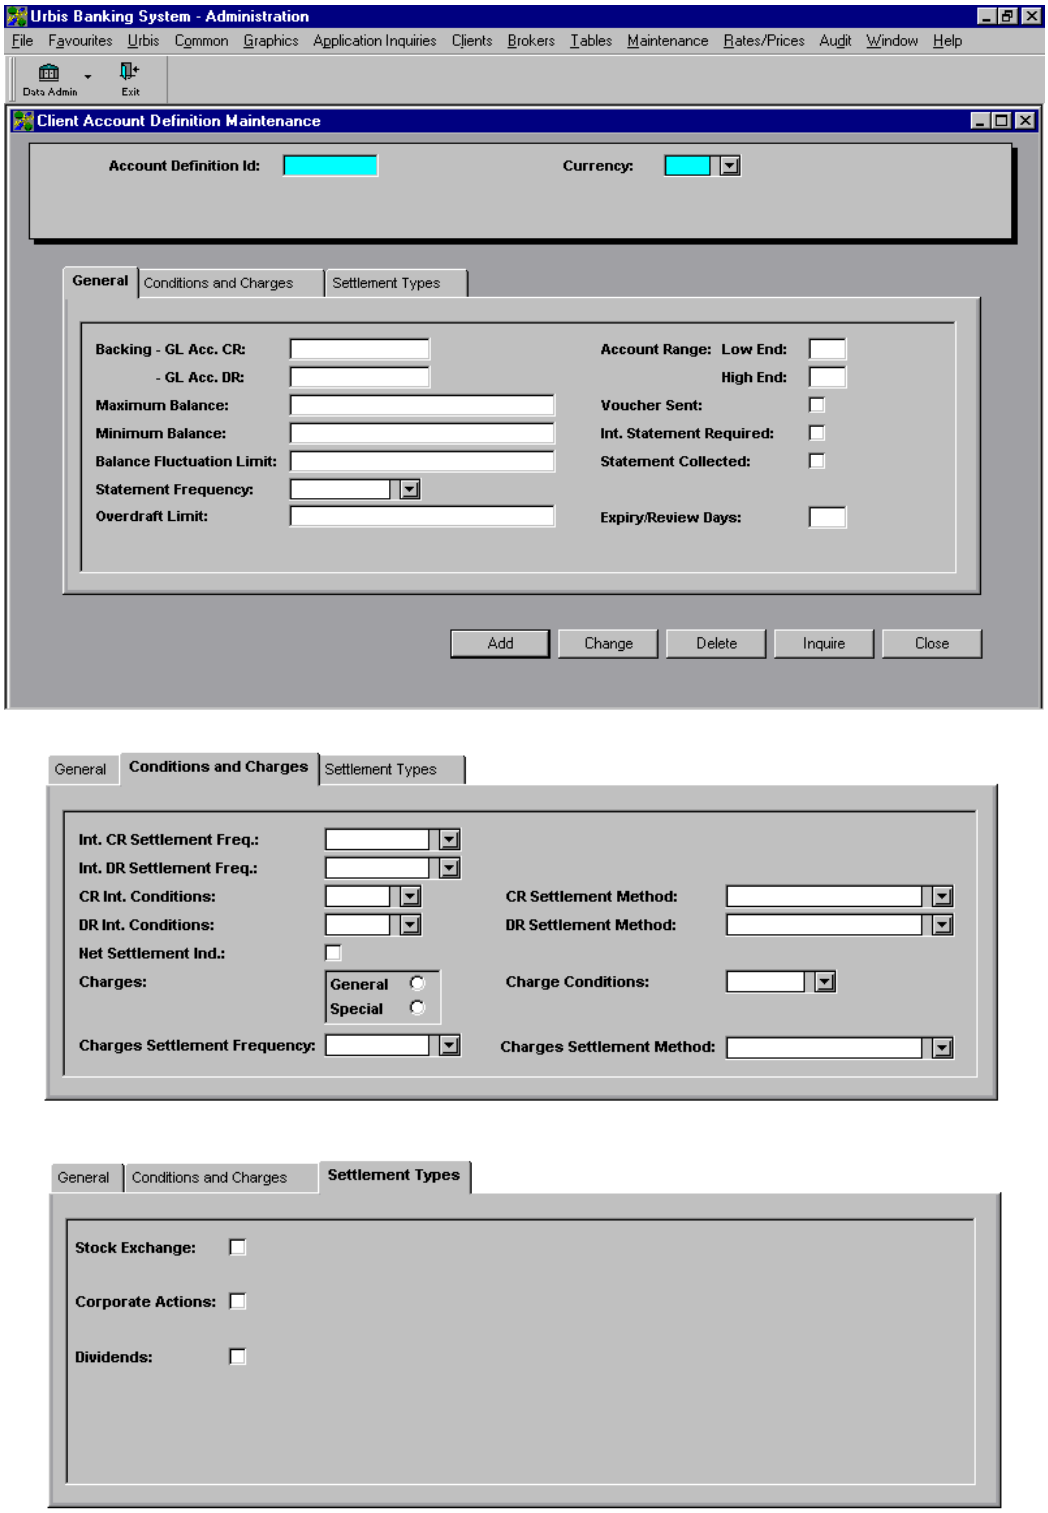

Figure 4–8. Client Account Definition Maintenance screen

Client Accounts for Client Type (CAACM)

Use this screen to define a relationship between a client type/category combination, and an account or client portfolio definition. The relationship you define is used as the default for clients of a particular type and category when generating a new account or client portfolio. The screen may be accessed directly or via a link from the Client Types Maintenance (CICTM) screen. If the link is used, the fields Client Type, Client Category, Description, and relating records (when existing) are pre-filled.

To associate a new Client Type and Client Category combination with an Account or Portfolio Definition ID, enter a code previously set up on the Client Account Definition maintenance (CAADM) screen in the Account/Portfolio Definition ID field. Set the Account/Portfolio Indicator as appropriate, and enter the Currency. Finally, set the Update Flag, switch "On" the Update Flag field and click **Add**.

To dissociate a Client Type and Client Category combination from an Account or Portfolio Definition ID, click the Update Flag tick box against the line for that combination, then click **Delete**.

The following figure shows an example of the Client Accounts for Client Type (CAACM) screen.

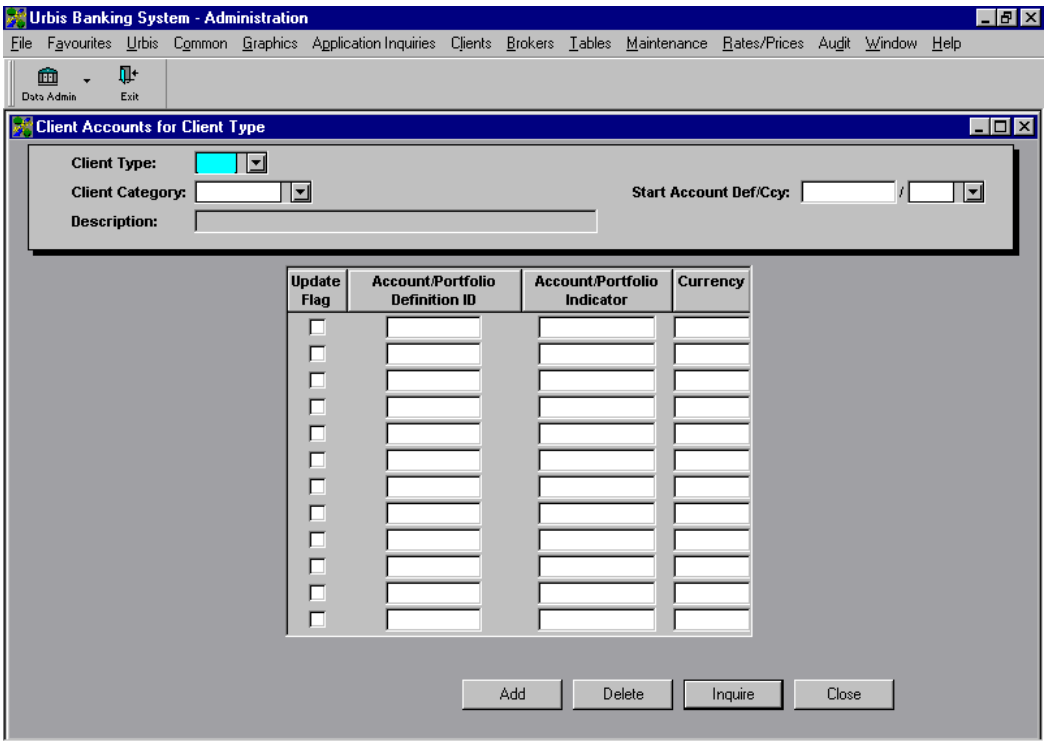

Figure 4–9. Client Accounts for Client Type screen

Client Account Generation for Client (CAGCM)

Use this screen to generate client accounts automatically. Automatic client account generation can only be used for new clients. Default data is taken from the account definition and currency combinations identified on the Client Accounts for Client Type (CAACM) screen. Defaulted account definitions and currency combinations are based on the client shortname's type and category. One new account is generated for each Account Definition attached to the new client.

The Client Account Generation for Client (CAGCM) screen may be accessed directly or by linking to it from the Client Details - Banking (CIWSL) screen. If you use this link, the fields Client Shortname, Client City, Account ID and Currency are pre-filled. From this screen, you can generate accounts automatically as follows. Click on **Add** to display the account definitions and the next account number for each definition. Enter a "Long Name" for each account, and click on **Add** to generate the accounts.

The data is initially displayed with the Update Flag set against each line. Before generating the accounts, the Update Flag may be unset against a particular account if it is not required.

The account number field is generated automatically, and consists of two parts. The first part is determined by the setting of blueprint parameter BP-PRFX-DIGITS (see the *Guide to Setting Up)* and consists of a number derived from the client number. The second part is the next account suffix number available from within the range defined on the Client Account Definition Maintenance (CAADM) screen.

Accounts are created with the status of Active, unless interest conditions or charges have been specified against the account definition on the Client Account Definition Maintenance (CAADM) screen. If so, the accounts have the status of Unopened and you should link to the appropriate screen as follows:

For Interest Conditions:

Interest Conditions are indicated by the tick box being set on against the account. Click on **Interest Conditions** to link to the Interest Conditions (INTSM) screen.

For Charges:

Charges are indicated by the tick box being set on. Click on **Charges** to link to the Account Charges Static Details (CACHM) screen.

You can also enter account numbers on this screen manually if required. To do this, amend an existing line on the Client Account Generation for Client (CAGCM) screen to show the required account information. Set the Update Flag on, and click **Add**.

The following figure shows an example of the Client Account Generation for Client (CAGCM) screen.

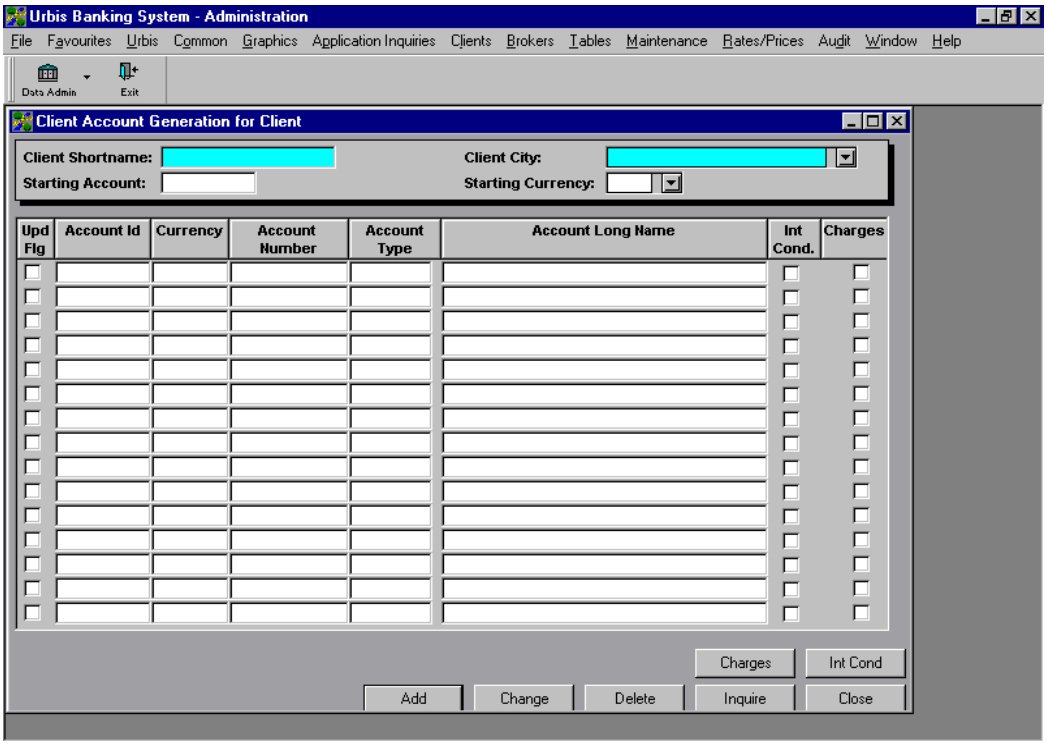

Figure 4–10. Client Account Generation for Client screen

Changing Account Details

If you want to change any details on the main account screens, you must select an account first. The Client and Account Selection process is initiated automatically when you open any of the following account details screens:

- Client Account Maintenance (CAHDR)
- Client Account Static Details (WACCM)
- Interest Conditions (INTSM)

You cannot change the backing general ledger account fields that appear on the Client Account Static Details (WACCM) screen. If you want to change the backing accounts, use the CA Backing Account Change (CABAC) screen.

CA Backing Account Change (CABAC)

Backing general ledger credit and debit accounts are entered on the Client Account Static Details (WACCM) screen. The CA Backing Account Change (CABAC) screen is used to change these backing accounts for a selected client account and currency.

To change the backing accounts for an account, enter the selected client account number and currency, then click **Ok**.

The "Old" details are displayed and you can update these by making an entry in the "New" backing credit and debit account fields; postings are then created for these accounts. If you enter an effective date of today, the change is effected immediately.

Note: *You cannot amend a backing account more than once each day.*

The following figure shows an example of the CA Backing Account Change screen.

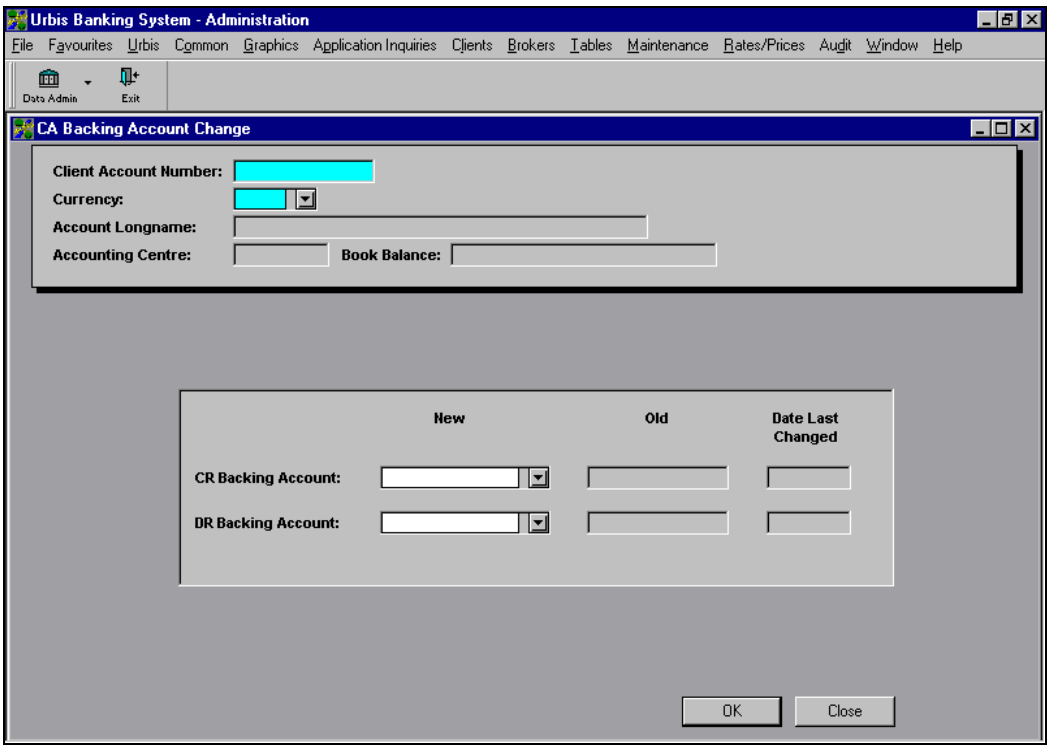

Figure 4–11. CA Backing Account Change screen

Closing a Client Account

A single screen is provided to handle account closure. This is the Close Client Account (CACLS) screen. It gives details of the current status of the account with regard to balance, charges and interest outstanding and enables you specify a destination account for the final balance.

When an account has been closed using the Close Client Account (CACLS) screen, the account is purged after the period you have specified using the retention period parameter CASTM (see "Retention Parameters" in the *Guide to Setting Up*). Note that when an account has been closed the account details cannot be changed.

Close Client Account (CACLS)

This screen is used to close an active client account. If any forward valued postings exist for the account you are prevented from closing it until all postings have come to value. Furthermore, if it has an outstanding balance, interest to be debited or credited or if account charges are to be levied, another (transfer) account must be identified to which these can be posted prior to closure.

If the account being closed has been used for standing orders, then another method must be established to enable these to continue. For example, you can set up an alternative account to deal with them.

Before closing an account, the 'Charge Calculation' and 'Guaranteed Amount' values - set up on the Interest Conditions (INTSM) screen - must be set at '2' and '0' respectively. This ensures that the correct interest is settled during end-of-day processing.

Interest settlement accounts can be closed, but note that any postings to such an account when closed will be redirected to the error suspense account.

When you have entered details of the account being closed you will be asked to confirm that you are closing the account you intended to close. Once you have closed the account you cannot make amendments to it.

The following figure shows an example of the Close Client Account screen.

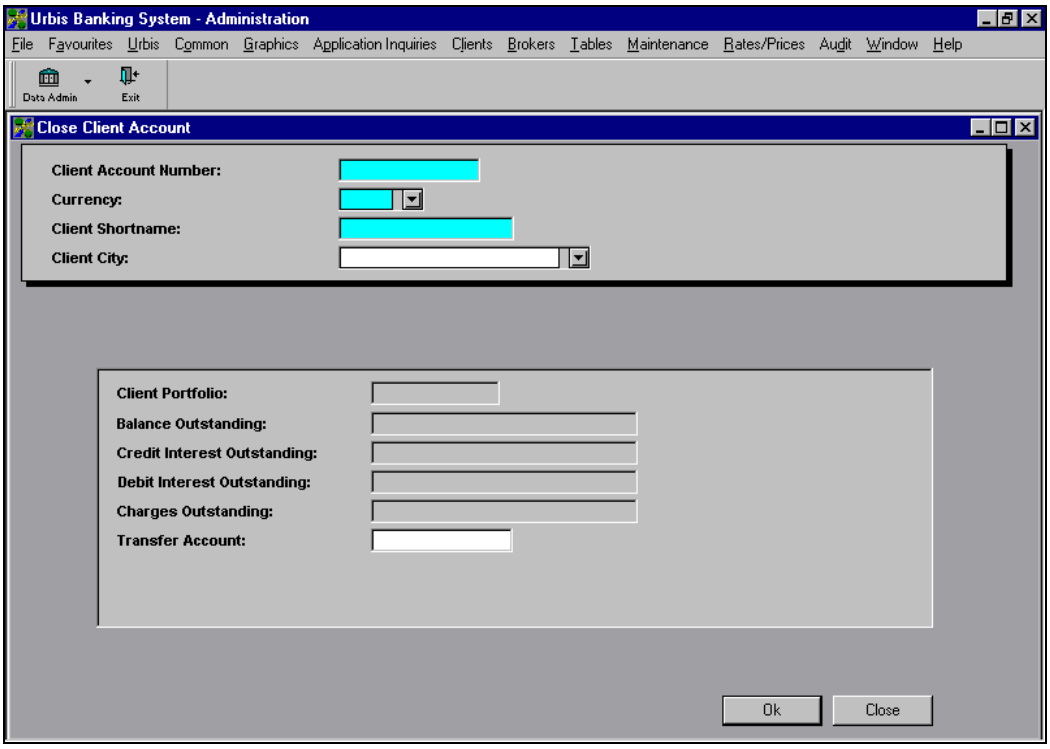

Figure 4–12. Close Client Account screen

Outstanding Balances and Interest

The balance outstanding is displayed automatically and posted, on-line, to the transfer account.

The interest outstanding is displayed automatically. Outstanding interest is settled overnight through the normal settlement process of the Client Account Beginning of Day (CABOD) report. If interest is outstanding, the following message is displayed:

OUTSTANDING INTEREST WILL BE SETTLED OVERNIGHT

In this case, interest will be settled during the next OVERNIGHT run, irrespective of the settlement frequency originally set up for the account.

If the account being closed is also the account to which interest settlement was normally made, then the interest settlement (on closure) must be sent to the transfer account. This is done automatically by changing the settlement method on the Client Account Maintenance (CAHDR) screen and settlement account entries on the Client Account Static Details (WACCM) screen. If interest is normally settled in another valid client account or error suspense account, settlement (on closure) continues to that account.

Transfer Account Field

If outstanding balances, debit/credit interest or any charges exist then a separate transfer account, to which these are to be posted, must be identified before an account can be closed. Otherwise this is not a mandatory field.

The transfer account is validated as follows:

- It must be a real client or general ledger account
- It must not be a backing or control general ledger account
- It must not be blocked for both credits and debits
- It must not be blocked for credits if a credit transfer is being made
- It must not be blocked for debits if a debit transfer is being made

Charges Outstanding Field

Charges outstanding are displayed automatically. Account charges are settled into the settlement account determined by the charge settlement method on the Client Account Maintenance (CAHDR) screen.

Effect of Closure

After a client account has been closed, automatic postings in respect of the account (generated by contracts, for example) are made to the error suspense account. If the account being closed is an interest settlement account, any postings for the account are made to the error suspense account.

On closure of an account, the system automatically updates the following values on the Client Account Maintenance (CAHDR) and Client Account Static Details (WACCM) screens:

- The credit and debit interest settlement frequencies are set to daily
- The statement frequency is set to daily
- The interest statement required is set to ‘automatic’ if it was previously 'request'

On closure of an account, the following reports should be run under their default options:

- CASTMTS - Client Account Statements, which produces on-request statements for specific client accounts. A statement is produced for each account whose frequency is “due” or “overdue”. The account status, for closed accounts, is displayed accordingly.
- CAINT - Client Account Interest Statements, which produces on-request interest statements for accounts, identifies those accounts that are closed.

If further copies of statements are required for closed accounts, the appropriate Run Time options must be used.

Entering Batched Postings

The following screens are used to enter batched postings:

- Batch Header (BHEAD) screen, used to open a batch
- Client Account Credit (CACR) and Client Account Debit screens (CADR), used to enter credits and debits to client accounts
- Client Account Credit Control (CACCN) and Client Account Debit Control (CADCN), used to control credits and debits to client accounts
- Client Account Debit Cheque (CADCQ), used to enter cheque details
- Management Services Transaction Maintenance (CATRM) to enter a paired transaction and Management Services Transaction Narratives (PNARM) to enter the narratives related to a paired transaction
- Batch Close (BCLOS) screen, used to close a batch

If blueprint parameter BP-OVDR-CONT has been set to 'Y' (see "Blueprint Parameters" in the *Guide to Setting Up*), the client account's overdraft limit is applied to batches of postings entered via the batch posting screens. If a debit posting in the batch will cause the overdraft limit to be exceeded, then it will not be possible to close the batch until the overdraft limit is increased using the Client Account Static Details (WACCM) screen.

Paired transactions are part of the Client Account Management Services (CMS) functionality. CMS allows enhanced control over the postings entering an account, including the ability to track the paired transactions been posted, and the ability to check the balance of an account before posting. See Appendix C for a full description of these functions.

Note: *The Cashier/Official Cheque Issue (CHEQA) and Cashier/Official Cheque Payment (CHEQP) screens cause postings to be raised that are given a batch reference, but these screens do not require manual batch opening and closing.*

Batch Header (BHEAD)

Use this screen to open a batch of postings intended for client accounts or general ledger accounts. A batch must contain postings made in the same accounting centre. The number of the batch is assigned automatically, and appears on all screens within the batch.

The “GL contra account” can only be entered for client accounts. If entered, it is then defaulted on all subsequent posting screens in the batch; it can be amended as required but it cannot be left blank. Balancing postings are automatically made and the total credit and debit posting amounts do not then have to balance.

If the “GL contra account” is not entered the total credit and debit amounts must balance.

After entering the credits and debits, the batch must be closed using the Batch Close (BCLOS) screen. If the batch does not balance, it may be closed “unreconciled”.

Notes: *A batch will automatically be closed unreconciled if the terminal is logged off whilst the batch is still open.*

Unreconciled batches will be purged, by the POSTLST - Batch Postings List report, after the expiry of the user defined period, defined by the retention period parameter BATCH-HIST (see “Retention Parameters” in the Guide to Setting Up*).*

A batch can only be deleted if it is open and unreconciled. If the batch header is deleted, all the associated postings are also deleted.

Each user may have one batch only open at any time, which can be viewed from the Users Maintenance (USERS) screen.

The recommended procedure for reopening an unreconciled closed batch is:

1. Run POSTLST to identify the unreconciled batch number.
2. Select the Batch Header screen, enter the batch number and click Inquire
3. When the screen is displayed, click Change
4. Use the menus to select the appropriate screen needed to reconcile the batch.
5. Either select the specific client account number or scroll through all the postings in the batch to identify the incorrect one. This can then be changed, or deleted.
6. Use the Batch Close screen to close the batch.

Note: You must use the Cash Wastes (CASHW) screen to inquire on, or amend, postings entered on that screen. If you use the Batch Header (BHEAD) screen to inquire on postings entered using the Cash Wastes (CASHW) screen, the following is displayed "This batch contains Client and General Ledger postings which were created using CASH WASTES".

Batch Numbers

Batch numbers are assigned sequentially to the batch when it is opened. There is a facility in Urbis to provide a range of batch numbers to each location. When a batch is opened, the batch number is then assigned sequentially from the range of the Location relevant to that batch. These ranges are set up on the Locations Maintenance (LOCTM) screen, see the *Guide to Setting Up*. This facility can be activated using the blueprint parameter BP-BATCHBYLOC, see the *Guide to Setting Up*.

The following figure shows an example of the Batch Header screen.

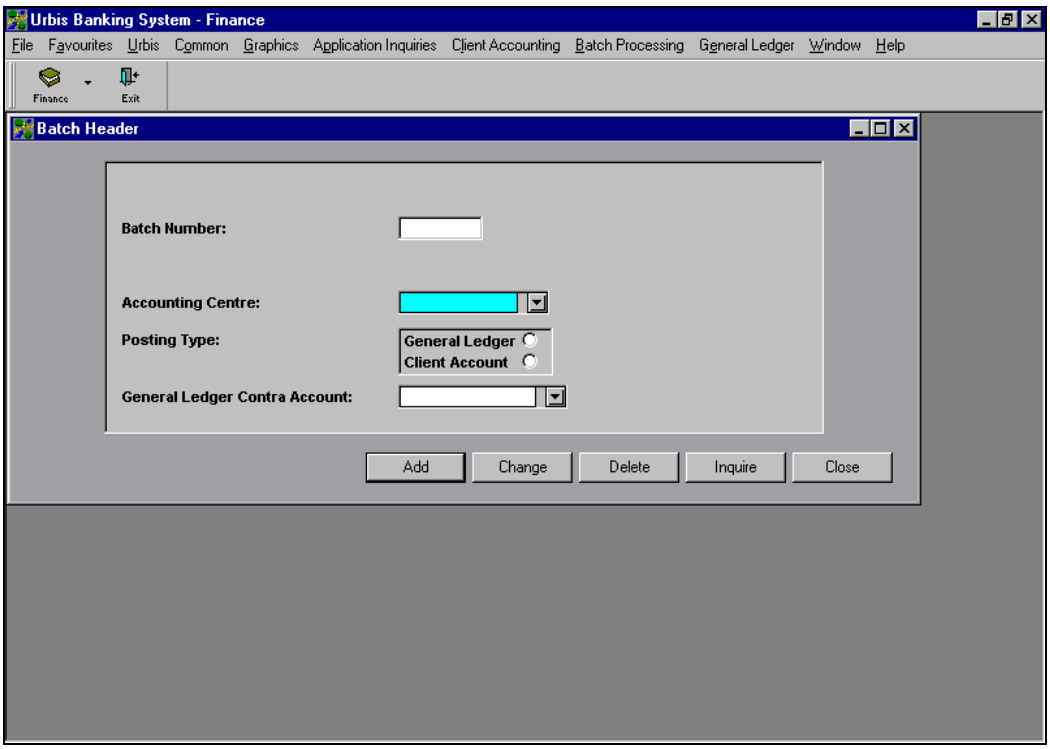

Figure 4–13. Batch Header screen

Client Account Credit (CACR)

This screen is used to credit client accounts. You must open a batch using the Batch Header (BHEAD) screen before using this screen.

The “Currency” field enables batches of mixed currency postings to be made.

The “Reference Number” field contains a system generated number that identifies each posting uniquely and enables you to refer to a specific posting for inquiry or change purposes. These reference numbers are shown on the POSTLST - Batch Postings List report.

Double clicking the icon next to narrative field will open the pop-up window to show/edit the extended posting narrative. When adding or changing a batch, the extended narrative can be modified until the batch is reconciled.

This screen can be used to enter inter-accounting centre postings.

The following figure shows an example of the Client Account Credit screen.

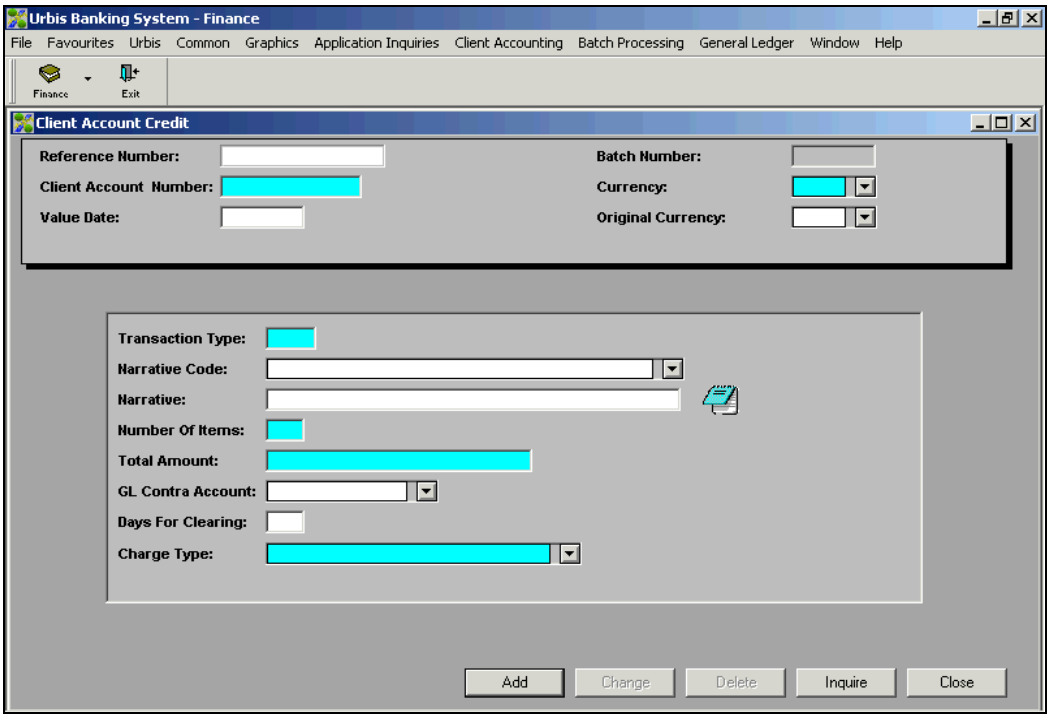

Figure 4–14. Client Account Credit screen

Client Account Credit Control (CACCN)

Use this screen to:

- Reverse incorrect debits
- Suppress a posting from a statement
- Override account blocking
- Backdate credit postings so that the posting date is prior to the current retention date (that is, enter a pre-history posting)
- Manually adjust the interest

When entering a pre-history posting you can calculate and then enter (in the "CR Interest Adjustment" field) an interest adjustment figure to reflect interest accrual between the posting value date and the current retention date. The interest adjustment between the retention date and the system as-of date is calculated and entered automatically.

For reversals, you must enter the reference number of the original posting for the specific account. This becomes the "Reversal Reference Number" and must be distinguished from the "Reference Number" which is automatically generated by the system as the next consecutive number allocated to each new posting. The reversal reference number can be found on the Postings Inquiry by Account (POSTI) screen in the Reference Number field. You can only reverse a pre-history posting which was originally entered as such, not one which has merely slipped beyond the retention date.

Notes: *You cannot reverse a posting in the same batch in which it is being entered. Instead, the posting should be amended or deleted before closing the batch.*

Reversals must be made at the accounting centre where the posting originated.

You must open a batch using the Batch Header (BHEAD) screen before using this screen.

The "Currency" field enables batches of mixed currency postings to be made.

The "Reference Number" field contains a system generated number that uniquely identifies each posting, to enable you to refer to a specific posting for inquiry or change purposes. These reference numbers are shown on the POSTLST - Batch Postings List report.

The following figure shows an example of the Client Account Credit Control screen.

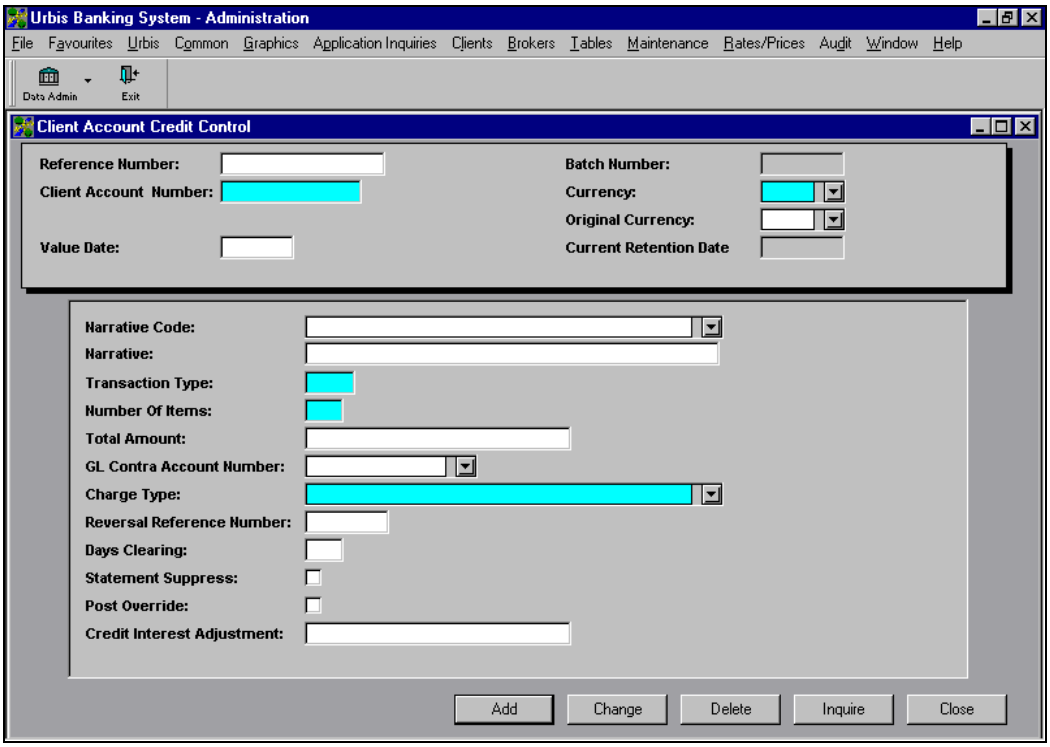

Figure 4–15. CA Credit Control screen

Client Account Debit (CADR)

This screen is used to debit a client account. You must open a batch using the Batch Header (BHEAD) before using this screen.

The “Currency” field enables batches of mixed currency postings to be made.

The “Reference Number” field contains a system generated number that uniquely identifies each posting, to enable you to refer to a specific posting for inquiry or change purposes. These reference numbers are shown on the POSTLST - Batch Postings List report.

You can debit funds that have been previously held by entering the ‘Hold Number’ as part of the debit details. Funds are held using the Hold Funds (HOLDM) screen.

Double clicking on the icon next to the posting narrative field will open the pop-up window to show/edit the extended posting narrative. When adding or changing a batch, the extended narrative can be modified until the batch is reconciled.

This screen can be used to enter inter-accounting centre postings.

The following figure shows an example of the Client Account Debit screen.

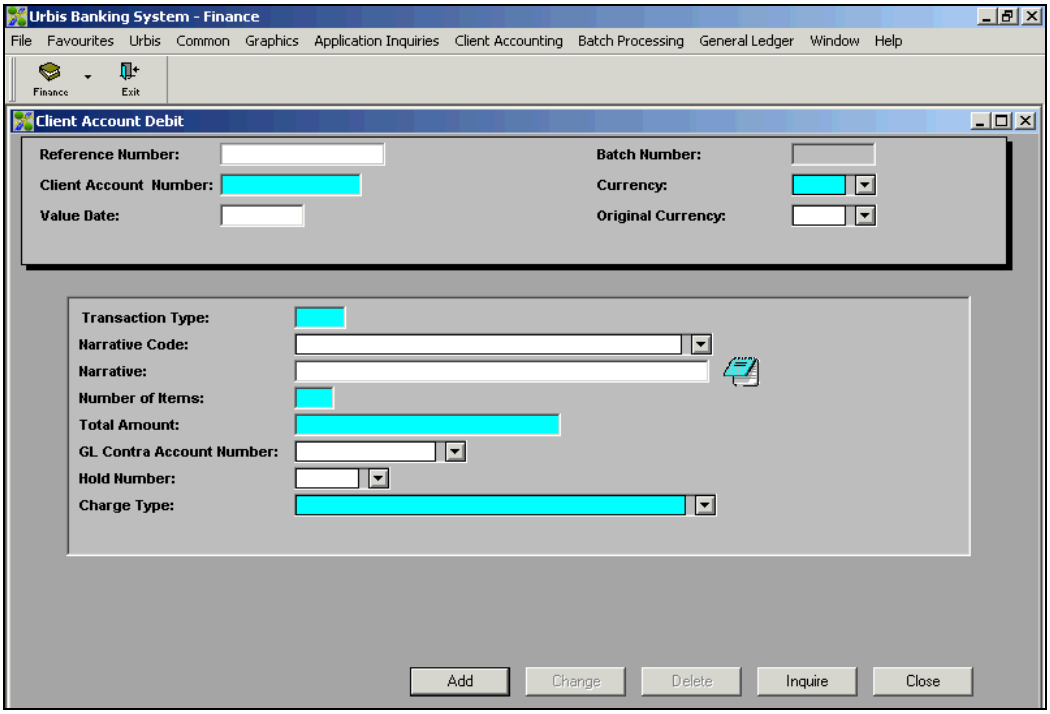

Figure 4–16. Client Account Debit screen

Client Account Debit Control (CADCN)

Use this screen to:

- Reverse incorrect credits
- Suppress a posting from a statement
- Override account blocking
- Backdate debit postings so that the posting date is prior to the current retention date (that is, enter a pre-history posting) or backvalue to a date prior to today
- Manually adjust the interest

When entering a pre-history posting you can calculate and then enter (in the “DR Interest Adjustment” field) an interest adjustment figure to reflect interest accrual between the posting value date and the current retention date. The interest adjustment between the retention date and the system as-of date is calculated and entered automatically.

For reversals, you must enter the reference number of the original posting for the specific account. This is the “Reversal Reference Number” and must be distinguished from the “Reference Number” which is automatically generated by the system as the next consecutive number allocated to each new posting. The reversal reference number can be found on the Postings Inquiry by Account (POSTI) screen in the Reference Number field. You can only reverse a pre-history posting which was originally entered as such, not one which has merely slipped beyond the retention date.

Notes: *You cannot reverse a posting during the same batch in which it is being entered. Instead, the posting should be amended or deleted before closing the batch. Reversals must be made at the accounting centre where the posting originated.*

The “Reference Number” field contains a system generated number that uniquely identifies each posting, to enable you to refer to a specific posting for inquiry or change purposes. These reference numbers are shown on the POSTLST - Batch Postings List report.

The “Currency” field enables batches of mixed currency postings to be made.

You must open a batch using the Batch Header (BHEAD) before using this screen.

The following figure shows an example of the Client Account Debit Control screen.

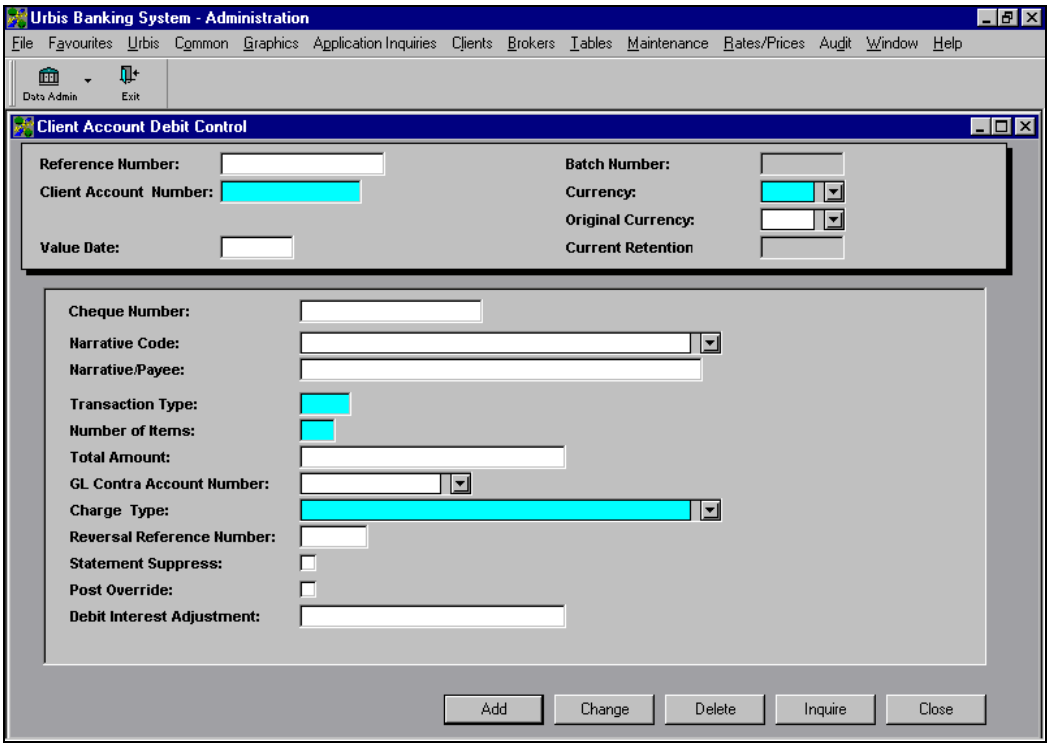

Figure 4–17. CA Debit Control screen

Debit Cheque (CADCQ)

Use this screen to enter cheque details. If the cheque has been stopped using the Stopped Cheques (STOPM) screen, your entry is rejected.

If blueprint parameter BP-CHEQ-CONT has been set to "Y" (see "Blueprint Parameters" in the *Guide to Setting Up*), then the system ensures that the "Cheque Number" entered has not already been utilised.

The “Currency” field enables batches of mixed currency postings to be made.

The “Reference Number” field contains a system generated number that identifies each posting uniquely, to enable you to refer to a specific posting for inquiry or change purposes. These reference numbers are shown on the POSTLST - Batch Postings List report.

This screen can be used to enter postings between the different accounting centres of your financial institution.

You must open a batch using the Batch Header (BHEAD) before using this screen.

The following figure shows an example of the Debit Cheque screen.

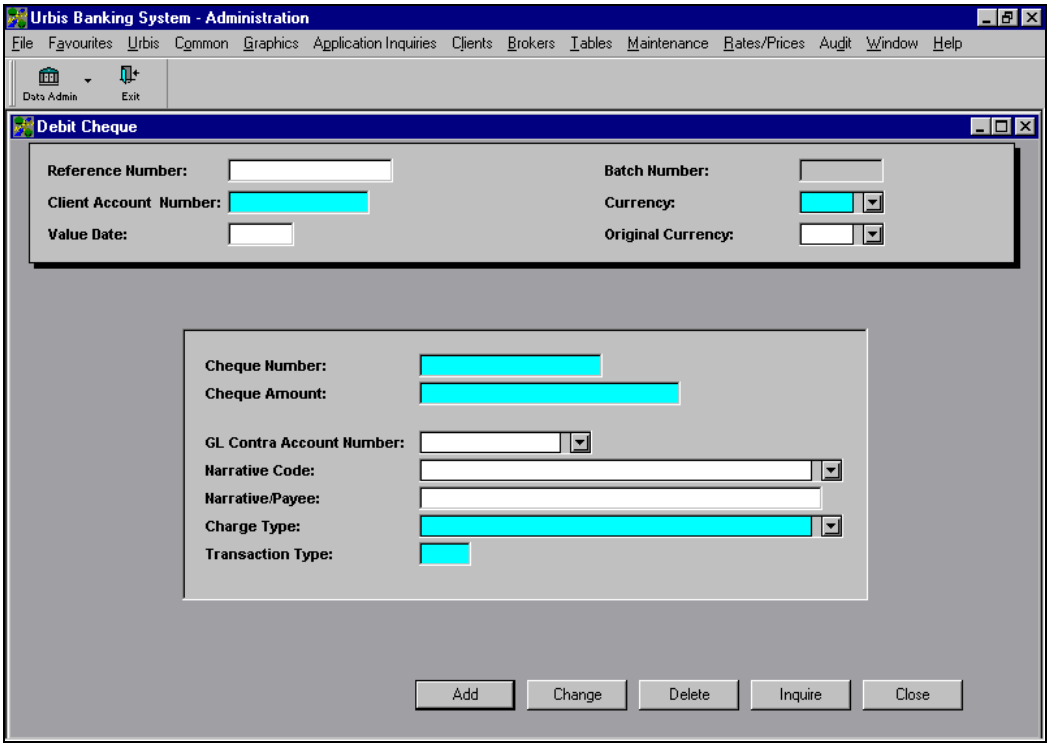

Figure 4–18. Debit Cheque screen

Batch Close (BCLOS) for Client Accounting

This screen is used to close a batch of postings to client accounts. The following expected values must be entered if you wish to reconcile the batch:

- Number of credit items
- Credit total
- Number of debit items
- Debit total

If these values are different to those calculated by the system, the calculated values are displayed.

If the batch consists of mixed currency postings, add the amounts of the postings together, regardless of the actual currency of each, to make the credit and debit totals. For example, if you enter the following postings:

- Credit 100,000 GBP
- Credit 400,000 USD
- Debit 50,000 GBP
- Debit 100,000 USD

This gives a debit total of 150,000 and a credit total of 500,000. The system then checks that the totals you have entered agree with the totals it has calculated.

If a client account was entered, the batch can only be closed as “reconciled” if the expected and calculated values are the same. If a general ledger contra account was entered on the Batch Header (BHEAD) screen, the system permits the total credit and debit amounts to differ.

If a batch does not balance, it may be corrected, deleted or closed “unreconciled”. The procedure for reopening an unreconciled closed batch is described in the explanation of the “Batch Header (BHEAD) for Client Accounts” earlier in this section.

If you wish to reconcile a batch, you must enter the total credit and debit amounts and the total credit and debit items.

When a batch contains either back-valued paired transactions or those that require a negative balance check, then these transactions will be removed from the batch when it is closed. They will then be moved to an authorisation queue. You can view this queue from the Management Services Queue (BANQI) screen. Paired transactions belong to the Client Account Management Services (CMS) functionality, described in Appendix C.

Notes: *A batch will be closed unreconciled automatically if the terminal is logged off whilst the batch is still open.*

Unreconciled batches will be purged, by the POSTLST - Batch Postings List report, after the expiry of the user defined period, defined by the retention period parameter BATCH-HIST (see “Retention Parameters” in the Guide to Setting Up).

The “Batch Priority” field enables you to select a priority value between 1 to 9 from the list. This field is stored in the BHEAD table for POSTUPD reference.

***Note**: By default the value is 5. You can select a priority value between 1to 9 from the dropdown. If the priority value is not entered the system will assign default value for the corresponding batchtype (C or G) as defined by user on the new default batch priority maintenance static table, BP.*

The following figure shows an example of the Batch Close screen.

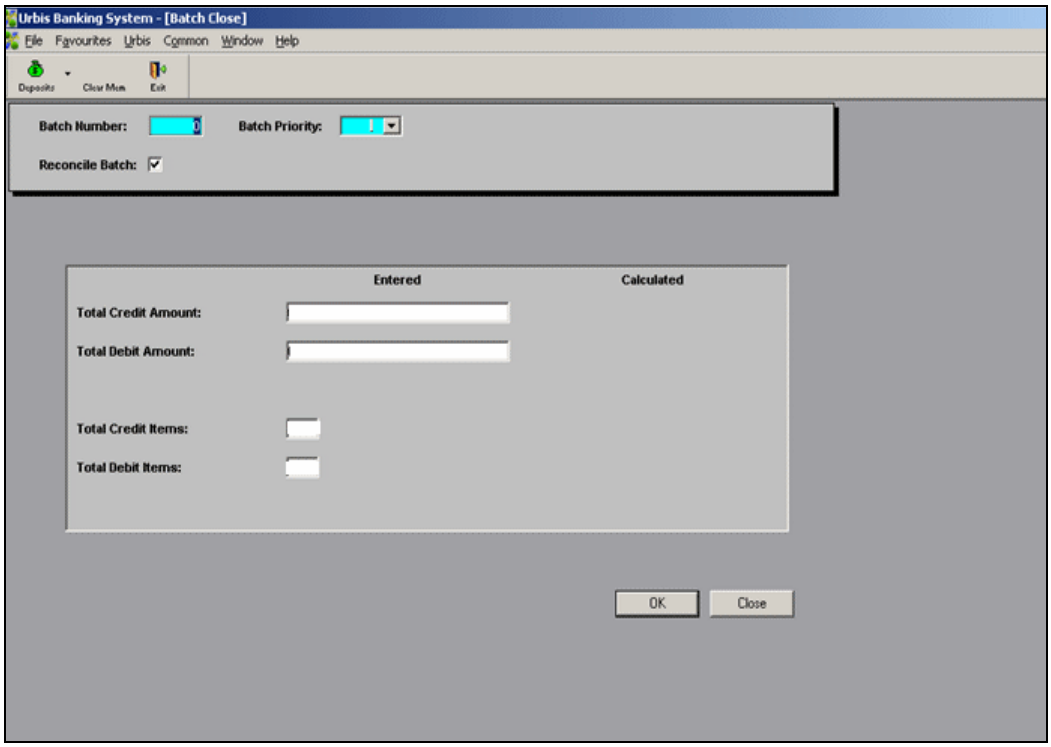

Figure 4–19. Batch Close screen

Cashier/Official Cheque Issue (CHEQA)

Use this screen to enter details of a cashier's or official cheque that is being issued. When a client requests a cashier's cheque, you use this screen to enter details of the cheque and the account against which the cheque will be debited. The cheque number entered must be unique for the type of cheque (Cashier or Official).

When details of the cheque are entered successfully, a batch number will be assigned automatically to the issue and the appropriate postings will be generated by the POSTUPD - Update Postings report.

The following figure shows an example of the Cashier/Official Cheque Issue screen

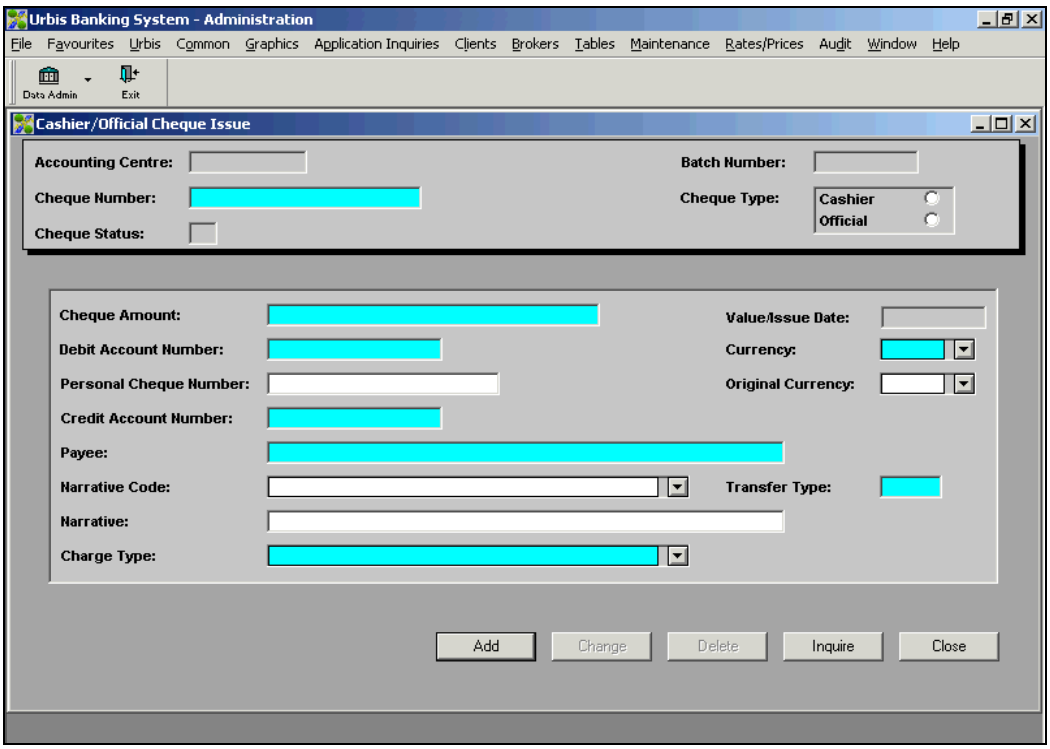

Figure 4–20. Cashier/Official Cheque Issue screen

Cashier/Official Cheque Payment (CHEQP)

Use this screen to enter details of a cashier's or official cheque that is being presented for payment. This screen can only be used for cheques that have been issued using the Cashier/Official Cheque Issue (CHEQA) screen.

When a client presents a cashier's or official cheque for payment, you must enter the 'Cheque Number' and 'Cheque Type', and click **Inquire**.

Details of the cheque will be displayed. You must enter details of the account to be credited with the payment; this can be either a client or a general ledger account. To initiate the payment, click **Change**.

When details of the cheque payment are entered successfully, the appropriate postings will be generated by the POSTUPD - Update Postingsreport.

The following figure shows an example of the Cashier/Official Cheque Payment screen.

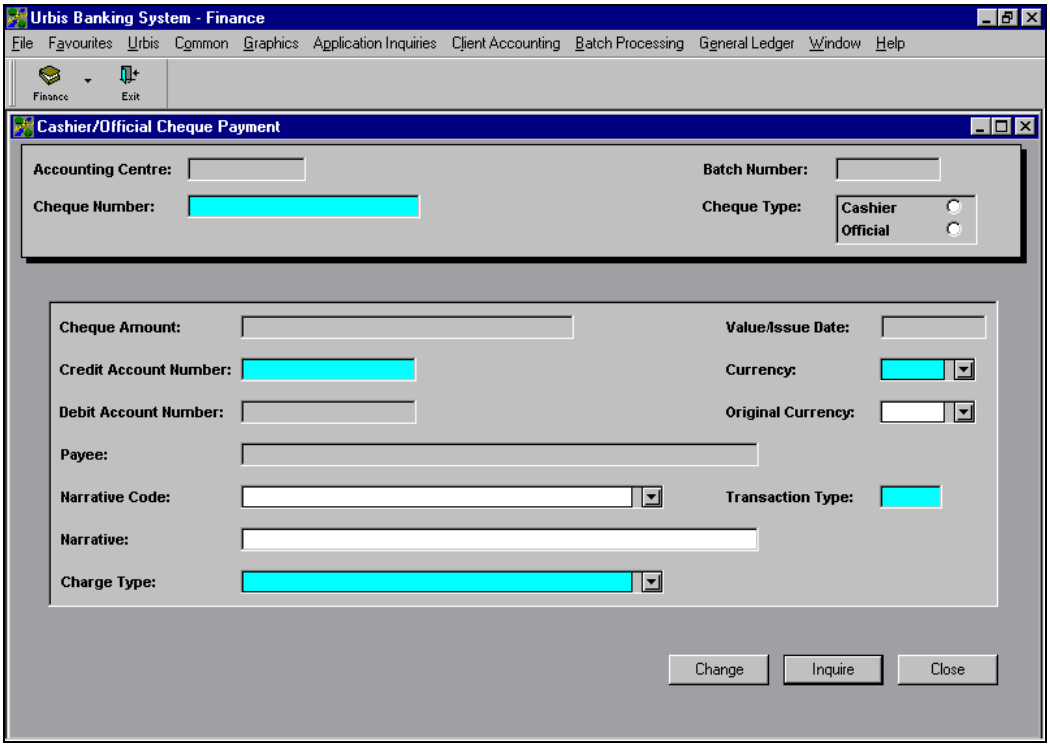

Figure 4–21. Cashier/Official Cheque Payment screen

Entering Cash Postings for Client Accounts using Cash Wastes (CASHW)

Use this screen to enter bulk credit and debit cash postings to client accounts and to general ledger accounts (cash wastes for general ledger accounts are described in the *General Ledger Administration Guide*). The postings do not have to be of the same type or currency or have the same value date. This screen supports cross accounting centre postings in single batch and the default accounting centre in the header is used. In a given batch, postings should balance by currency and value date or the batch will not be added and an error message will be returned. The inter-accounting centre postings will be automatically generated.

If several postings within a group of mixed currency postings are of the same currency, the currency code need only be entered for the first posting. All subsequent postings will default to that value until a new currency value is entered.

Notes: *Batches must balance within individual currency total.*
You cannot use this screen to amend postings made using the clean payments screens described in the Settlements Guide.

A batch may consist of information entered on several screens. The batch header and batch close screens are not used with cash wastes. When a batch is entered successfully, a batch number is assigned automatically and is displayed on the screen at that point. This number is used to recall the batch when making inquiries.

The maximum number of days forward that you may date a posting is determined at installation. If you do not enter a value date for the first posting (on the first line), the system as-of date is used. When you add postings, the ‘Account’ and ‘Date’ fields default to the entries on the previous line.

Notes*: The ‘Transfer’ and ‘Charge’ fields contain default values; you can overwrite these defaults if required.*
On line 1, the “Date defaults to today's date. If a Currency, Date or Account is entered on one line, the same values will default on subsequent lines, until new details are entered.

If blueprint parameter BP-OVDR-CONT has been set to 'Y' (see "Blueprint Parameters" in the *Guide to Setting Up*), the client account's overdraft limit is applied to batches of postings entered via the Cash Wastes screen. If a debit posting in the batch will cause the overdraft limit to be exceeded, then it will not be possible to close the batch until the overdraft limit is increased using the Client Account Static Details (WACCM) screen.

If the blueprint parameter BP-EXTD-NARR is set to YES, the system permits extended posting narratives. Double clicking on the Notes icon next to posting narrative field will open the pop-up window to show/edit the extended posting narrative. On the extended narratives pop up window the first line as entered on the cash wastes screen will be displayed and the following five lines can be entered.

If batch authorization is set up (the system blueprint parameter, BP-ATH-REQ-BATCH is set to YES), a batch is reconciled only after it is authorized via Batch Inquiry screen, BTCHI. When adding or changing a batch, the extended narrative can be modified by re-linking to extended narrative pop up window until the batch is reconciled.

The “Batch Priority” field enables you to select a priority value between 1 to 9 from the list. This field is stored in the BHEAD table for POSTUPD reference.

Note: *By default the value is 5. If priority value is not entered the system will assign default value or the corresponding batch type (W) as defined by user on the new default batch priority maintenance static table, BP.*

The following figure shows an example of the Cash Wastes screen.

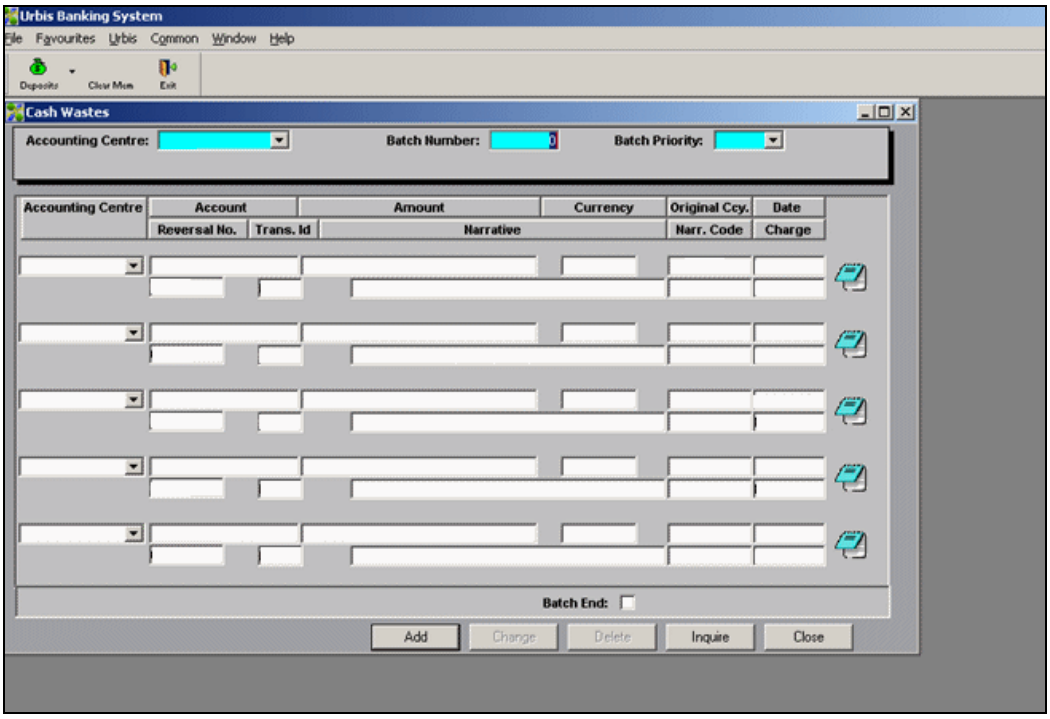

Figure 4–22. Cash Wastes screen

Print/Reprint Batch Postings (CAADI)

If you choose to store details of batch postings by setting blueprint parameter BP-STORE-ADV to 'Y' (see "Blueprint Parameters" in the *Guide to Setting Up*), this screen can be used to view details of the batch postings made to client accounts. In the "Printed/Unprinted" field, select "Printed" to see postings for which confirmations have already been printed, or "Unprinted" to see details of postings that were not printed because the "Payment Indicator" was not set on when the posting was entered

To print a confirmation for a displayed posting, select the posting and click the **Reprint** button.

The sleeping report CUSTADV - Confirm Batch Postings, see the *On-Demand Reports Guide*, will then produce the confirmation.

The following figure shows an example of the Print/Reprint Batch Postings screen.

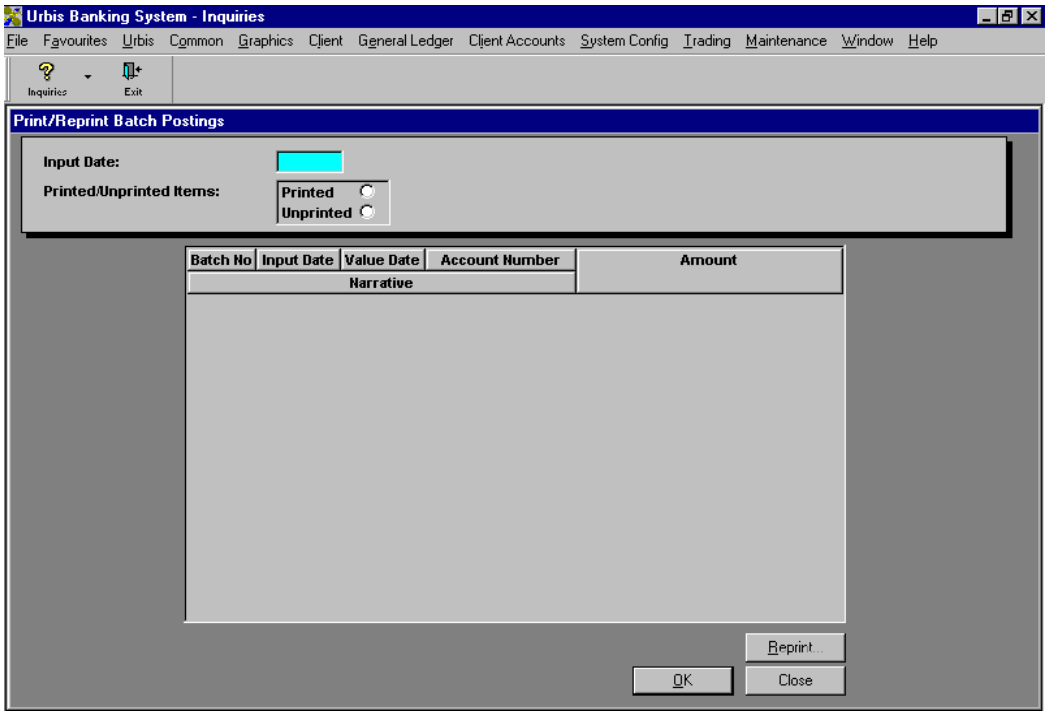

Figure 4–23. Print/Reprint Batch Postings screen

Setting Up and Maintaining Account Charges

The procedure for setting up and maintaining account charges is described below, using the following screens:

- The General Purpose Narratives (GNARR) screen is used to set up charge types and charge conditions, using table types CT and CH respectively
- The Charge Codes Maintenance (CACCM) screen is used to set up and maintain charge codes. For each charge condition, a number of charge codes relating to different posting types are defined. Each charge code within a charge condition has an associated amount and effective date
- The Account Charges Static Details (CACHM) screen is used to enter details of account charges, and conditions. These may be linked to a specific client account or to an accounting centre. Charge conditions are used to define:
  - Frequency of charges
  - Minimum amount to be charged for a charge period
  - Offset interest details. This is a way of reducing charges for clients whose accounts remain in credit. A notional interest amount is calculated, based on the credit balance; this is deducted from the calculated charge amount and only the net difference is charged to the client
  - Minimum balances. Accounts that remain at or above defined minimum balances will not incur charges
- The Client Account Static Details (WACCM) screen is used to allocate the charge conditions so that they become effective on the appropriate client account; also to identify the accounts to which charges are settled
- Account Charges Screen Defaults (CACSM) is used to set up and maintain screen defaults for account charges
- Account Charges Review and Post (CACRP) is used to review charge amounts for specific client accounts. Charges are calculated during overnight processing. The charges are then available to be reviewed and, if necessary, they can be changed manually before they are posted
  - charges may be reviewed, for each client account, before they are posted
  - alternatively, **all** charges due up to a specified date may be accepted

The above screens are described on the following pages, with the exception of:

- The General Purpose Narratives table (GNARR); see the *Guide to Setting Up*
- The Client Account Static Details (WACCM) screen; see “Setting up and Maintaining Client Accounts”

Charge Codes Maintenance (CACCM)

The Charge Codes Maintenance (CACCM) screen is used to set up and maintain details of charge conditions. These are applied to specific accounts, using the Account Charges Static Details (CACHM) screen.

For each charge condition, a number of charge codes relating to different charge types are defined. Each charge code within a charge condition has an associated amount and effective date.

Enter the date from which the new charge conditions are to apply in the “Effective Date” field. The date must be either on or after the system as-of date. If this field is left blank, it defaults to the system as-of date.

The charge condition code must be first set up on the General Purpose Narratives (GNARR) table, type CH.

The following figure shows an example of the Charge Codes Maintenance screen.

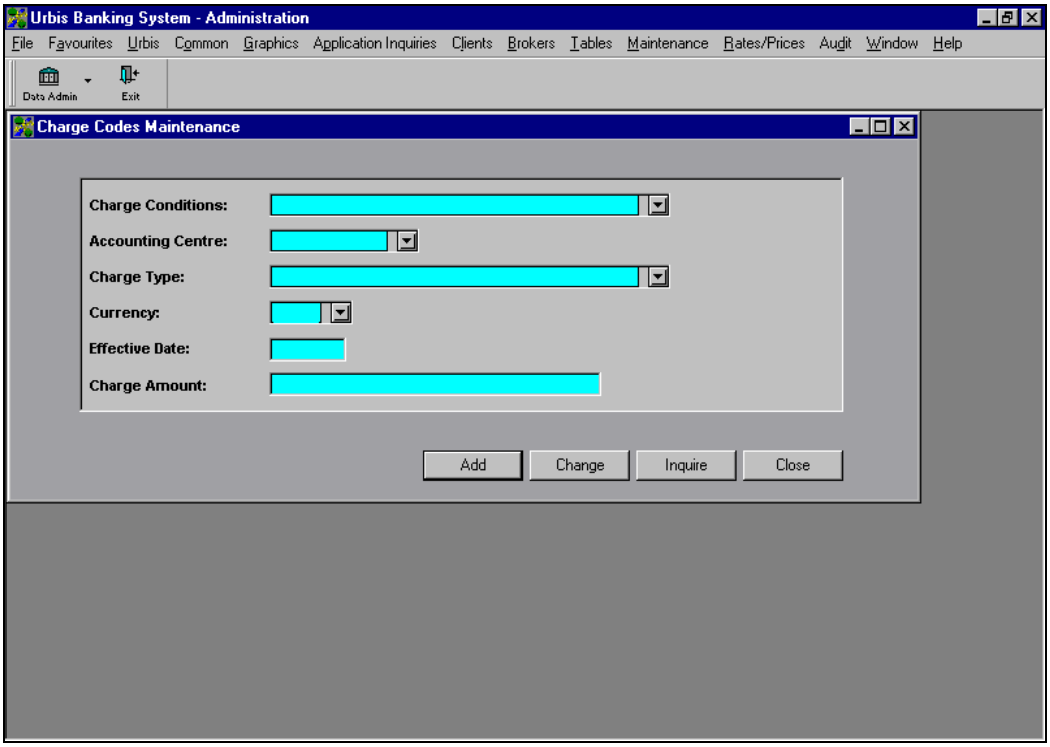

Figure 4–24. Charge Codes Maintenance screen

Account Charges Static Details (CACHM)

The Account Charges Static Details (CACHM) screen is used to enter details of the account charges that are levied on client accounts.

You can set up ‘General’ or ‘Specific’ account charges:

- General account charges apply to all client accounts in the specified currency that belong to the specified accounting centre providing the ‘Charges’ field is set to ‘General’ or left blank on the Client Account Static Details (WACCM) screen also
- Specific account charges apply to the account entered in the ‘Account Number’ field only. The ‘Charges’ field must be set to ‘Specific’ or left blank on the Client Account Static Details (WACCM) screen
- Fee Type account charges apply to all client accounts. Charges are calculated based on the standard profile where the currency used is US Dollars and the frequency is monthly.

From this screen you can link to the Management Services Transactions for Analysis (TRCKM) screen. To do this, click the **Analysis** button.

The following figure shows an example of the Account Charges Static Details screen.

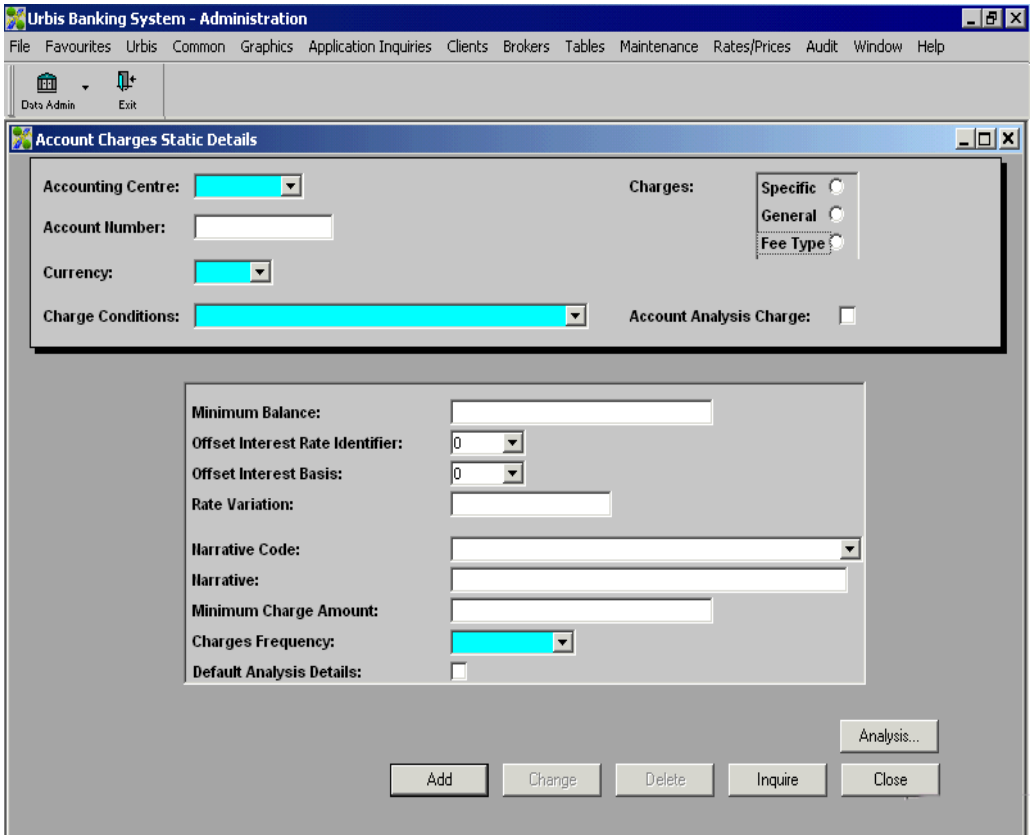

Figure 4–25. Account Charges Static Details screen

Setting Charge Conditions

The “Charges” field is used to specify whether the charge code identified in the “Charge Conditions” field is to apply to a number of accounts held within an accounting centre, or to a specific client account:

Select **General** if the charge conditions are to be applied generally to an accounting centre, or **Specific** if they are to be applied to a specific client account. Select **Fee Type** to calculate standard fees. The fee charges are not linked to any account just like general charges.

If specific charge conditions are to apply enter a valid account number and corresponding currency mnemonic. Otherwise leave this field blank.

Offset Interest

Offset interest is a way of reducing the amount to be charged on an account. The interest rate is calculated using a particular base rate that is identified by entering a code entered in the “Offset Interest Rate Identifier” field. This rate can be either increased or decreased by entering the required adjustment amount in the “Rate Variation” field. To decrease the rate, precede the adjustment amount with a minus sign.

Adding a Narrative

If you require a standard narrative to be printed on client advices enter the appropriate code for it in the “Narrative Code” field. Otherwise, leave this field blank and enter your own narrative in the “Narrative” field instead.

Account Charges Review and Post (CACRP)

The Account Charges Review and Post (CACRP) screen is used to review and post charge amounts for specified client accounts.

Charges are calculated during overnight processing. The system then makes them available to be reviewed and, if necessary, changed manually prior to making postings effective:

- Either charges may be reviewed, **for each client account**, before they are posted
- Or **all** charges due up to a specified date may be accepted

If the “Account Identifier” and “Currency” fields are left blank, details of the client accounts under review on the system as-of date are displayed in client account order.

To display details of a specific client account enter the account number in the “Account Identifier” field and the corresponding currency in the “Currency” field.

Use the scroll facilities to browse through the details of the accounts under review. Note that you do not have to review an account before moving on to the next one.

To use this screen to trigger postings for all charges incurred, blank out all fields on the screen and enter the date up to which you want the charges to be posted, in the “To Charge Settlement Date” field. This would result in all charges up to that date (reviewed and unreviewed) being posted.

To change the amount to be charged, enter the required value in the “Amount To Charge” field. If no charge is to be made, enter “zero” in the field.

When the details have been reviewed and if they are correct, confirm them by switching 'On' the “Confirm Action” field.

The following figure shows an example of the Account Charges Review and Post screen.

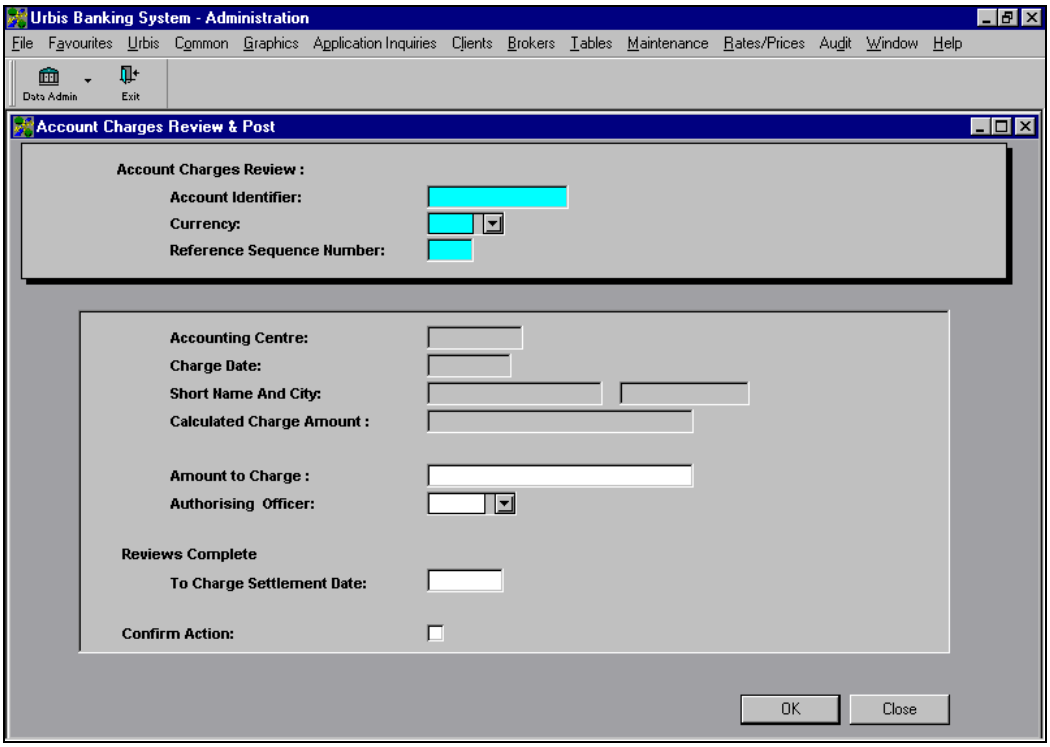

Figure 4–26. Account Charges Review and Post screen

Maintaining Screen Defaults

You can set up account charge defaults for selected screens to which charges are applicable using the Account Charges Screen Defaults (CACSM) screen.

Account Charges Screen Defaults (CACSM)

The Account Charges Screen Defaults (CACSM) screen is used to specify that entries made through any of the following screens will, by default, result in a charge being applied according to the charge transaction type specified:

- Client Account Credit Control (CACCN)
- Client Account Credit (CACR)
- Client Account Debit Control (CADCN)
- Debit Cheque (CADCQ)
- Client Account Debit (CADR)
- Cashier/Official Cheque Issue (CHEQA)
- Cashier/Official Cheque Payment (CHEQP)
- Cash Wastes (CASHW)
- Clean Payments Addition (CPAYA)

The following figure shows an example of the Account Charges Screen Defaults screen.

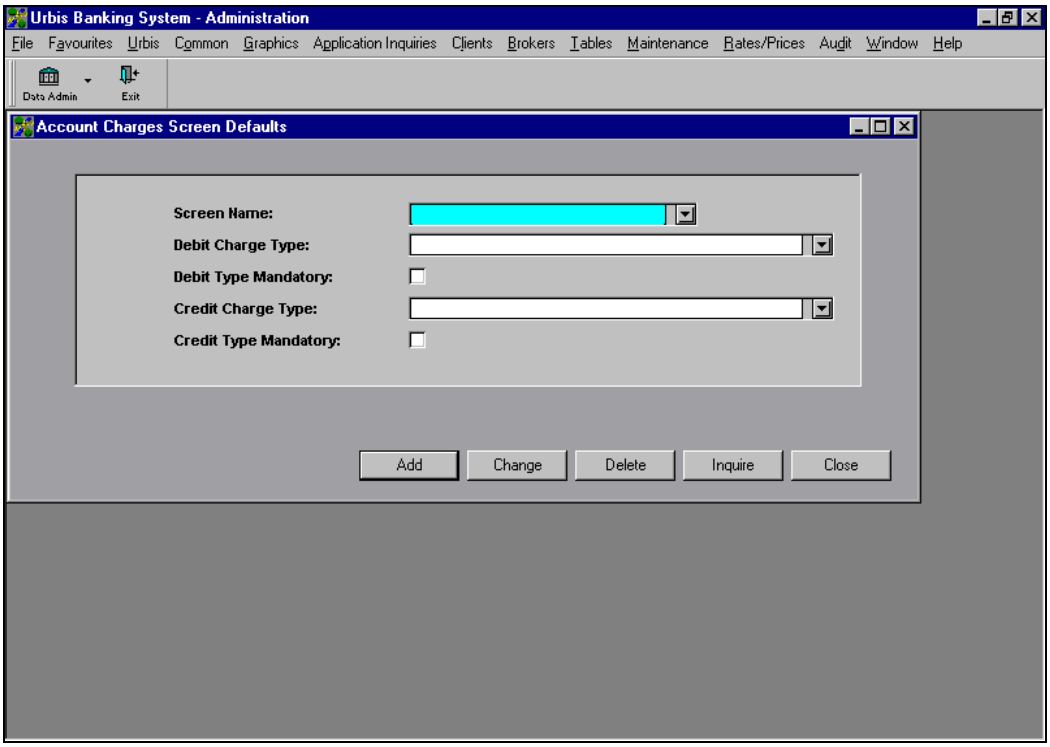

Figure 4–27. Account Charges Screen Defaults screen

Debit Charge Type/Credit Charge Type

Enter the code for the debit/credit charge transaction type that you require to be attached to entries made through the screen described in the "Screen Name" field. The charge transaction type mnemonics are defined at installation on the General Purpose Narratives (GNARR) table and on the Charge Codes Maintenance (CACCM) screen.

Debit Type Mandatory/Credit Type Mandatory

Use this field to indicate if the charge type entered is to be the only charge applicable for the specified screen:

- On - Yes
- Off - No

Setting Up and Maintaining Controls

The following screens are used to set up and maintain controls for client accounts:

- Hold Funds (HOLDM), used to hold funds on an account
- Stopped Cheques (STOPM), used to stop individual cheques or a range of cheques

Hold Funds (HOLDM)

This screen is used to hold or reserve funds on an account against an expected future outgoing payment. Funds can be held for a period or for a specific cheque, contract or until a debit transaction for a specified amount is received. If “Override Balance Check” is set to "Y", the requested hold amount will be subtracted even though the amount is greater than the account balance.

A hold on funds is cancelled as follows:

- Funds held for a specific cheque are released when the cheque is processed. Non-retail cheque transactions are entered on the Debit Cheque (CADCQ) screen.
- Funds held for a specific contract are released when the contract is processed
- Funds held for a debit transaction of a specific amount are released when the specified amount is debited. Non-retail debit transactions are entered on the Client Account Debit (CADR) screen.
- Funds held until an expiry date is released as part of the Start of Day processing on the expiry date. See the *Overnight Reports Guide* for more information on the overnight report run.

A held funds request reduces the ‘available’ balance on an account. Any number of holds can be placed on an account.

The following figure shows an example of the Hold Funds screen.

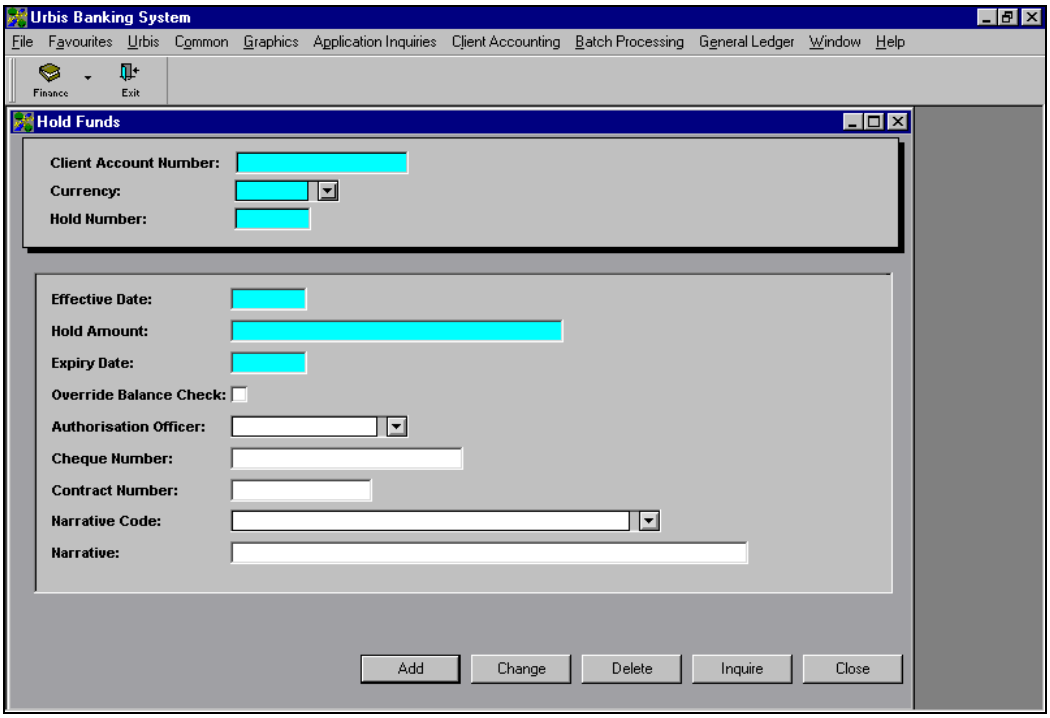

Figure 4–28. Hold Funds screen

Stopped Cheques (STOPM)

This screen is used to stop individual cheques or a range of cheques against a non-retail account. For an individual cheque either the cheque number or the cheque amount and payee can be entered. Once a cheque has been presented, it cannot be stopped.

If the cheque or range of cheques has already been presented and recorded, the entry is rejected.

The following figure shows an example of the Stopped Cheques screen.

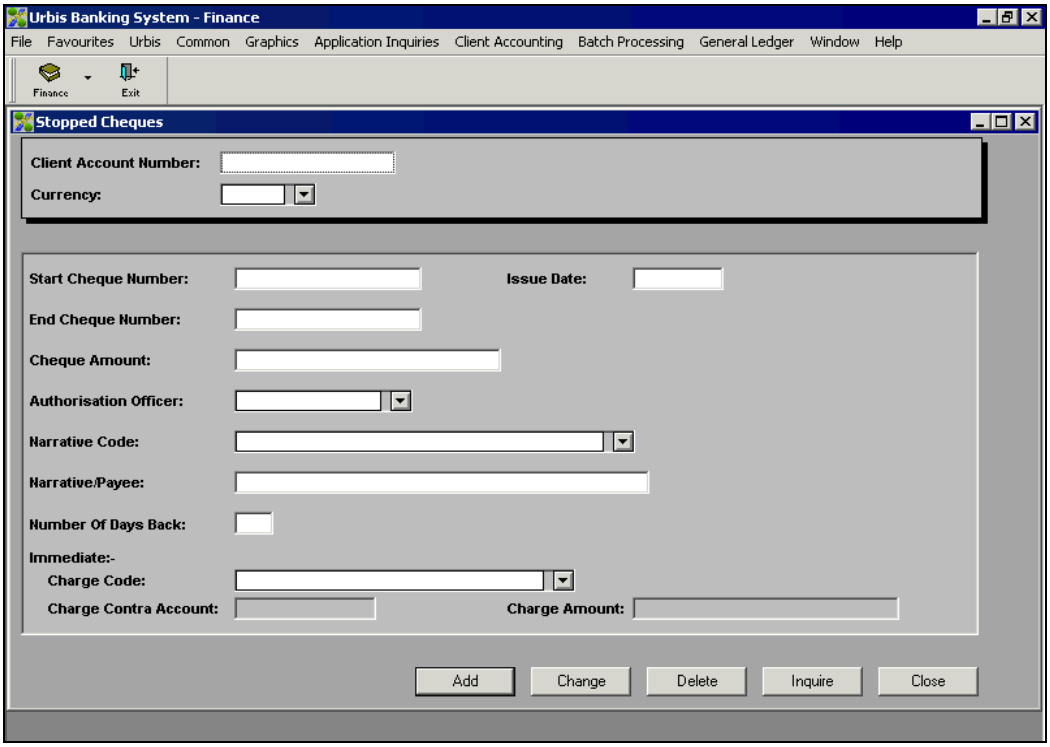

Figure 4–29. Stopped Cheques screen

Note: *The "End Cheque Number" field is not available for inquiry; if you wish to inquire on a range of stopped cheques, you must inquire on each individual cheque.*

Inquiry Screens for Non-Retail Accounts

The following pages give details of the inquiry screens relevant to non-retail accounts:

- Client Account Inquiry (CAACI) shows full details of a non-retail client account
- Account Summary By Client - Banking (CAASI) shows a summary of all non-retail accounts for a specified client
- Charge Statement Inquiry (CACSI) gives details of a charge statement for a specific non-retail account
- Client Accounts Inquiry (CIBAL) displays the current book balance of all accounts (non-retail and retail) held by a client
- Account History Inquiry (HISTA) shows historic information for a non-retail client account
- Client Accounts in Overdraft (CAODI) shows the accounts currently in overdraft
- Hold Funds Inquiry (HOLDI) shows details of funds held on a client account
- Interest Conditions Inquiry (INTSI) shows a summary of the interest conditions that apply to a non-retail account
- Postings Inquiry By Account (POSTI) shows the amount and description of the postings made to a specified non-retail client account from a specified date
- Postings Inquiry By Number (POSTN) shows the amount and description of all postings made to a non-retail client account included on a specified statement
- Statement Inquiry By Date (STMTD) shows the amount and description of postings made to a General Ledger or non-retail client account from a specified input date
- Journal Inquiry By Value Date (JRNLI) shows the amount and description of postings made to a General Ledger or non-retail client account from a specified value date
- Stopped Cheques Inquiry (STOPI) shows details of stopped cheques for a specified non-retail account
- Batch Inquiry (BTCHI) shows details of the batches in the system
- Batch Detail Inquiry (BTDTI) shows details of the transactions in a batch

A full description of the fields on the screens, and valid entries, is given in Section 6, “Definition of Field Names”.

Client Account Inquiry (CAACI)

This inquiry shows full details of a non-retail client account. You can use this inquiry to check and monitor details of a client account, including balances and interest outstanding.

Once an inquiry has been made, it is possible to see additional account information on the Client Account Maintenance (CAHDR) screen. To do this, click the **Account Static** button.

An example of this inquiry screen is given in the following figure:

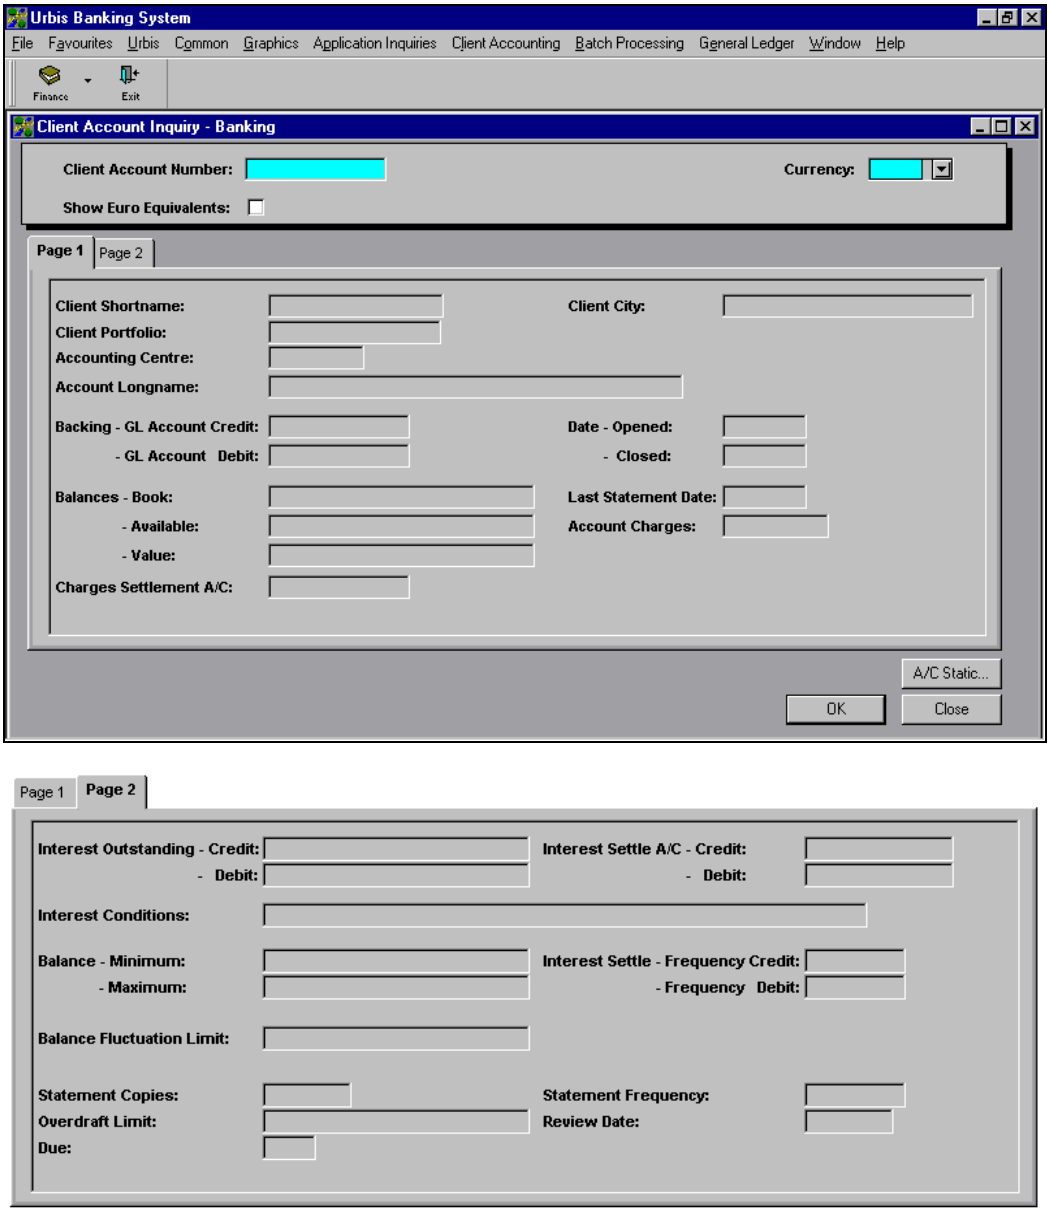

Figure 4–30. Client Account Inquiry screen

The following additional information is displayed:

- The account type:
  REAL ACCOUNT
  DUMMY ACCOUNT
  GROUP ACCOUNT
- The account status:
  UNOPENED
  ACTIVE
  INACTIVE
  SUSPENDED
  GOVERNMENT SUSPENSION
  CLOSED
  DELETED
- Whether the account is an asset or liability:
  ASSET
  LIABILITY
- Whether or not the account is sensitive:
  SENSITIVE
  NOT SENSITIVE
- Whether there any blocks on the account:
  TOTALLY BLOCKED
  DEBITS BLOCKED
  CREDITS BLOCKED
  CHEQUES BLOCKED

Other account details may be displayed, depending on what has been specified at installation.

Account Summary By Client - Banking (CAASI)

This inquiry shows a summary of all non-retail accounts for a specified client. Where more than five accounts exist for a client, the details may extend to more than one screen. To view the details held on a subsequent screen, click the **More** button.

The selection of a client is based on its “Shortname” and “City”. However, it is possible to enter additional criteria at the time of selection, defining the specific account (“Account Identifier”) whose details you wish to appear on the first display line of the screen. You may also enter:

- The Currency of the specific account (where more than one similar Account ID exists), in which case the details appearing in the first display line will be those associated with the selected Shortname, City, Account ID and Currency
- A partial Account ID, in which case the details appearing in the first display line will be those associated with the first Account ID (for the selected Shortname and City) that starts with the matching characters.

You can use this inquiry to monitor the value and book balances of, and interest outstanding on, the selected client's accounts.

A linked inquiry facility is available from this screen to enable you to link to screens that show details associated with an account:

Click:

- A/C Details - Client Account Inquiry (CAACI)
- A/C Static - Client Account Maintenance (CAHDR)
- Post/Acc - Postings Inquiry by Account (POSTI)
- Post/No - Postings Inquiry by Number (POSTN)
- Statement - Statement Inquiry by Date (STMTD)
- A/C Hist - Account History Inquiry (HISTA)
- Hld Funds - Hold Funds Inquiry (HOLDI)
- Stop Chq - Stopped Cheques Inquiry (STOPI)
- Financial - LA Financial Codes Maintenance (LABCM)

***Note**: The link to the LA Financial Codes Maintenance (LABCM) screen is available if you have installed the Loans Administration module.*

An example of this inquiry screen is given in the following figure:

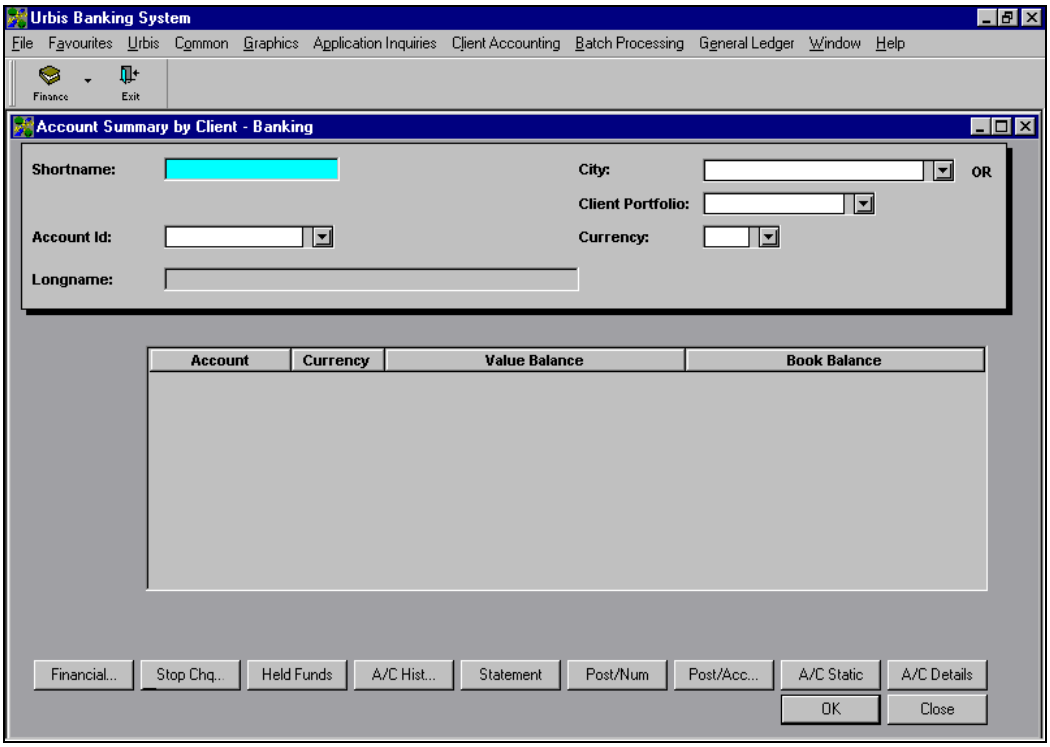

Figure 4–31. Account Summary by Client screen

Charge Statement Inquiry (CACSI)

The Charge Statement Inquiry (CACSI) screen is used to inquire on a charge statement for a specific account.

If the “Charges Date” field is left blank, a charge statement of current charge details is displayed. Alternatively, a charge statement for a specific date can be displayed by entering the required date in the “Charges Date” field.

An example of the Charge Statement Inquiry screen is given in the following figure:

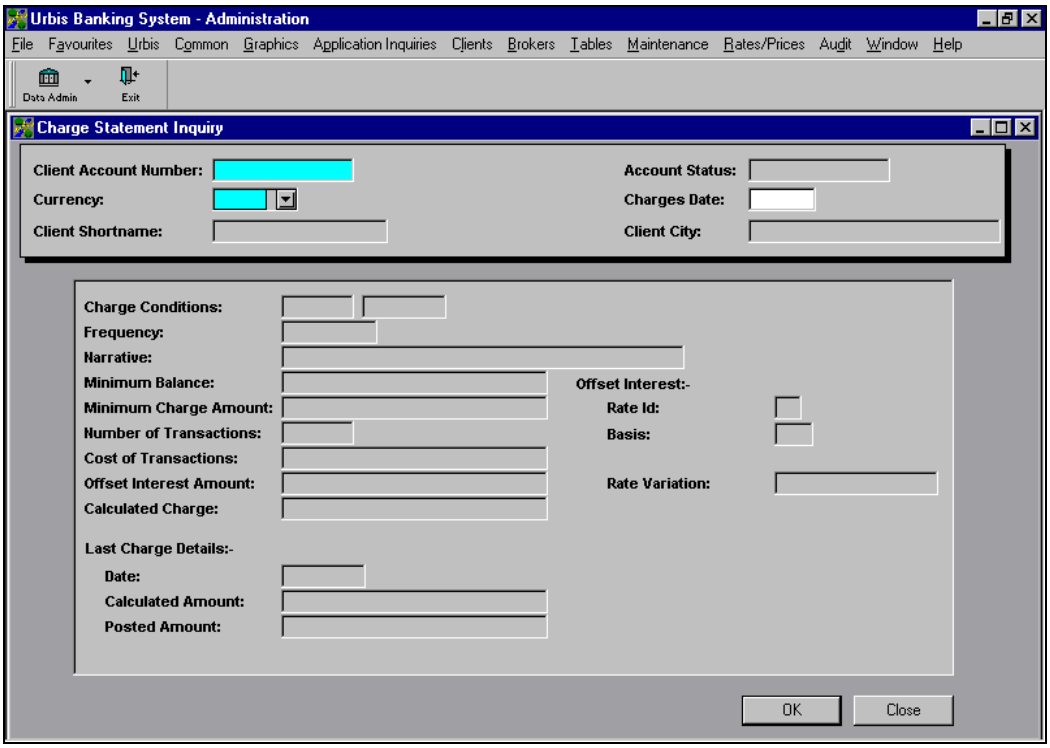

Figure 4–32. Charge Statement Inquiry screen

Client Accounts Inquiry (CIBAL)

Use this inquiry to display the current book balance of all accounts held by a client. Balances are displayed in the currency of the account.

A linked inquiry facility is available from this screen to enable you to link to screens that show details associated with an account. Click the **Account Details** button to view account details screen appropriate to the account type. For example, for a counterparty account, Client Account Maintenance (CAHDR). Click the **Statement** button to view the Statement Inquiry by Date (STMTD) screen for counterparty accounts.

The following figure shows an example of this inquiry screen.

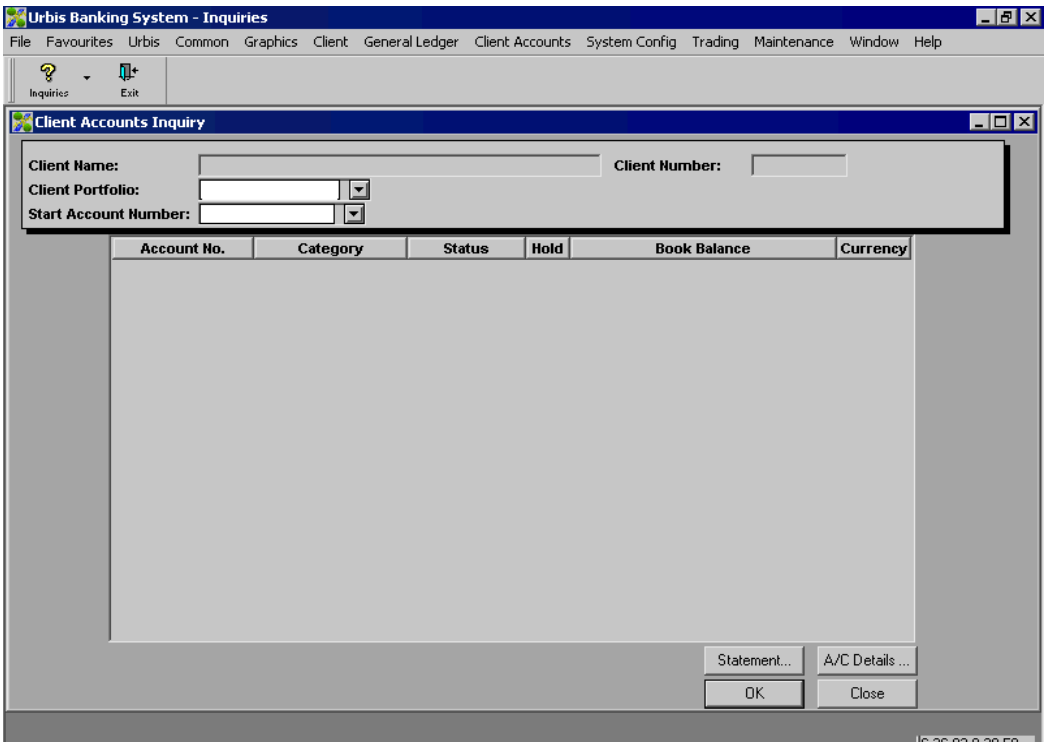

Figure 4–33. Client Accounts Inquiry screen

Account History Inquiry (HISTA)

This inquiry shows historic information for a general ledger or client account. You can use this screen to inquire on the balance or unsettled interest outstanding on all the value dates from the starting date specified.

The account balance information displayed is based on the later of:

- The balance on the last day that the balance changed, or
- The balance on the day before the last profit period date

The interest accrual information is displayed for:

- A day on which there is an interest settlement
- A day on which the interest conditions changed for the account. This may be due to a base rate change, an interest condition change, or a change of backing account.
- The day before the last profit period date

An example of this inquiry screen is given in the following figure:

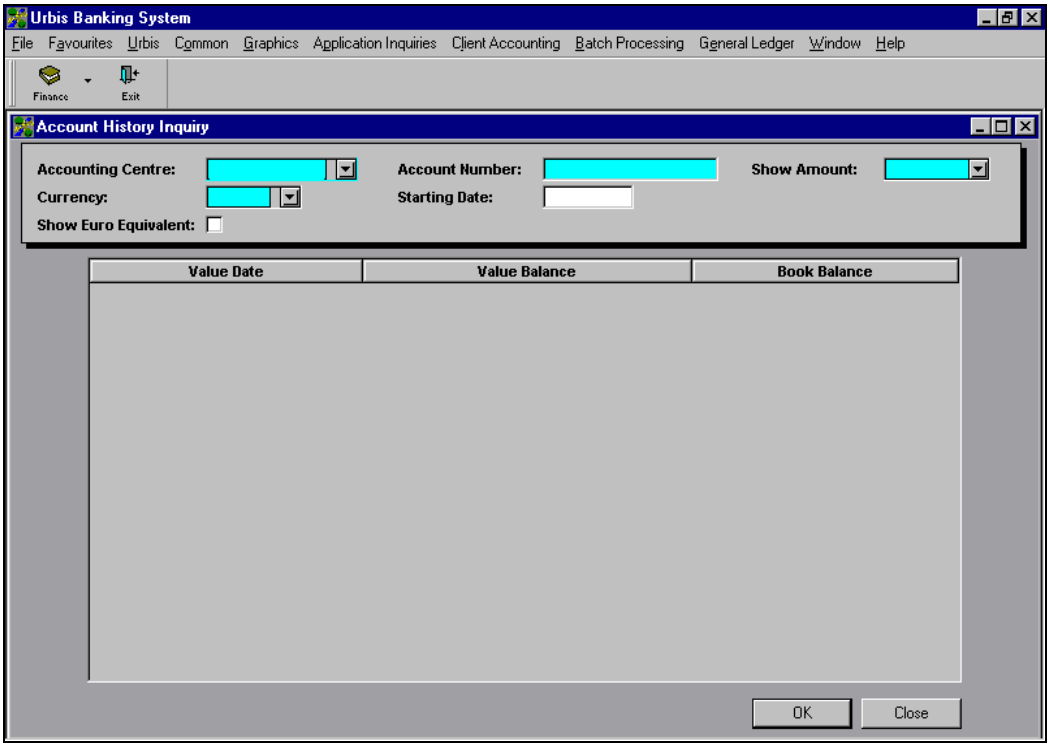

Figure 4–34. Account History Inquiry screen

Client Accounts in Overdraft Inquiry (CAODI)

Use this screen to view the client accounts that are currently in overdraft. You can apply the following filters either individually or in any combination to limit the results obtained by the inquiry; Start Accounting Centre, NBC Accounts Only, GL Backing Account, Currency, and Start Account.

From this screen you can link to other screens to inquire further on an account. To do this, highlight an account and click either the **Client Account**, **Statement Inquiry**, **Journal Inquiry**, or the **Posting Inquiry** button to go to the Client Account Inquiry (CAACI), Statement Inquiry by Date (STMTD), Journal Inquiry by Value Date (JRNLI), or the Postings Inquiry by Account (POSTI) screen respectively.

The following figure is an example of the Client Accounts in Overdraft Inquiry (CAODI) screen.

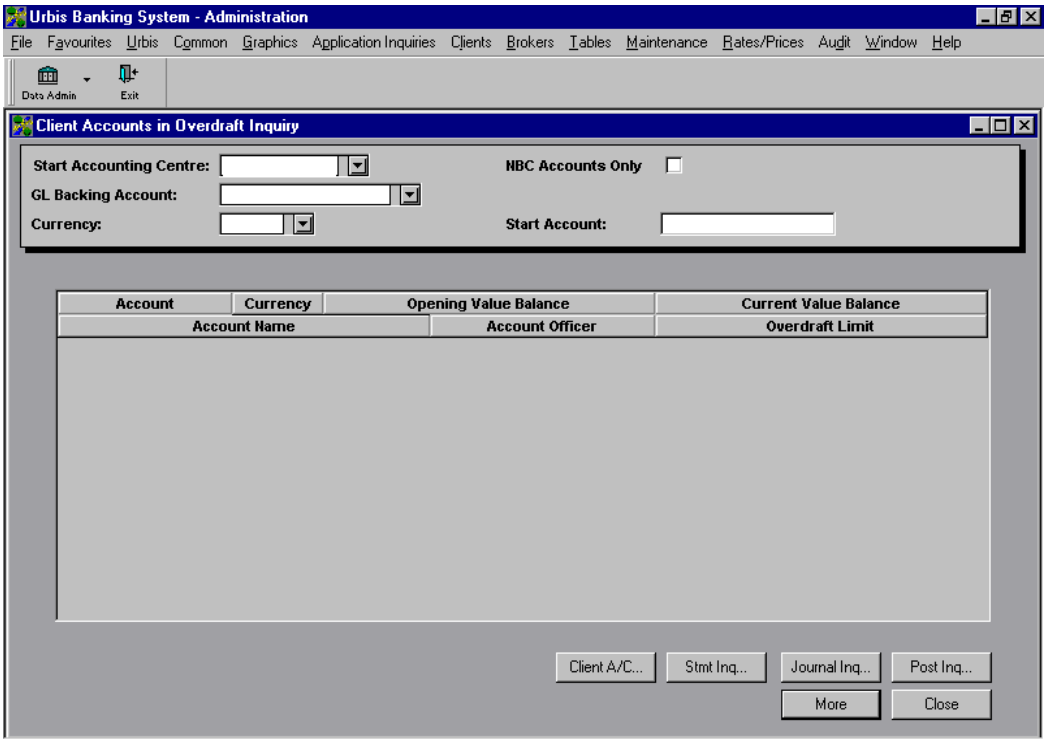

Figure 4-35. Client Accounts in Overdraft Inquiry screen

Hold Funds Inquiry (HOLDI)

This inquiry shows details of funds held on a client account from a specified hold number. This inquiry can be used on both and retail client accounts.

You select a client account using the Selecting a Client process described in Section 2 of this guide. You may then indicate a particular “Hold Number” from which you wish the inquiry to begin. Details of held funds are set up on the Hold Funds (HOLDM) screen.

An example of this inquiry screen is given in the following figure:

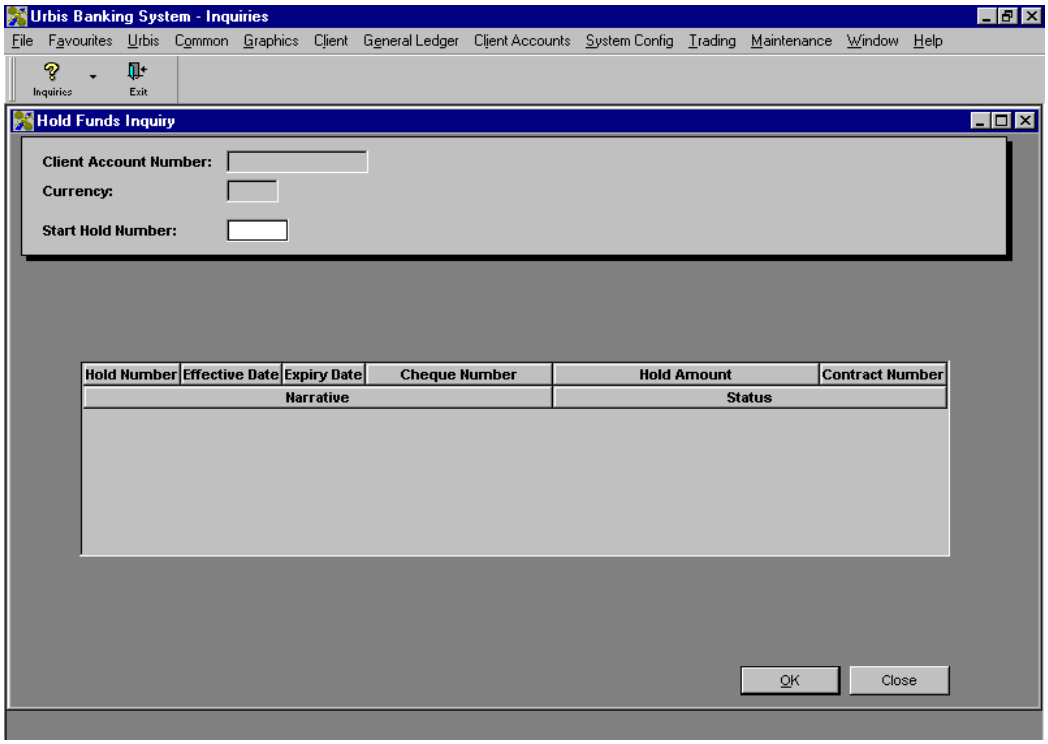

Figure 4–36. Hold Funds Inquiry screen

Interest Conditions Inquiry (INTSI)

This inquiry shows a summary of the interest conditions that apply to an account from a specified start date. For further details of interest conditions, recall the Interest Conditions (INTSM) screen for the account. For example, it will be necessary to use the Interest Conditions (INTSM) screen to view several interest rates and levels if 'All Up' or 'Slice' conditions apply.

An example of the Interest Conditions Inquiry screen is given in the following figure:

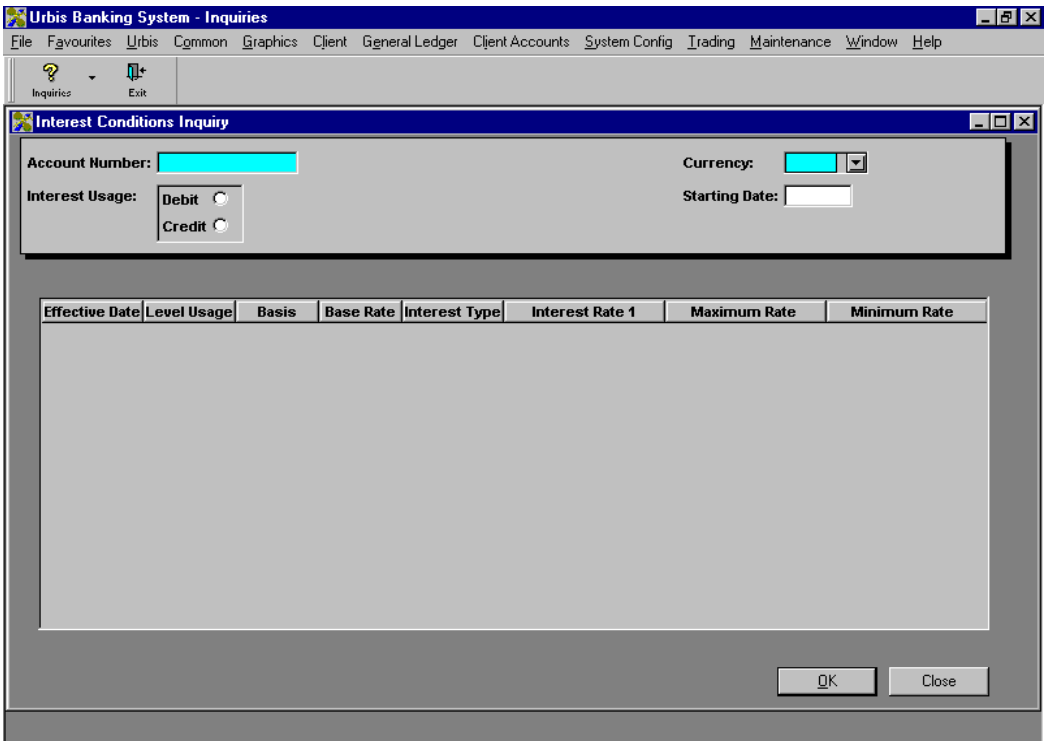

Figure 4–37. Interest Conditions Inquiry screen

Postings Inquiry By Account (POSTI)

This inquiry shows the amount and description of the postings made to a specified General Ledger or client account from a specified date. Only events, which cause the balance to be updated, are displayed. The inquiry screen Statement Inquiry By Date (STMTD), can also be used to view the current details of postings made to a General Ledger or client account. Statement Inquiry By Date (STMTD) also displays the last posting date, and the opening and closing balances for the account inquired upon. If extended narrative exists, icon is displayed and double clicking on it will open the pop up window to view the extended narrative.

If the POSTUPD - Update Postings report is running as a sleeping report, the postings are made as soon as transactions are entered. In this situation, the Postings Inquiry By Account (POSTI) screen will display the current position.

After the end-of-day operations have been performed for a day, all transactions will have been generated and all postings made to the General Ledger and client accounts. An account's postings for that day can then be displayed on the Postings Inquiry By Account (POSTI) screen. Either the batch number (for all manual postings) or the contract number (for contract generated postings) will be separately displayed against the posting line.

From this screen it is possible to link to the LA Postings Inquiry By Account (LPSTI) screen, if you have the Loans Administration (LA) module, highlight the required postings entry, and click on **LA Postings**.

An example of the Postings Inquiry By Account screen is given in the following figure:

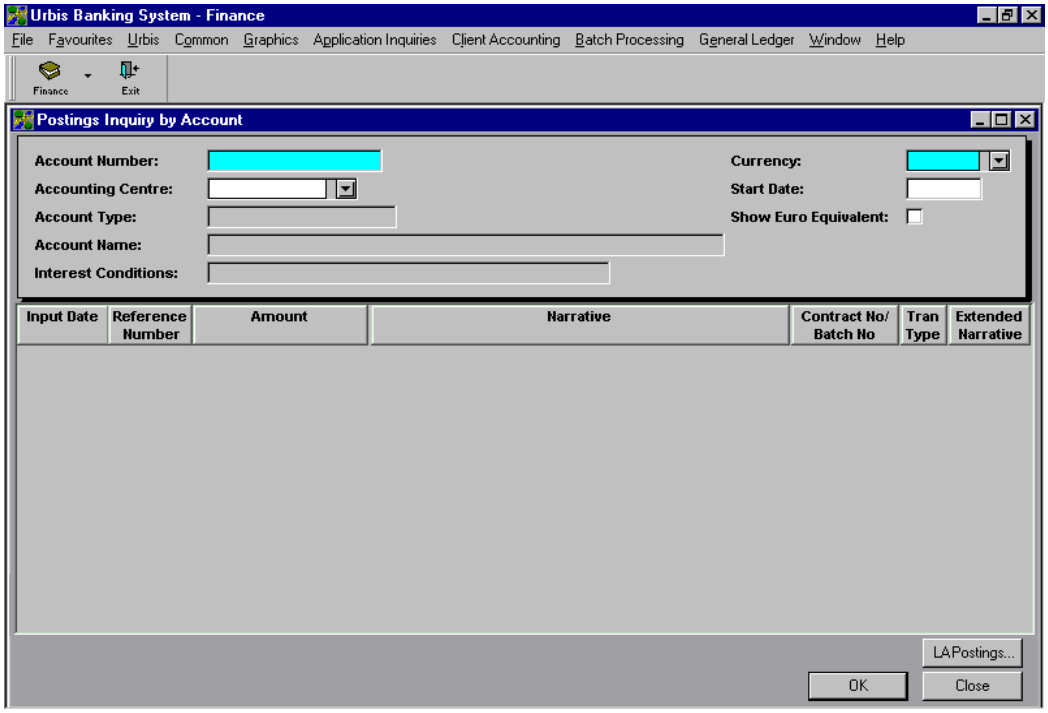

Figure 4–38. Postings Inquiry By Account screen

Postings Inquiry By Number (POSTN)

This inquiry shows the amount and description of all postings made to a general ledger or client account included on the statement specified. An option enables you to produce the inquiry from a selected date. If extended narrative exists, icon is displayed and double clicking on it will open the pop up window to view the extended narrative.

Note: *The "Statement Number" is updated each time the CASTMTS - Client Account Statements report is run.*

Either the batch number (for all manual postings) or the contract number (for contract generated postings) will be separately displayed against the posting line.

From this screen it is possible to link to the LA Postings Inquiry By Number (LPSTN) screen, if you have the Loans Administration (LA) module, highlight the required postings entry, and click on **Postings**.

An example of the Postings Inquiry By Number screen is given in the following figure:

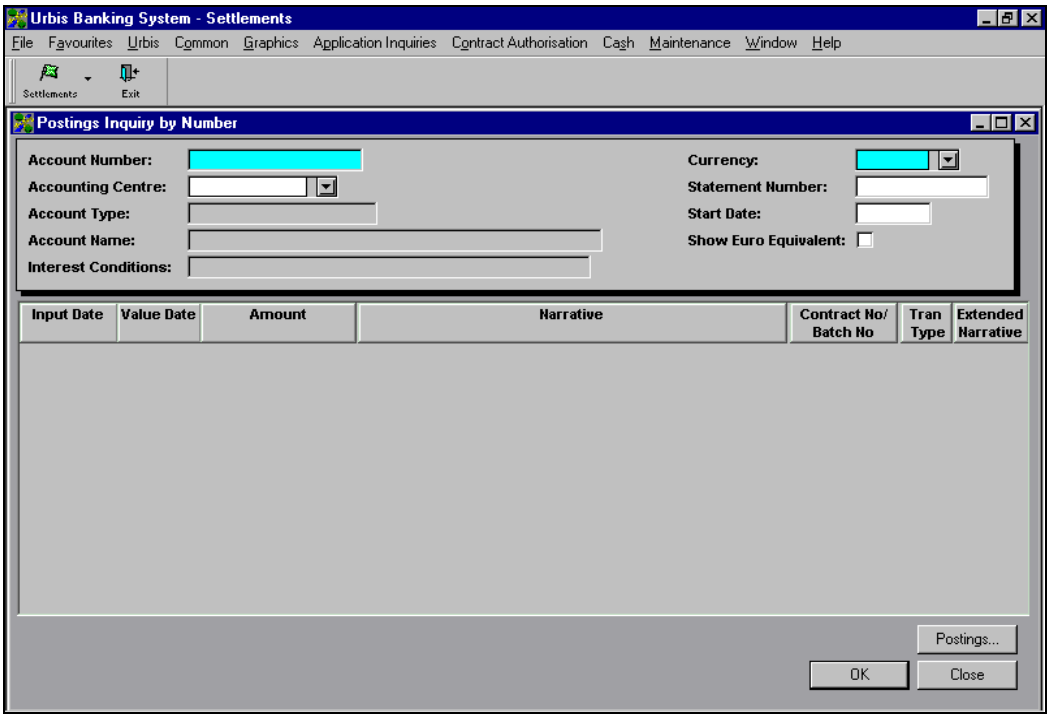

Figure 4–39. Postings Inquiry By Number screen

Statement Inquiry By Date (STMTD)

This inquiry shows the amount and description of postings made to a general ledger or client account from a specified input date. Opening and closing book balances are also displayed. Either the batch number (for all manual postings) or the contract number (for contract generated postings) is separately displayed against the posting line. If extended narrative exists, icon is displayed and double clicking on it will open the pop up window to view the extended narrative.

The Statement Inquiry By Date (STMTD) screen can only display up-to-date details if the POSTUPD - Update Postings report is running. After the end-of-day operations have been performed the postings made to the general ledger and client backing accounts for that day can be displayed.

An example of the Statement Inquiry By Date screen is given in the following figure:

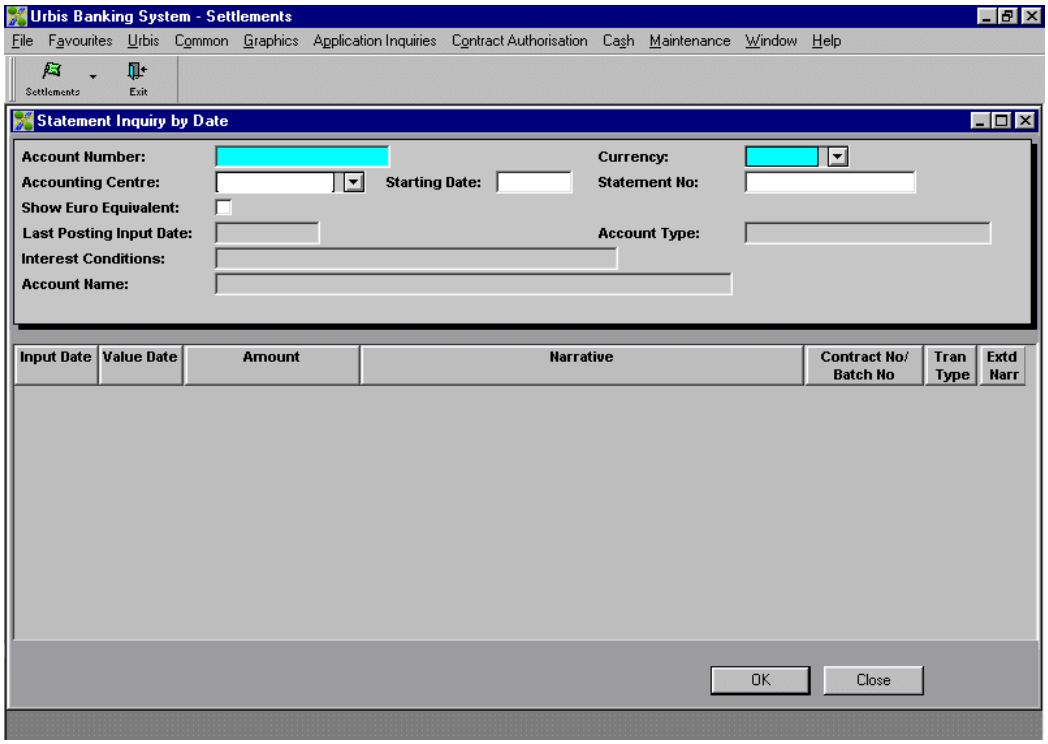

Figure 4–40. Statement Inquiry By Date screen

Journal Inquiry By Value Date (JRNLI)

This inquiry shows the amount and description of postings made to a general ledger or client account from a specified value date. The book and value balances are also displayed.

The Journal Inquiry By Value Date (JRNLI) screen can only display up-to-date details if the POSTUPD - Update Postings report is running. After the end-of-day operations have been performed the postings made to the general ledger and client backing accounts for that day can be displayed. Either the batch number (for all manual postings) or the contract number (for contract generated postings) will be separately displayed against the posting line.

If extended narrative exists, icon is displayed and double clicking on it will open the pop up window to view the extended narrative.

An example of the Journal Inquiry By Value Date screen is given in the following figure:

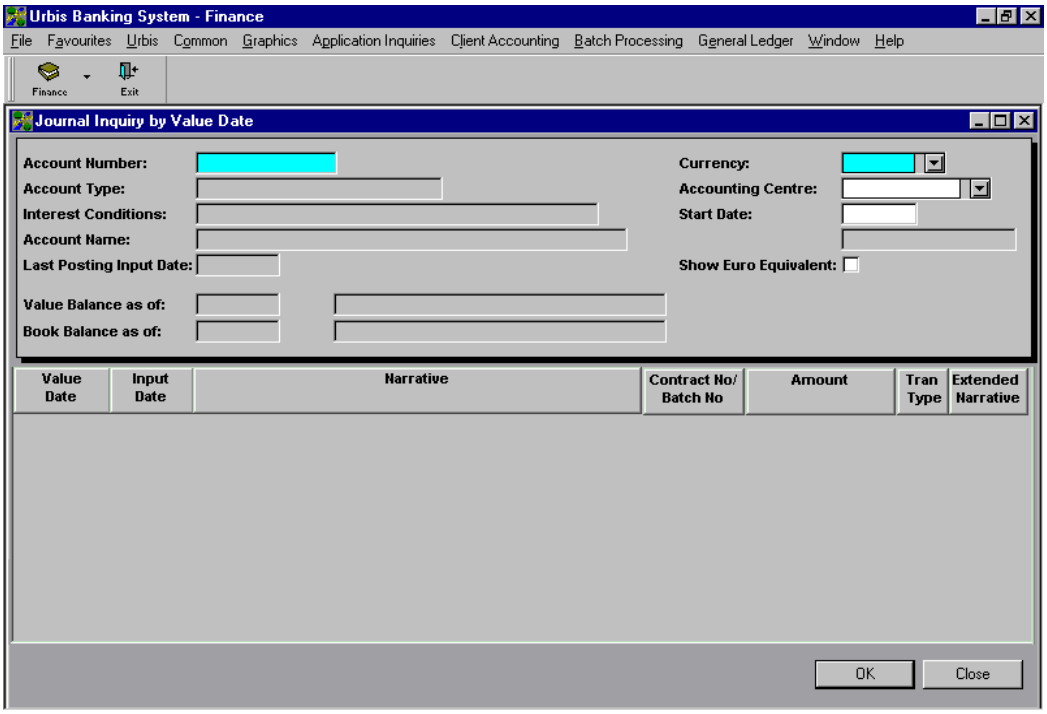

Figure 4–41. Journal Inquiry By Value Date screen

Stopped Cheques Inquiry (STOPI)

This inquiry shows details of stopped cheques for a specified account from a specified cheque number. If the cheque has been presented, a message is included in the narrative.

An example of the Stopped Cheques Inquiry screen is given in the following figure:

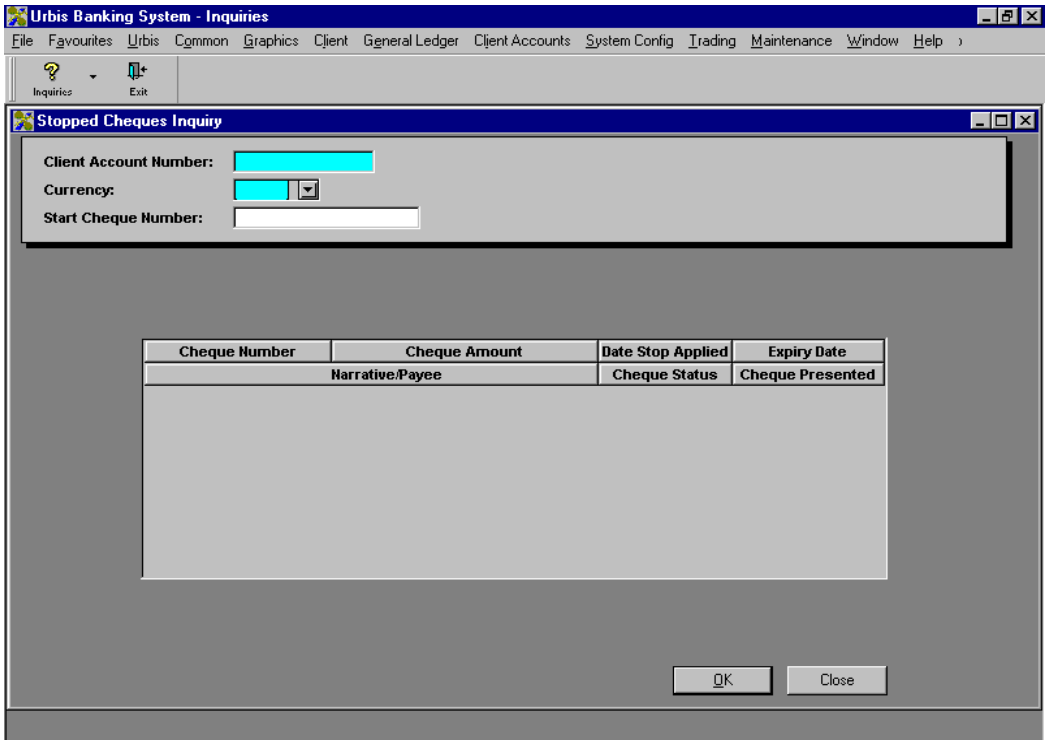

Figure 4–42. Stopped Cheques Inquiry screen

Batch Inquiry (BTCHI)

Use this screen to inquire on the status of the batches in Urbis. You can limit the search in various ways, either singly, or in any combination.

- To limit the inquiry to batches of a certain status, enter the required status in the Batch Status field
- To limit the inquiry to batches opened after a certain date, enter the date in the Start Date field
- To limit the inquiry to batches after a certain number, enter the number in the Start Batch Number field

From the Batch Inquiry (BTCHI) screen you can link to the following screens:

- Batch Header (BHEAD), where you can open an unreconcilled batch
- Batch Close (BCLOS), where you can close an unreconcilled batch
- Management Services Transaction Maintenance (CATRM), where you can enter a new paired transaction to the selected batch (see Appendix C for further details of paired transactions)
- Batch Detail Inquiry (BTDTI), where you can inquire on the individual transactions contained in a batch

To link to the above screens, highlight a batch and click either the **Details**, **Transaction**, **Batch Close**, or **Batch Open** button to go to the Batch Detail Inquiry (BTDTI), the Management Services Transaction Maintenance (CATRM), the Batch Close (BCLOS), or the Batch Header (BHEAD) screen respectively.

You can use the Batch Inquiry (BTCHI) screen to reverse a batch that has been entered previously into the system. A new batch is created with transactions that are the reverse of those in the original batch. To do this. highlight the batch you want to reverse and click the **Reverse** button.

If you are using batch authorisation, use the Batch Inquiry (BTCHI) screen to begin the batch authorisation process. Batch Authorisation cannot be used in conjunction with Client Account Management Services (CMS). Batch Authorisation is set up using the BP-ATH-REQ-BATCH and BP-DUAL-ATH blueprint parameters. The authorisation link will only work if these blueprint parameters have been set on your system. For more information on blueprint parameters, see the *Guide to Setting Up*. For more information on batch authorisation, see the *General Ledger Administration Guide*. By selecting a batch with the status of Unauthorised (A) or Checked (K), you can link through to the Batch Authorisation (CABAA) screen to authorise the batch. To do this, highlight the batch you want to authorise and click the **Authorise** button.

The following figure shows an example of the Batch Inquiry screen.

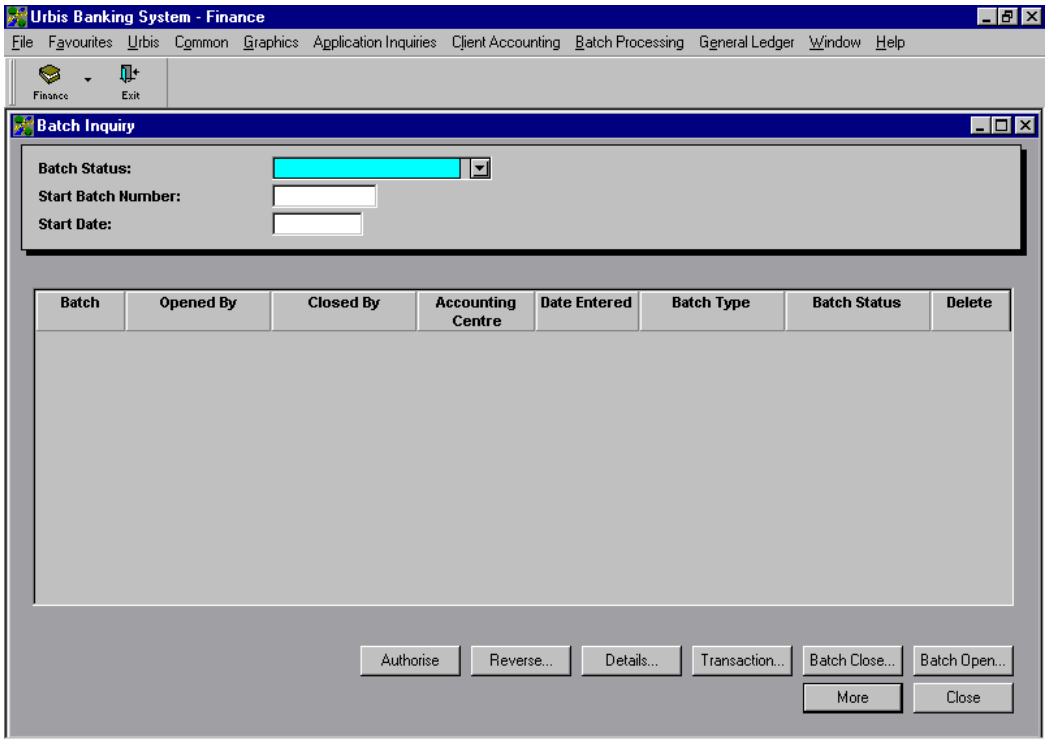

Figure 4-43. Batch Inquiry screen.

Batch Detail Inquiry (BTDTI)

Use this screen to inquire on the details of a batch. The batch status is shown, along with all the transactions and postings that are included in the batch. The total amounts and number of items are also shown. If BP-EXTD-NARR is set to YES and extended narrative exists, icon is displayed and double clicking on it will open the pop up window to view the extended narrative.

If you do not know the batch number of the batch you want details on, you can use the Batch Inquiry (BTCHI) screen to provide a list of all the batches in the system. This screen is described earlier in the section.

From the Batch Detail Inquiry (BTDTI) screen, you can link to the Management Services Transaction Maintenance (CATRM) screen by highlighting a batch and clicking the **Transaction** button.

The following figure shows an example of the Batch Detail Inquiry screen.

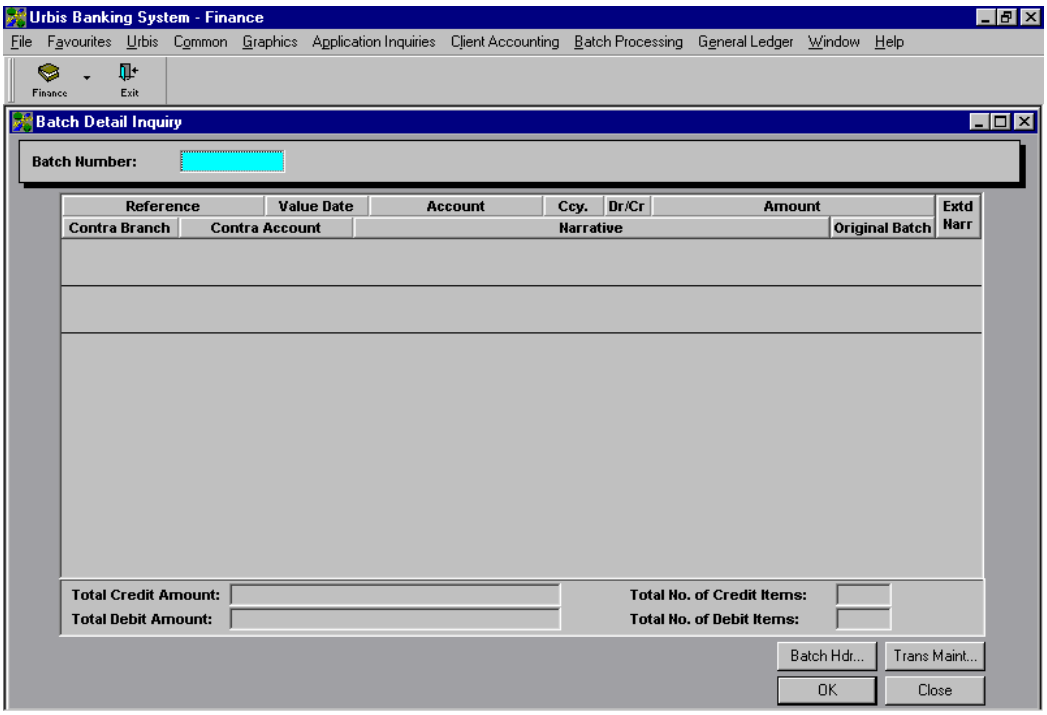

Figure 4-44. Batch Detail Inquiry screen

Client Account Reports

The system contains various reports to help in maintaining clients, and inquiring on their details. Here is a list of reports you may find useful, you can find out further information in *On-Demand Reports Guide*:

- ACCHARGE - Client Accounts with Low Average Balance
  This report produces a list of the clients accounts that have an average balance below a specified amount for a given month.
- CAACBAL - Client Account Balances
  This report lists the book and value balances for client accounts.
- CAACDTL - Client Account Details
  This report lists full details for all client accounts, selected client accounts, or all client accounts within an accounting centre.
- CAACLST - Client Accounts List
  This report provides summary details of client accounts.
- CAACOD - Client Account Overdraft List
  This report provides details of client accounts that have exceeded their overdraft limit, or passed their overdraft expiry date.
- CAACTURN - Client Account Turnover
  This report lists debit and credit movements and total turnover for client accounts for the full periods specified.
- CAHOLDS - Client Account Held Funds List
  This report lists funds held on client accounts and gives details of them.
- CAINT - Client Account Interest Statements
  This report prints details of the debit and credit interest payments and charges that have contributed towards interest settlements for client accounts.
- CAJOURNAL - Client Accounts Postings Journal
  This report provides a complete list of the day's balances based on book balance and postings to all client accounts.
- CASTMTS - Client Account Statements (see the *Overnight Reports Guide*)
  This report produces due and overdue statements for client accounts.
- CASTOPS - Client Account Stopped Cheques List
  This report provides a complete list of stopped cheques.
- CLSDACTS - Closed Accounts List
  This report lists all accounts that have been closed in the system.
- CUSTSTMT - Client Statements
  This report produces statements of the postings to client accounts over a specified period.

Section 5
Automatic Payments

Introduction

Standing orders may be drawn against any type of account (including general ledger accounts). The beneficiary of the funds from a standing order can be a client of:

- Your own institution (internal)
- An external bank that is a member of the supported clearing system (domestic)
- An external bank that is not a member of the supported clearing system (foreign)

When a standing order is debited in favour of an external beneficiary, the client's account is debited and an entry placed in a file of clearing credits during overnight processing. There are separate files for domestic and foreign accounts.

You can set up the following types of standing order:

- Client Account to Client Account
- Client Account to external third party account
- Client Account to General Ledger
- General Ledger to General Ledger
- General Ledger to Client Account
- General Ledger to external third party account

For standing orders that apply to general ledger accounts, you can apply the transfer to an account set up for all accounting centres and/or all currencies (where the payment type, described below, is "Full Balance"). This enables transfers on either a "many to one" or a "many to many" basis, and so avoids the need for repetitive data-entry.

For all the new standing orders, you can set a 12 digit Standing Order number by setting a value for the blueprint BP-SO-PFX. The format is ppffffff0000, where the value (2 digit) set for the blueprint is used as the prefix followed by 4 digit Standing Order number with 6 digit number incrementing from 000001 for every clean payment created. If the set value is 0 (default) then the system will continue to generate 10 digit standing order number.

The amount that is transferred by a standing order need not be a fixed amount, the following additional ‘Payment Types’ are available:

- Full balance
- Minimum balance
- Maximum amount
- Above Maximum balance

Different Payment Types can be applied to the first payment, interim payments and the final payment.

You can use standing orders to sweep funds from one account to another.

Processing Standing Orders

Once a standing order has been successfully created in the system, it undergoes balance checking before being posted to the account. If the standing order is to an external account, then S.W.I.F.T. messages are created.

Balance checking is performed to ensure sufficient funds are available in the debit account. If there are sufficient funds, processing proceeds as normal. If funds are not available, the standing order is sent to the authorisation queue. Standing orders that are debiting General Ledger accounts do not undergo balance checking.

The authorisation queue for standing orders can be viewed using the Standing Order Authorisation Queue (SOAHI) screen. You can then choose the standing orders to authorise on the Standing Orders Input (SOSTM) screen.

The authorisation queue for clean payments can be viewed using the Clean Payments from Standing Orders (SOPRQ) screen. To view internal or external standing order products on the queue, enter a product based on the following contract types:

- SOEX for external standing orders
- SOSO for internal standing orders

You can choose the standing orders to authorise on the Clean Payments Authorisation (CPAUT) screen. See the *Settlements Guide* for more information on this screen.

For accounts that require a Negative Balance Check before postings are debited from that account, there is a different process for balance checking, described in Standing Orders and Client Account Management Services below.

Once the standing order has been authorised, the CPAYMENTS - Clean Payment Processing report deals with processing of the payments. For payments to external accounts, this report also creates S.W.I.F.T. messages, which must be authorised before release on the Authorise Release of Event Messages (SETTA) screen, described in the *Settlements Guide*.

Standing Orders and Client Account Management Services

Client Account Management Services (CMS) are a set of optional functions in the system that allows greater control of client accounts. One of these functions is Negative Balance Checking, and any standing order due to be debited to an account marked as requiring a negative balance check is affected. For full details of CMS, see Appendix C of this guide.

After a debit payment to an account that requires a negative balance check has been authorised, it is moved onto a Pending Queue, acquiring the status of 'Pending'. Once on the queue, the payment can be released in the following ways:

- The system can release a payment when sufficient funds are available on the account. The sleeping report RELPENDQ - Release from Pending Queue handles this automatically (this report is described in the *On-Demand Reports Guide*).
- You can force the release of a payment, regardless of sufficient funds being available. This is done from the Management Services Queue (BANQI) screen, described in Appendix C of this

guide.

Once the payment has been released from the pending queue, it is processed in the same way as other clean payments, using the CPAYMENTS - Clean Payments Processing report.

The above functionality can be activated using the blueprint parameter BP-EXTRA-ACC, described in Blueprint Parameters in the *Guide to Setting Up*. An account is defined as requiring a negative balance check on the Management Services Extra Details (CAEXM) screen, described in Appendix C of this guide.

Standing Order Screens

The following screens are described in this section:

Standing Order Addition Screens:

- Standing Order Input (SOSTM)
- Clean Payment Message Input Screen One – 103 (CP100)
- Clean Payment Message Input Screen Two – 103 (CP101)
- Clean Payment Message Input Screen Three – 103 (CP102)
- Clean Payment Message Input Screen Four – 103 (CP103)
- Clean Payments Message Input Screen One – 202 (CP202)
- Clean Payments Message Input Screen Two – 202 (CP203)

Standing Order Inquiry Screens:

- Standing Order Inquiry Lead-In (SOSLI)
- Standing Order Master Details Inquiry (SOSTI)
- Clean Payments from Standing Orders (SOPRQ)
- Standing Orders Authorisation Queue (SOAHI)
- Standing Order Event Inquiry (SOHOI)
- Standing Order Event By Date Inquiry (SOHDI)

For each screen the following is provided:

- A description of its use
- An example of the screen

A full description of the fields on the screens, and valid entries, is given in Section 6, Definition of Field Names.

Please refer to the *Starter's Guide* for a description of how to access and use screens and use the Client and Account Selection process.

Standing Orders Input (SOSTM)

The Standing Orders Input (SOSTM) screen is used to enter the following types of standing order, defined in the Standing Order Type field:

- Client Account to Client Account
- Client Account to external third party account
- Client Account to General Ledger
- General Ledger to General Ledger
- General Ledger to Client Account
- General Ledger to External third party Account

You identify the account for which a standing order is to be created by completing:

- The Credit Account Identifier field if the account is held at your own bank
- The Pay Nostro field if the credit account is external to your bank and the debit account is not a retail account

For new standing order, the 12 digit unique standing order number is generated by the system and when linking from Standing Orders Inquiry Lead (SOSLI) or Standing Orders Authorisation Queue (SOAHI), the standing order number will be pre-filled.

When SOSTM is linked from SOSLI, the authorized definition will be shown to user. When SOSTM is linked from SOAHI, the new definition pending authorization will be displayed to user.

If the standing order is from an Internal Account (either Client or General Ledger) to an External Account, you can also complete the MT103 Addition screens, the MT202 Addition screens, or both of these if using the cover method. You must decide which S.W.I.F.T. message or combination of messages is relevant. Three S.W.I.F.T. messages are appropriate in different circumstances:

- MT103 - Customer Transfer.
- MT202 - Institution Transfer for Third Party Bank.
- MT210 - Notice to Receive. An MT210 is created automatically if a Nostro account is entered as the debit account, and the "MT210 Advice Via S.W.I.F.T." field on the Nostro Details (NSTRO) screen is set to Yes.

To create an MT103, switch 'On' the “Create/Amend MT103” field.

To create an MT202, switch 'On' the “Create/Amend MT202” field

The payment message is not mandatory for External standing order, i.e. you can enter a Standing order to credit a Nostro account without sending any payment messages. Also the system allows the standing orders that credit a Client account a GL Account to have payment messages sent with every event.

When creating an MT103 or MT202, you should complete the details on the Standing Orders Input (SOSTM) screen first. In so doing, the system will be able to pre-fill many of the fields on the S.W.I.F.T. message production screens. Pre-filled information will differ depending on the type of S.W.I.F.T. message required. When amending a S.W.I.F.T. message, the old message will be deleted by the system, and the basic message derived from the information on the screen will be re-displayed. To inquire on a S.W.I.F.T. message, use the Clean Payments from Standing Orders (SOPRQ) screen, described in the *Settlements Guide*.

Notes: *The Cross Currency "Exchange Rate", "Bought Accounting Centre" and "Sold Accounting Centre" fields are mandatory when different currencies are entered in the Debit and Credit Account Number fields. The "Currency of Transfer" cannot be changed. This can only be effected by cancelling the standing order and entering a new one.*

The "Transfer/Minimum Amount" and "Transfer Type" fields are only mandatory when the Payment Type is either "Minimum Balance" or "Above Maximum Balance".

*When the Debit Account is a client account, the account's general ledger backing account is used to determine a general ledger master. This general ledger master is then used to derive the postings to be made via the accounting model (see "*Setting Up Accounting Models*" in the* Guide to Setting Up*).*

If the blueprint parameter BP-EXTD-NARR is set to YES, the system permits extended narratives for standing orders. The 5 additional lines referred to as 'Extended Narrative' are maintained (added/ changed/ deleted/ inquired) on the Extended Narratives pop up window.

To enter the extended narrative, double mouse click the Notepad icon next to narrative field and it opens the Extended Narratives pop up window. If the extended narrative exists, the Notes icon is displayed. On the extended narratives pop up window the first line as entered on the standing order screen will be displayed and the following five lines can be entered. Click "Ok" to transfer the data to the SOSTM screen or Click "Close to close the window without the changes the data or Click "Clear" to remove the data.

Multiple Transfers

You can specify all accounting centres and/or all currencies for a single standing order of the type GL (where the payment type, described below, is "Full Balance"). This enables transfers on either a "many to one" or a "many to many" basis, and so avoids the need for repetitive data-entry. The purpose of this facility is to enable you to easily reset general ledger account balances to zero following period end.

For a many to one transfer, enter asterisks in the "Debit Accounting Centre" and/or currency part of the "Debit Account Number" field, to denote where a multiple transfer is required. Enter the required accounting centre and currency mnemonics in the "Credit Accounting Centre" and currency part of the "Credit Account Number" field.

For a many to many transfer, enter asterisks in the "Debit Accounting Centre" and "Credit Accounting Centre", and/or currency parts of both the "Debit Account Number" and "Credit Account Number" fields, to indicate where the multiple transfer is required.

Payment Type Field

Each payment amount must be identified as being of a certain type (“Payment Type”), using one of five options. The amount entered as the “Payment Amount” is transferred according to this payment type, as follows:

- Fixed Amount (AM)
  A stated fixed amount (“Payment Amount”) is to be transferred
- Full Balance (FL)
  The whole balance of the account is to be transferred, leave “Payment Amount” blank
- Minimum Balance (MN)
  The amount required to “top up” an account to a stated minimum balance is to be transferred. Enter the minimum balance in the “Payment Amount” field
- Maximum Amount (MX)
  The balance in full, up to a stated maximum amount, is to be transferred. Enter the maximum value in the “Payment Amount” field
- Above Maximum Balance (OA)
  The amount above a stated maximum balance is to be transferred. Enter the value of the maximum balance in the “Payment Amount” field

The numbers 1, 2 and 3 are used to relate payment types with the different payments involved with the standing order, as follows:

- 1 - First Payment
- 2 - Interim Payments
- 3 - Final Payment

You must enter the first payment amount; if you do not enter amounts 2 and 3 the system assumes you wish to make equal payments and uses the first payment amount for the interim and final payments.

Both the payment amount and type can be amended at any time prior to the first payment. Once a payment has been made the amount cannot be changed.

Payment and Transfer Type

With Payment Type “Above Maximum Balance”, Standing Orders can be limited to those that involve significant amounts only. This reduces the extent to which transfers of amounts that are not fixed are made when the amounts themselves are so small as to limit the usefulness of the standing order. The amount of the balance you wish to maintain is entered under “Payment Amount”. Any amount above this value is transferred only if it is not less than the “Transfer/Minimum Amount”.

With Payment Type “Minimum Balance” standing orders may be similarly limited to significant amounts, or you can define conditions that ensure that accounts are only “topped up” when necessary and by minimum transfer amounts. The amount of the balance you wish to maintain is entered under “Payment Amount”. If the account balance is below this value a transfer is made to the account, in order to make up the balance, subject to the following conditions associated with Transfer Type codes:

Exceeds	The posting takes place only if the amount to be transferred to make up the balance is greater than that entered under “Transfer/Minimum Amount”.
Less Than	The amount to be transferred is equal to the value entered as the “Transfer/Minimum Amount”, irrespective of the actual amount required to make up the balance.
Plus	The amount to be transferred is equal to the actual amount required to make up the balance, plus the value entered under “Transfer/Minimum Amount”.

For the Payment Types "Fixed Amount", "Full Balance" and "Maximum Amount" you should not enter a Transfer Type and Transfer/Minimum Amount.

Authorisation

“Authorization” and “Reject” will be allowed if the blue print BP-SO-AUTH is set to “Y”. This blue print indicates if the system uses standing order authorization functionality. Authorisation is disallowed for the user who made the Last Add/Update. The Reject operation will remove the unauthorised record.

When a new Standing Order is added with status “Unauthorised”, the last update details such as Last Update Action, Last Update User, Last Update Date, Last Update Time and Authorized By are displayed.

Whenever an existing standing order is changed, then all fields that are changed will be highlighted during authorization. For new standing orders, screen fields will not be highlighted even if further changes are made during authorization.

User will be unable to authorise if the Entry Complete indicator is not set.

The following figure shows an example of the Standing Orders Input screen.

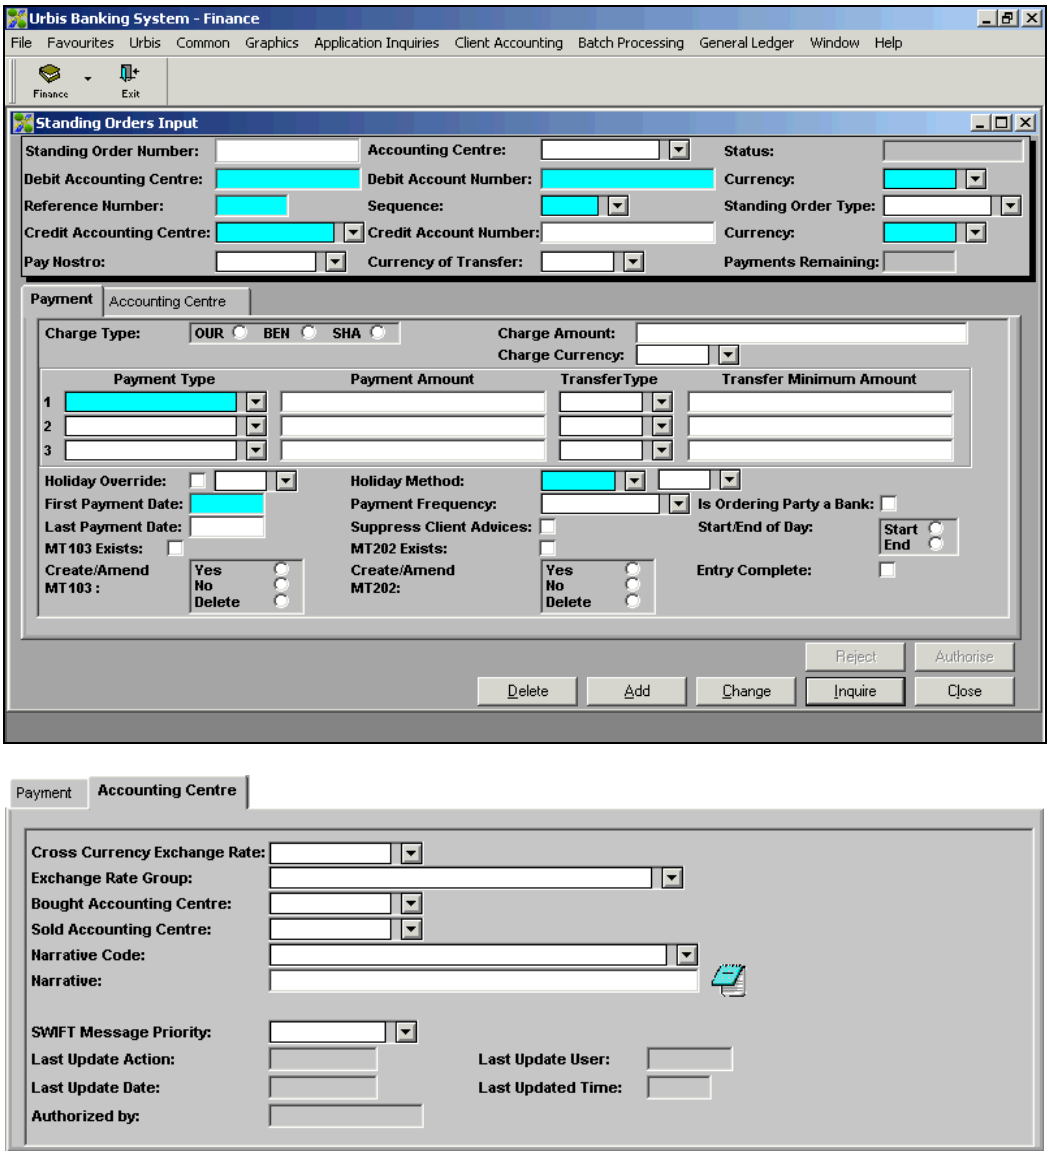

Figure 5–1. Standing Orders Input screen

MT103 Additional Details Screens

Use these screens to enter details into the MT103 - Customer Transfer message. These screens will only be accessed if you entered 'Yes' in the "Create MT103" field on the Standing Orders Input (SOSTM) screen or Outward Clean Payments Amendment (CPAYC) screen. The fields on these screens follow the format of a standard S.W.I.F.T. message. On all the MT103 Additional Detail Screens, there are Tag fields that must be entered along with the field. For more information on appropriate use of tags, see the S.W.I.F.T. documentation.

For an unauthorised Standing order, if a change is authorised using the SOSTM screen, then all the changed fields in all the supporting CPMTx – MT103 screens are highlighted.

A message will only become available on the standard Message Authorisation queue when the associated Clean Payment is Posted after being authorised. On the Message Authorisation queue, you can authorise a message for release by using the Authorise Release of Event Messages (SETTA) screen, see Section 6, Individual Settlement Authorisation.

Clean Payment Message Input Screen One – 103 (CP100)

The following figure shows an example of the Clean Payment Message Input Screen One – 103 screen.

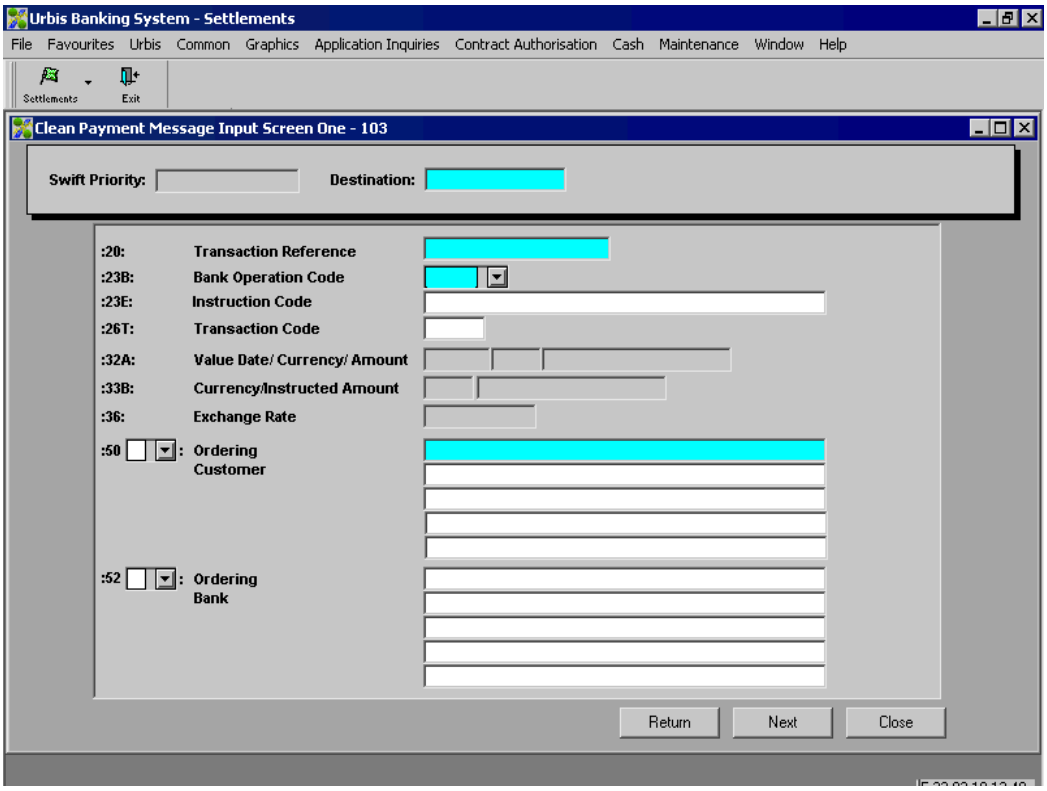

Figure 5-2. Clean Payment Message Input Screen One – 103 screen

Clean Payment Message Input Screen Two – 103 (CP101)

The following figure shows an example of the Clean Payment Message Input Screen Two – 103 (CP101) screen. The surrounding window is not shown, but is similar to that for the Clean Payment Message Input Screen One – 103 (CP100) screen.

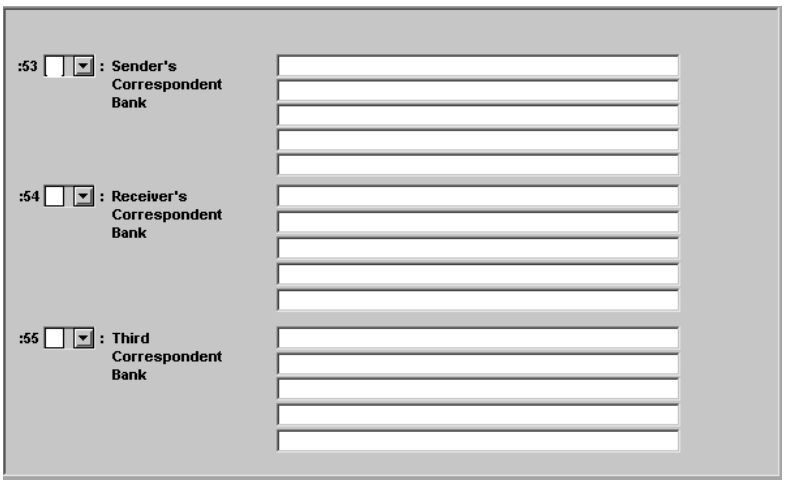

Figure 5-3. Clean Payment Message Input Screen Two – 103 screen

Clean Payment Message Input Screen Three – 103 (CP102)

The following figure shows an example of the Clean Payment Message Input Screen Three – 103 (CP102) screen. The surrounding window is not shown, but is similar to that for the Clean Payment Message Input Screen One – 103 (CP100) screen.

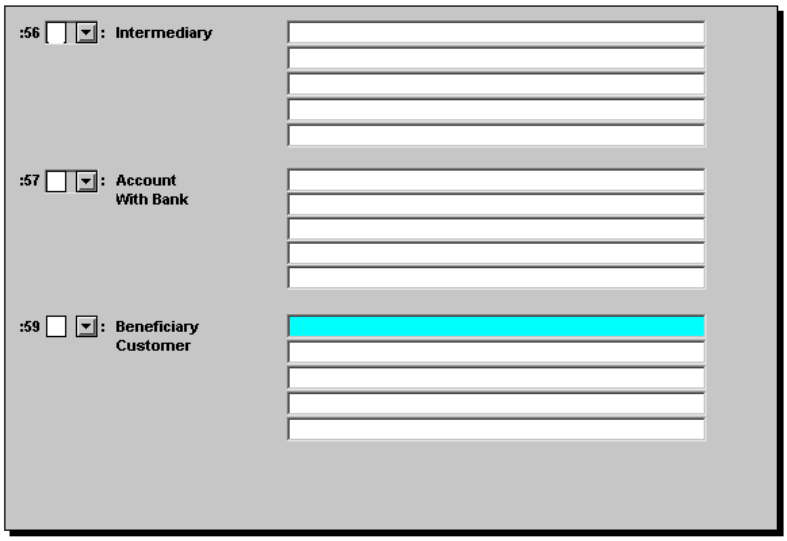

Figure 5-4. Clean Payment Message Input Screen Three – 103 Screen

Clean Payment Message Input Screen Four – 103 (CP103)

The following figure shows an example of the Clean Payment Message Input Screen Four – 104 (CP103) screen. The surrounding window is not shown, but is similar to that for the Clean Payment Message Input Screen One – 103 (CP100) screen.

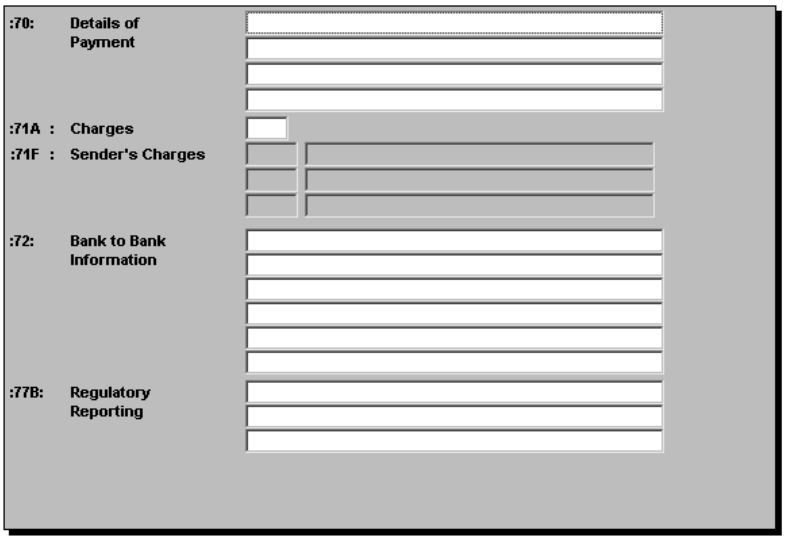

Figure 5-5. Clean Payment Message Input Screen Four – 103 Screen

MT202 Additional Details Screens

Use this screen to enter details into the MT202 - Customer Transfer message. This screen will only be accessed if you selected MT202 or Cover on the Clean Payments Addition (CPAYA) screen. The fields on these screens follow the format of a standard S.W.I.F.T. message.

On all the MT202 Additional Detail Screens, there are Tag fields that must be entered along with the field. For more information on appropriate use of tags, see the S.W.I.F.T. documentation. For an unauthorised Standing order, if a change is authorised using the SOSTM screen, then all the changed fields in the supporting CPMTx – MT202 screens are highlighted.

Once the message has been completed and the clean payment authorised and posted, then it will pass onto the Message Authorisation queue, from where you can authorise the message for release by using the Authorise Release of Event Messages (SETTA) screen, see Section 6, Individual Settlement Authorisation.

Clean Payments Message Input Screen One – 202 (CP202)

The following figure shows an example of the Clean Payments Message Input Screen One – 202 (CP202) screen.

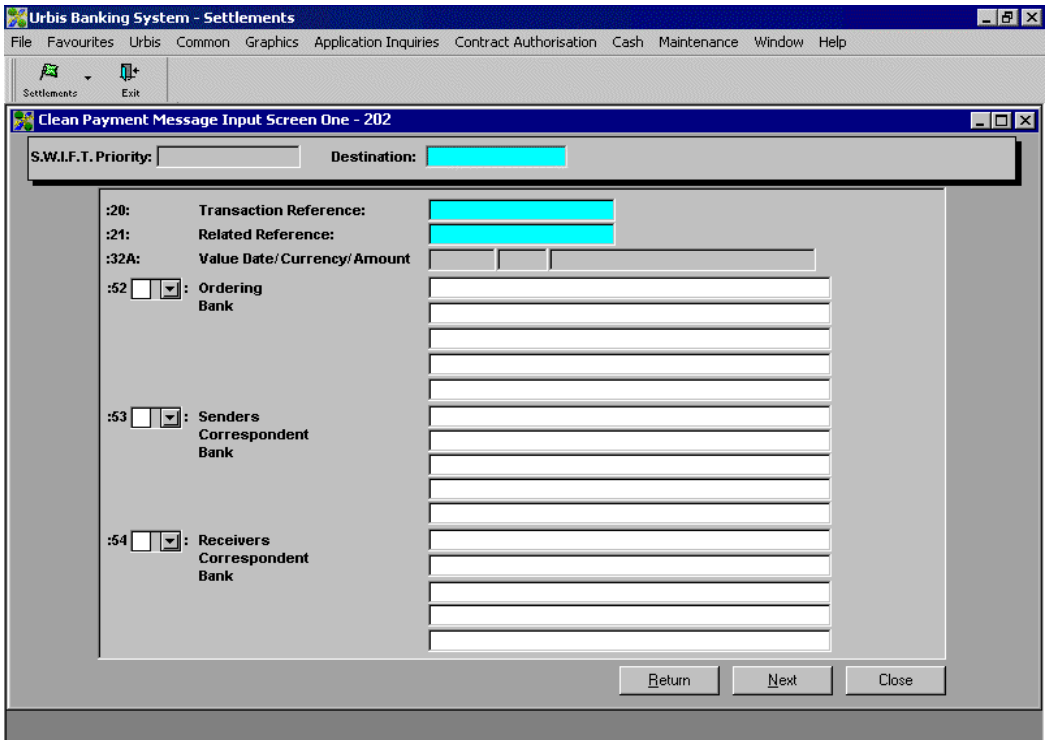

Figure 5-6. Clean Payments Message Input Screen One – 202 screen

Clean Payments Message Input Screen Two – 202 (CP203)

The following figure shows an example of the Clean Payments Message Input Screen Two – 202 (CP203) screen. The surrounding window is not shown, but is similar to that for the Clean Payments Message Input Screen Two – 202 (CP202) screen.

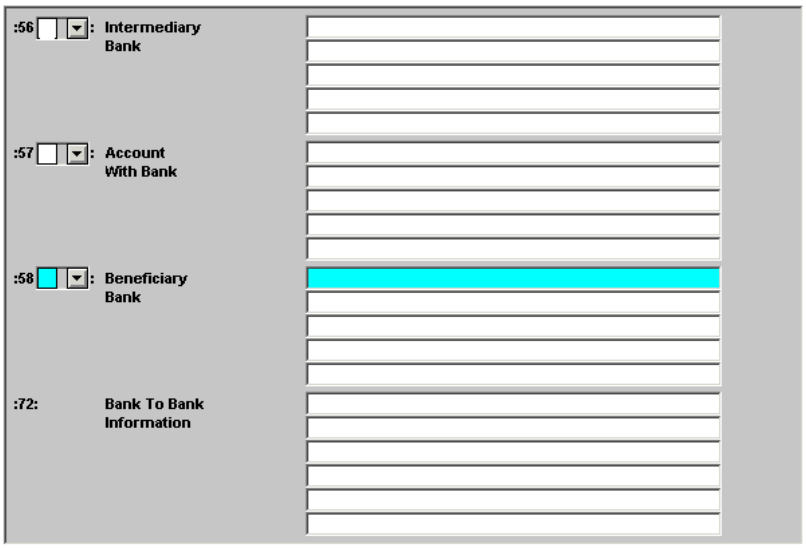

Figure 5-7. Clean Payments Message Input Screen Two – 202 screen

Standing Orders Inquiry Lead-In (SOSLI)

This inquiry screen displays only the authorised standing orders in the system. From here you can link to the Standing Orders Master Details Inquiry (SOSTI) screen to view full details of the standing order.

If any value is entered in the Standing Order field, then the display will be sorted on the provided number. All the Standing orders with the selected status (Active, Cancelled, Deleted, Expired, Unactioned, Unauthorised) can be viewed. The 12 digit Standing Order field will filter to allow standing orders generated for it to be displayed.

To link to the Standing Orders (SOSTI) screen, highlight the standing order on which you want further details and click the **Standing Order Details** button.

To link to the Standing Orders Input (SOSTM) screen, highlight the standing order on which you want to complete or authorise and click the **Standing Order Maintenance** button.

An example of this inquiry screen is given in the following figure:

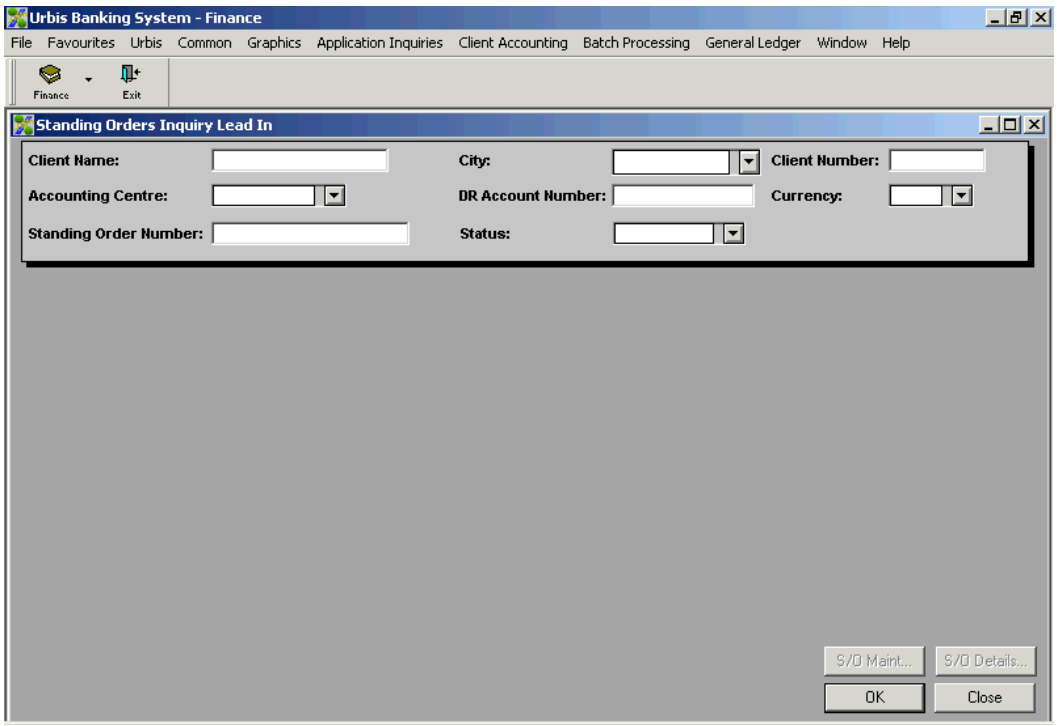

Figure 5-8. Standing Orders Inquiry Lead-In screen

Standing Orders Master Details Inquiry (SOSTI)

This inquiry shows details of a selected standing order including the 12 digit standing order number for a specific client account.

Note: *The Reference Sequence Number field is filled by the system; you cannot enter a value in this field.*

An example of this inquiry screen is given in the following figure:

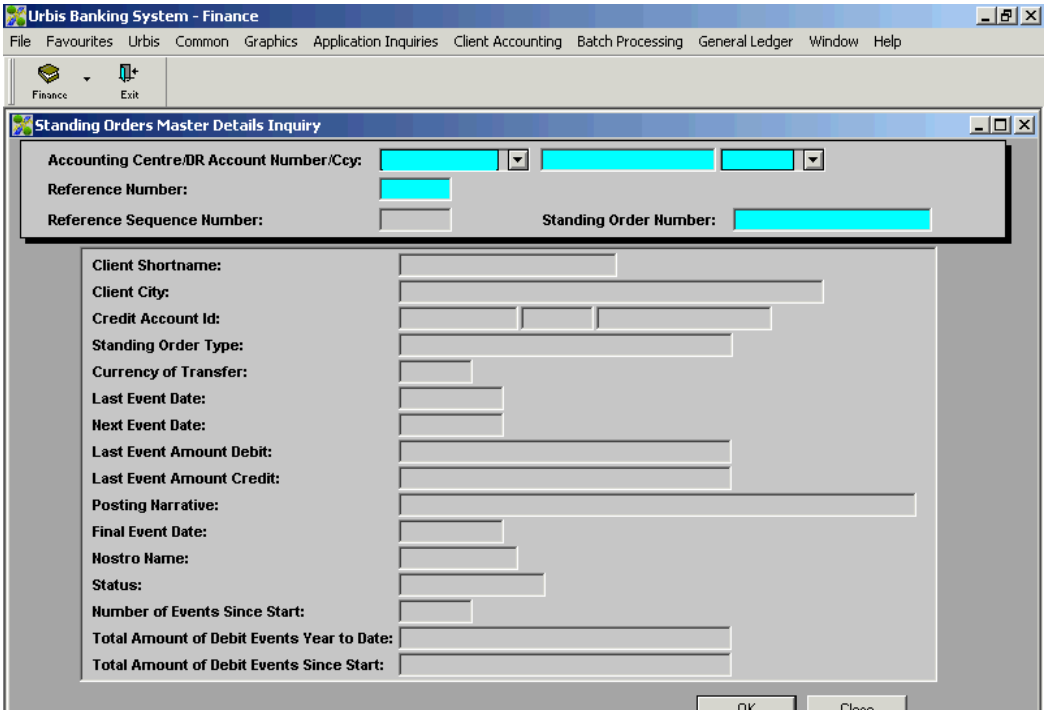

Figure 5–9. Standing Order Master Details Inquiry screen

Clean Payments from Standing Orders (SOPRQ)

This screen allows you to view the clean payments that have been created for the settlement of a standing order. From this screen you can link to the Clean Payments Authorisation (CPAUT) screen to authorise the clean payment for settlement. See the *Settlements Guide* for more information on this screen.

When a standing order is entered into the system, it will be visible on this screen with a contract number of "0", and a status of unauthorised. A clean payment will then be produced with a contract number dependant on the appropriate frequency and payment days in advance of the standing order. The clean payments are the records displayed on this screen that have contract numbers. The 12 digit Standing Order field will filter to allow clean payments generated for it to be displayed.

From this screen you can link to the following screens:

- Outward Clean Payments Inquiry (CPAYI) - for inquiring on the details of a clean payment. To do this, click the **Details** button.
- Clean Payments Authorise (CPAUT) - for authorising a clean payment. To do this, click the **Authorise** button.
- Authorise Release of Event Messages (SETTA) - for reviewing or authorising related messages. To do this, click the **View Message** button.

The following figure is an example of the Clean Payments from Standing Orders (SOPRQ) screen.

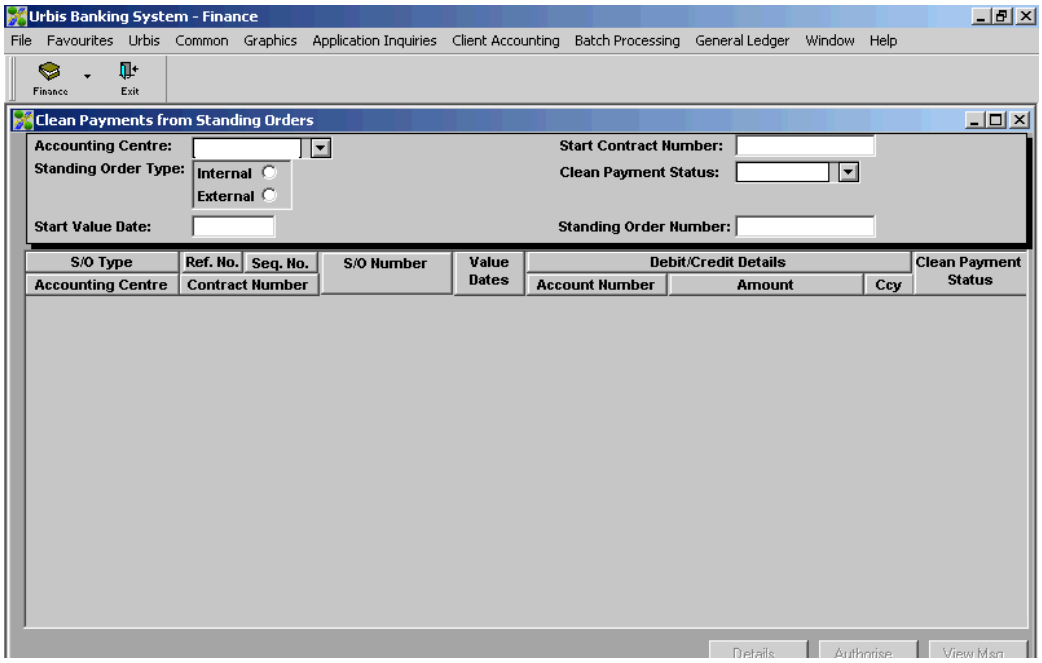

Figure 5–10. Clean Payments from Standing Orders screen

Standing Orders Authorisation Queue (SOAHI)

This screen will list all the standing orders awaiting authorisation. It will include last update details such as Update Date and Time and the User ID.

The screen displays all records from the entered 12 digit Standing Order number and will be sorted on this Standing Order number. To view all the unauthorised standing orders including the incomplete standing orders, check the View Incomplete Standing order. Depending on the value (New, Changed, Deleted and All) set for Update Action, only such Standing Orders are displayed.

To link to the Standing Orders Input (SOSTM) screen - for authorising the unauthorised standing order, click the **Authorise** button.

The following figure is an example of the Standing Orders Authorisation Queue (SOAHI) screen.

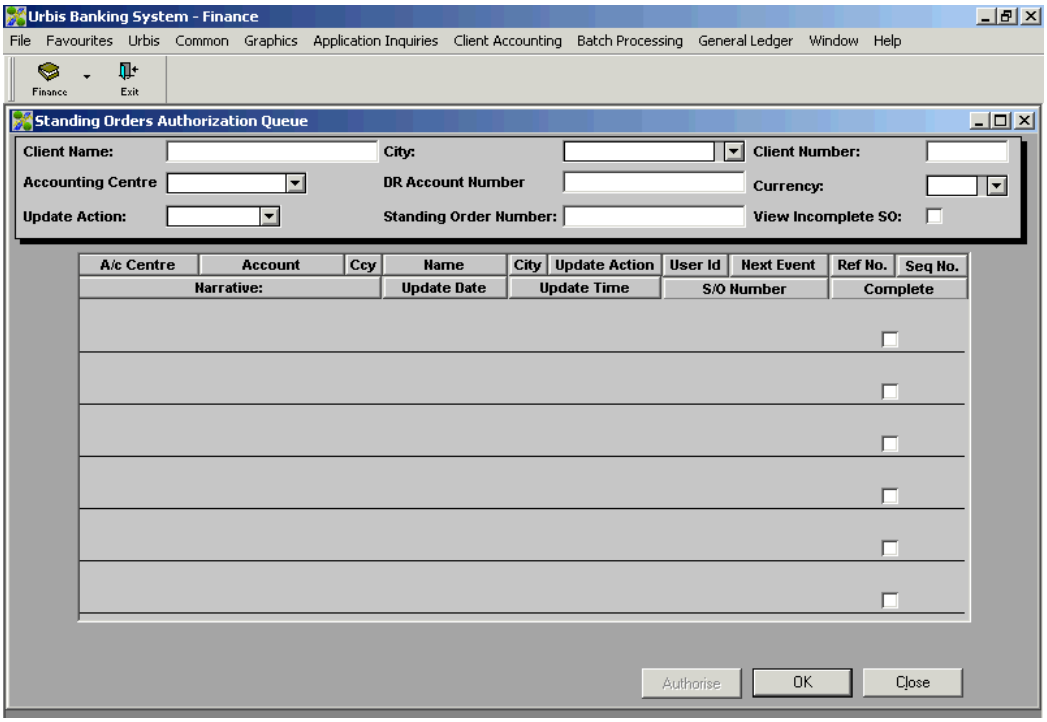

Figure 5–11. Standing Orders Authorisation Queue screen

Standing Order Event Inquiry (SOHOI)

This inquiry displays all standing order events for a specified account.

If the “Inquiry Date” and “Reference Number” fields are left blank, standing order events from the account opening date and onwards are displayed. Alternatively, standing order events from a specific date or reference number can be displayed by entering the required date or reference number respectively. The 12 digit Standing Order field will filter to allow standing orders generated for it to be displayed.

A message is displayed on the bottom line of the screen, indicating whether or not more data is available on a continuation screen.

An example of this inquiry screen is given in the following figure:

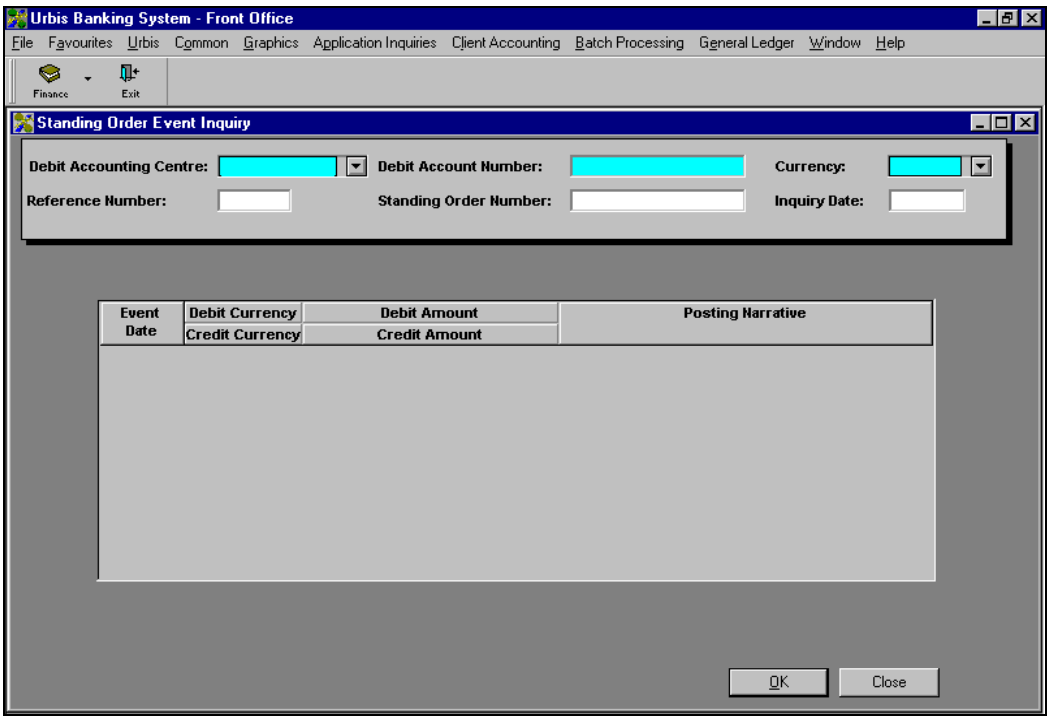

Figure 5–12. Standing Order Event Inquiry screen

Standing Order Event By Date Inquiry (SOHDI)

After the SOEVENT - Standing Orders Events Update report has been run as part of the overnight processing (see the *Overnight Reports Guide* for details), diary events are created which can be inquired upon using this screen.

If the “Debit Account Identifier” and “Reference Number” fields are left blank, standing order events from the first debit account number onwards are displayed. Alternatively, standing order events from a specific debit account number onwards can be displayed by entering the required values in the “Debit Account Identifier” and “Reference Number.” fields. The 12 digit Standing Order field will filter to allow standing orders generated for it to be displayed.

An example of this inquiry screen is given in the following figure:

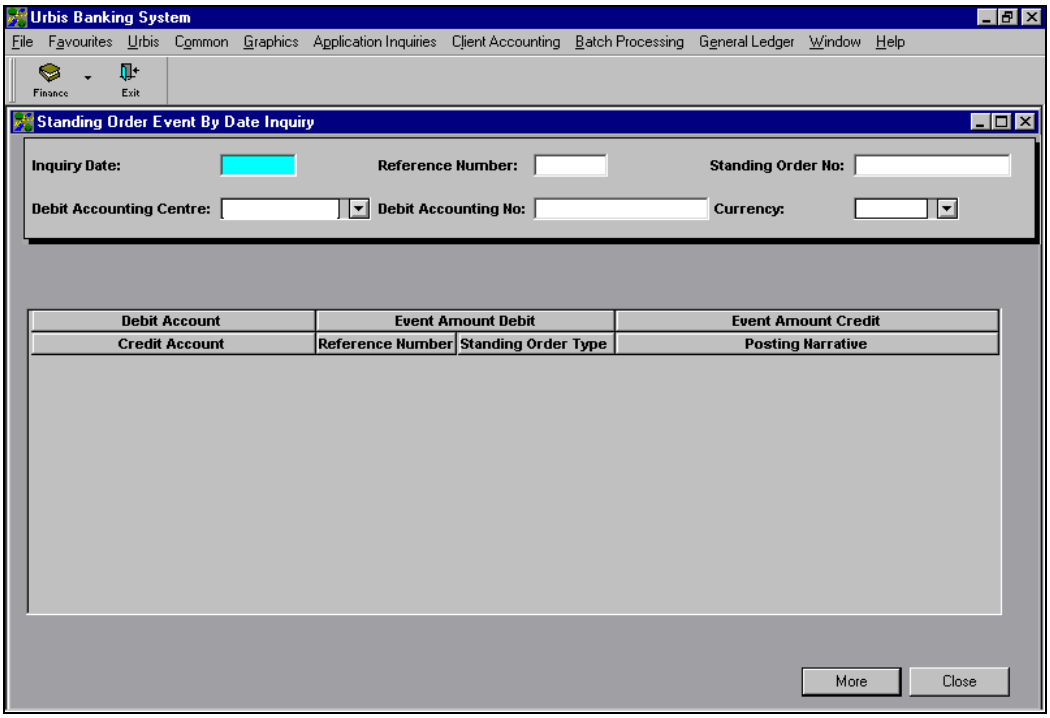

Figure 5–13. Standing Order Event By Date Inquiry screen

Standing Order Reports

The system contains various reports to help in maintaining clients, and inquiring on their details. Below is a report you may find useful for the maintenance of standing orders, you can find out further information in *Core On-Demand Reports Guide*:

- SOSTMLST - Standing Order Details
  This report provides a list of new and existing standing order static details. It also provides details of any external payments.

Section 6
Definition of Field Names

Introduction

This section provides a definition of all the field names on client account data entry screens. The fields are listed alphabetically and details of valid entries are given.

If the field is pre-filled with a value on the screen, or defaults to a value if left blank, these values are also given.

Many of the codes and mnemonics given in this section may be changed when the system is installed at your bank.

Table 6–1. Definition of Field Names

Field	Definition
Account	The number (or letters, or combination of the two) that uniquely identifies an account. It is assigned when an account is opened. On the Cash Wastes (CASHW) screen this identifies an account to which a posting is made. This can be a non-retail banking client account or a general ledger account. See also ‘Account Number’. On the Management Services Immediate Charges (CHRGM) screen, if the immediate charge is to apply to one account only, then enter the account number in here. On the Clean Payment Message Input Screen One – 103 (CP100) and Clean Payments Message Input Screen One – 202 (CP202), this field contains information that can be found on an MT103 and MT202 S.W.I.F.T. message. This field contains details relating to the Account of the person or institution displayed to the left. For an exact definition of this field refer to the S.W.I.F.T. documentation.
Account Analysis Charge	Switch 'On' this field if the charge is to apply to account analysis transactions and activities. See Appendix C, 'Client Account Management Services' for more information.
Account Analysis Group Code	Use this to group together a selection of accounts for Account Analysis. You must only enter a group in this field if the account is defined as using the Account Analysis features. To do this, see the Eligible for Account Analysis field.

Field	Definition
Account at Central Bank	The number of the client's account at the Central Bank. This field is used in S.W.I.F.T. messages if blueprint parameter BP-SWFT-MT202-205 is set to 'Y'.
Account Category	This represents the nature of the account to be created. Only the Banking (WH) option is suitable for a non-retail system.
Account Charges	For client accounts that are to attract charges, this group of fields shows the charge code, charge conditions and payment settlement method that apply.
Account Definition ID	This is the name of a group of accounts with similar characteristics, and is used in the generation of accounts.
Account Hierarchy	Identifies the account as a Grandparent, Parent or Child account for sweep processing. See Maintaining Account Balances in Appendix C of this guide for more information. Grandparent (1) - The primary account in the hierarchy, which can be linked to parent accounts and also to savings and investment accounts. Parent (2) - Secondary accounts in the hierarchy. Each of these is connected to the Grandparent account. Child (3) - Tertiary accounts in the hierarchy. Each of these is connected to a Parent account.
Account Identifier	On the Account Summary by Client - Banking (CAASI) screen, this is a unique identifier for the account. Client account numbers are assigned either automatically by the system when an account is opened or they are assigned by you on the Client Account Type Selection (PTCAT) screen. On the Client Account Management Services Details (CAEXM) screen, this is the type of account for which details are to be added. Account Identifiers are defined on the General Purpose Narratives (GNARR) screen, table type AI.
Account Longname	This is the full name of an account. It is shown on inquiries and printed on statements and reports. The account longname is the title allocated on the Client Account Maintenance (CAHDR) screen.
Account Name	The title of the account as set up on the Client Account Maintenance (CAHDR) screen.
Account Number	The number that uniquely identifies the account. This is an identifier of up to twelve characters that is always assigned by you. On the Account Charges Static Maintenance Details (CACHM) screen, an entry is required.
Account Officer	The account officer responsible for the client. This is the user code of the account officer, set up on the Users (USERS) screen, described in the *Guide to Setting Up*.
Account Opening Date	The date upon which an account is opened. When you are opening a new account, the date defaults to today. The date entered cannot be a future date.

Field	Definition
Account Range Low End/ High End	This is the range of account numbers to be used for account generation. Client accounts are generated in the format CCCCCCC#.NNN where: • CCCCCCC is the client number • # is the checksum (if checksums are used) • NNN is the account number suffix, defined by this field.
Account Status	This shows the status of an account. For non-retail banking accounts, status can be: 0 - Unopened 1 - Active 2 - Inactive 3 - Suspended 4 - Government suspension 5 - Other suspension 6 - Other suspension 7 - Other suspension Codes 5 to 7 can be defined at installation. When recalling a non-retail account on the Client Account Static Details (WACCM) screen, the following code may be displayed: 8 - Closed For an add, the status code defaults to 0 (unopened) if left blank.
Account Title	This is the full name of an account. It is shown on inquiries and printed on statements and reports. The account title is allocated on the Client Account Maintenance (CAHDR) screen.
Account Type	This field indicates the type of account: • Real (R) • Dummy (D) • Group (G).
Account With Bank	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Account/Portfolio Definition ID	The Account Definition ID is defined on the Client Account Definition Maintenance (CAADM) screen. The Client Portfolio is defined on the Portfolio Definition Maintenance (PFDFM) screen. Both are listed in this field on the Client Accounts for Client Type (CAACM) screen.
Account/Portfolio Indicator	On the Client Accounts for Client Type (CAACM) screen, this field indicates whether the definition in the Account/Portfolio Definition ID field is an Account Definition or a Portfolio.

Field	Definition
Accounting Centre	This is the identifier of the Accounting Centre as set up on the Accounting Centres Maintenance (ACNTM) screen. For client account batches, this is the identifier of the accounting centre from which a batch originates. For the batched postings screens for non-retail banking client accounts, the accounting centre is pre-filled with the accounting centre entered on the Batch Header (BHEAD) screen. This represents the identifier of the accounting centre from which a batch originates. For non-retail banking client account charge conditions, the mnemonic of the accounting centre to which the charge conditions apply. This enables you to apply different charge conditions in different accounting centres. On the Account Charges Static Details (CACHM) screen this has one of three purposes: • For ‘General’ charges, all accounts that belong to this accounting centre (in the currency indicated only) use the charge specified • For ‘Specific’ charges, this is the accounting centre to which the account belongs. • For “Fee Type” charges, this is applicable to all client accounts. On the standing order screens this is the identifier of the Accounting Centre or Branch where details of a standing order were input. This may be different from the Debit and Credit Accounting Centres. Accounting Centre consists of a Sector Code, Sub-Sector Code and Profit Centre Code. These codes are held on different General Purpose Narratives (GNARR) table. An accounting centre can represent any level within a financial department, for example, a branch, department, profit centre, or agency. On the Management Services Transactions for Analysis (TRCKM) screen, this is the accounting centre of the charges.
Accounting Centre/DR Account Number/Ccy	For standing orders this is the number of the client account or general ledger account from which transfer payments are made. As part of this identifier, the adjacent "Currency" field indicates the currency to be used by the debit account. You must always enter the Accounting Centre where the Debit Account is held. See 'Debit Accounting Centre'.
Accounts Payable	This is the total amount due to be paid by a company client to its creditors. This field is for documentary purposes only.
Accounts Receivable	This is the value of moneys due to a client from its debtors. This field is for documentary purposes only.

Field	Definition
Accrual Type	For non-retail banking client accounts that have interest conditions, this indicates which accrual type you wish to apply to the account: • Interest is accrued at the end of the **first** online day during end-of-day processing and during every end-of-day until the day you close it; no interest is accrued on the day of closure itself. • Interest is accrued during the first beginning-of-day processing after the account is opened (at the start of the second day) and during every beginning-of-day after that including the **last** day the account is open. Enter either: • First (F) • Last (L) The default accrual type is defined using the blueprint parameter BP-DEF-ACCRUAL-DAY (see the *Guide to Setting Up*).
Action	On the Management Services Transaction Narratives (PNARM) and Management Services Transactions for Analysis (TRCKM) screens, this is the action to be undertaken on the row adjacent to this field. Add (A) - Add the row of data Change (C) - Change information in the row of data Delete (D) - Delete the row of data On the Management Services Queue (BANQI) screen, you can change the way a transaction is to be released from the Pending or Back-valued queue. Normally transactions are released automatically when funds become available. To change the way transactions are released, select one of the following in the Action field adjacent to the transaction you want to change: Rush Release (R) - releases a transaction for posting regardless of available funds. Delete (D) - removes the transaction from the queue and puts it in a batch which is closed Deleted. Ordinary Release (O) - valid for the Back-valued queue only. This moves the transaction to the pending queue for automatic release when funds are available.
Add New Client Details	This enables you to link to the Client Details - New Client (CINEW) screen where you can add a new client. Switch 'On' this field to display the Client Details - New Client (CINEW) screen.

Field	Definition
Address	On the Client Names and Address (NAMDM) screen, this is the postal address associated with the client. At least one line of the address is required. If the client is a Trade Finance client, the address must not exceed 3 lines (including 'Client Name' as the first line), with a maximum of 32 characters per line.
Address Identifier	This field is for use with retail clients only. It is the "Part Address" as entered on the Client Details – General (CIGEN) screen. It is normally the first part of the client's address, i.e. the number of the street at which the client lives but can be any identifier you choose for example the postal code or a password. The method chosen should be decided at installation.
Addresses	This indicates the number of statement copies to be sent to each of the client addresses set up on the Client Names and Addresses (NAMDM) screen. This is a nine digit numeric code. For example: 000200010 Each digit represents the number of copies to be sent to each address. In this example, two copies are to be sent to address four (the fourth digit) and one copy to address eight (the eighth digit). ***Note:*** *An entry of 000000000 indicates that one copy of the statement is to be printed and held at the originating accounting centre.*
Advices Required	Use this field to indicate whether Management Services advices are created when the transaction is posted. To create advices, switch 'On' the "Advices Required" field.
Agency Name	In this field, enter the name of the ratings agency you are entering information for on the Others tab page.
All Contract Types	Use this field to indicate whether or not the default address will be applicable to all contract types. To set the default address for all contract types, switch 'On' the "All Contract Types" field.
Allow Inbound STP	Checking this box will allow the system to process Inbound STP (straight through processing) contracts for this client. The maximum size of contract allowed is governed by the "Maximum Amount" field on the same screen.
Allow Outbound STP	Checking this box will allow the system to process Outbound STP (straight through processing) contracts for this client. The maximum size of contract allowed is governed by the "Maximum Amount" field on the same screen.

Field	Definition
Amount	The value of a charge or posting. For customer transfers entered on the Cash Wastes (CASHW) screen, this is the amount to be debited (which may include charges and commission together with the transfer amount) and the amount to be credited (transfer amount). On the Withholding Tax (CRTXM) screen, this amount indicates the amount greater than the principal of MMDP contract for the contract to generate the withholding tax. On the Management Services Queue (BANQI) screen, this is the amount of the original transaction for the paired transaction.
Amount to Charge	The amount of charges to be posted to an account, if the amount calculated by the system is not to be used.
Authorisation Status	This field is only required if your institution is using the Client Authorisation Queue functionality. When a new client is added to the system, it cannot be used until it has been authorised. See 'Authorisation of New and Changed Client Details' in Section 2 of this guide for more information. • **Authorised** – indicates that the client has already been authorised, and therefore not in the queue. • **Waiting** – indicates that the client is currently awaiting authorisation. This is only possible if the client status is not 'Draft'.
Authorised By	This is the usercode of the User who authorised the updates.
Authorising Officer Authorisation Officer	The initials or security code of the person authorising the hold or stopped cheque, or in the case of account charges, the person reviewing the amount to be charged. These are set up on the Dealers and Officers Table (DEALR).
Automatic Charge	This determines whether charges for the transaction adjacent to this field are to be posted automatically to the account, or are to be handled manually via the Account Analysis Statement. The following options are available when choosing whether to post the charge automatically: • **Do Not Post Charge** – the charge will not be posted automatically. • **Always Post Charge** – the charge will be processed automatically. • **Post if Below Min Balance** – the charge will be posted automatically if the account average balance is below the minimum balance specified on the Account Charges Static Details (CACHM) screen. • **Post if Below Min CR Balance** – the charge will be posted automatically if the account average credit balance is below the minimum balance specified on the Account Charges Static Details (CACHM) screen. See Account Analysis in Appendix C of this guide for more information.

Field	Definition
Backing GL Accounts Credit	The number of the General Ledger backing control account for credit (CR) balances. The account is used to create balancing postings to the General Ledger at end-of-day. The account is also used for calculated interest where the interest condition is tied to a backing account. In addition, the account is used to determine how interest accruals and settlements will be reported in the General Ledger.
Backing GL Accounts Debit	The number of the General Ledger backing control account for debit (DR) balances. The account is used to create balancing postings to the General Ledger at end-of-day. The account is also used for calculated interest where the interest condition is tied to a backing account. In addition, the account is used to determine how interest accruals and settlements will be reported in the General Ledger.
Balance Available	The balance of the client account that can be withdrawn by the client. This is the cleared balance minus any “held funds”.
Balance Book	The total balance posted to an account, including cheques or drafts in clearing and postings that have not yet come to value.
Balance Fluctuation Limit	The amount of daily balance movement allowed on the account.
Balance Minimum/ Maximum	The minimum and maximum balance on the account. If the balance exceeds either of these limits, a warning is produced.
Balance Outstanding	On the Close Client Account (CACLS) screen, the outstanding balance of the account after interest and charges have been taken into account.
Balance Value	The total balance of an account, excluding all postings that have not come to value and cheques or drafts in clearing. The value balance is updated on each value date. Interest is calculated using this balance.
Bank Operation Code	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Bank to Bank Information	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Base Rate Number	The number of a set of base rates. These are set up on the Base Rates (BASE) screen. If a base rate is changed on the Base Rates Maintenance (BASEM) screen, the change is reflected immediately in accounts using interest conditions attached to that rate.

Field	Definition
Basis	This is the method of calculating interest over a year. **360** - 1/360th of the annual interest is charged per elapsed day **365** - 1/365th of the annual interest is charged per elapsed day **366** - For leap years only, 1/366th of the annual interest is charged per elapsed day **12** - Annual interest is divided by 12 and applied on a whole month basis for fixed term deposits and occasionally on monthly interest basis loans. Part months are calculated on an actual/360 basis **30** - 30 day/month (only relevant in a retail system).
Batch End	On the Cash Wastes (CASHW) screen, if you have reached the last line of the screen and wish to complete the batch, switch this field 'On'. Otherwise, it is assumed that you wish to make further entries, on the next screen. If you have not reached the last line, but have completed the batch, you do not need to use the Batch End field.
Batch Number	This number is assigned by the system automatically when opening a new batch and displayed on all subsequent posting or direct debit batch screens. The number is assigned automatically for a group of postings entered via Cash Wastes (CASHW) also.
Batch Status	This is the status of the batch. Different batch statuses may be available on your system depending on whether batch authorisation is being used. It is possible to have one or two levels of authorisation. This is determined by the blueprint parameters BP-ATH-REQ-BATCH and BP-DUAL-ATH. The following is a complete list of possible statuses: • Awaiting Authorisation (A) • Open (O) • Checked (K) • Closed by System (S) • Closed by User (U) • Closed Reconciled (R) In addition, when searching by batch status on the Batch Inquiry (BTCHI) screen, you can search for all statuses by selecting the “All” option from the drop down list on the GUI; or entering a space in the text system.
Batch Type	This shows whether the batch contains postings to client or general ledger accounts.

Field	Definition
Batch Priority	This field enables the user to select a priority value between 1 to 9. If the priority is not entered by the user, the system will assign default value for the corresponding batch type (A) as defined by user on the new default batch priority maintenance static table, BP. ***Note**: The highest priority value is 1 and the least priority value is 9. The default value is 5.*
Beneficiaries	This is a free-format text field for recording the names of beneficiaries.
Beneficiary Bank	This field can be found on an MT202 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Beneficiary Customer	This field can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
BIC Code	Enter the BIC (Bank Identification Code) for the client.
Block	This field is only relevant to a retail client.
Blocking Code	This restricts the posting of entries to the account: • All Postings (B) - Block on all postings • Credits (C) - Block on credits • Debits (D) - Block on debits • Cheques (Q) - Block on cheques • No Blocks (space)
Book Balance	The total balance posted to an account, including cheques in clearing and postings that have not yet come to value.
Book Balance as of	The total balance posted to the account, including cheques in clearing and postings that have not yet come to value. This balance is as of the date shown.
Bought Accounting Centre	The mnemonic of the foreign exchange accounting centre from which you are buying your currency.
Business	The income that a client receives from a business. This field is for documentary purposes only.
Business Group	The business group of the client. This is used to group clients on reports. These are defined on the General Purpose Narratives (GNARR) table, type BG.
C/D	On the Management Services Queue (BANQI) screen, this display field shows whether the original transaction was credit (C) or debit (D)
Calculated Charge	The charge amount for the account as calculated by the system.
Calculated Charge Amount	The charge amount due on an account as calculated by the system.
Card Number	This field is only relevant to users of a retail system.
Cash on Hand	The amount of cash readily available to a client. This field is for documentary purposes only.

Field	Definition
Category	On the Client Accounts Inquiry (CIBAL) screen, this represents the nature of an account created from a product template: • Banking (WH) – non-retail • Demand (DE) - retail only • Savings (SV) - retail only • Fixed Term Deposit (FT)- retail only • Loan (LO) - retail only • Internal (IT) - retail only
Cessation Date	If the company ceases trading, this is the last trading day. The company may still be a client of your institution for a period after this. When the company ceases to be a client, you must also set status to ‘Closed’ and set an ‘End Date’ on the Client Details - Banking (CIWSL) screen.
Charge	On the Cash Wastes (CASHW) screen, the code identifying the charge associated with the posting. The codes are set up on the Charge Codes Maintenance (CACCM) screen. On the Management Services Queue (BANQI) screen, this is the code of the Immediate Charge applied to an associated transaction posting made via the Management Services Transaction Maintenance (CATRM) screen. The Charge Code mnemonics are defined on the General Purpose Narrative (GNARR) type CT and the Charge Codes Maintenance (CACCM) screen.
Charge Amount	On the Charge Codes Maintenance (CACCM) screen this is the amount of the charge to be associated with the specified charge code and charge transaction type.
Charge Amount/Currency	This covers the following charge details: • The amount of the charge associated with the customer transfer • The currency of the charge • The currency of the charge.
Charge Conditions	A code to indicate the set of charge conditions that apply to a specified non-retail banking client account. The charge codes are defined on the General Purpose Narratives (GNARR) table, type CH and the Charge Codes Maintenance (CACCM) screen. On the Management Services Transactions for Analysis (TRCKM) screen, this indicates whether charge conditions, if applicable, are to apply to a general group of accounts or to one specific account or a Fee type account: See the 'Charges' field for more information.
Charge Contra Account	This is the contra account to which the charge posting is made. This account is defined on the Account Charges Static Details (CACHM) screen.

Field	Definition
Charge Date	The date on which the current charges for the account is to be generated. For accounts with automatically processed charges, this is also the date on which they will be posted.
Charge Settlement Method	If the "Charges" field has been used, this field is used to indicate the method by which charges are to be paid: • No charge conditions exist. If this is used do not make an entry in the Charge Conditions field • Settle charges to this client account only • Settle charges to the 'Charges Account' entered on the Client Account Maintenance (CAHDR) screen • Settle charges to the error suspense account. For client accounts this is defined on the System Parameters Table (SPMTR). In this field, enter either: • No Charge or code (0) • Client Account or code (1) • Charge Settlement Account or code (2) • Error Suspense Account or code (3)
Charge Type	The mnemonic of a transaction type that is to attract charges. The transaction type mnemonics are defined on the General Purpose Narrative (GNARR), type CT, and the Charge Codes Maintenance (CACCM) screen. For customer transfers, the charge type is entered for both the debit and credit details. On the Standing Orders Input (SOSTM) screen, this indicates which party is to bear the cost of charges associated with the standing order. • Beneficiary (BEN) • Bank (OUR) On the Management Services Transactions for Analysis (TRCKM) screen, these are the charge conditions that apply to the specified non-retail banking client account.

Field	Definition
Charges	This indicates whether charge conditions, if applicable, are to apply to a general group of accounts or to one specific account: • General (G) • Specific (S) • Fee Type (F) ***Note:*** *On the Account Charges Maintenance (CACHM) and Client Account Definition Maintenance (CAADM) screens, entries of 'General', 'Specific, or ' Fee Type' are permitted.* On the Clean Payment Message Input Screen Three – 103 (CP102), this field contains information that can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation. On the Client Account Generation for Client (CAGCM) screen, a tick in this field shows that you have specified on the Client Account Definition Maintenance (CAADM) screen that charges are to apply to accounts in this group, and that the charges have not been defined. Charges are defined on the Account Charges Static Details (CACHM) screen. Accounts generated using the Client Account Generation for Client (CAGCM) screen remain unopened until the charges have been defined.
Charges Account	If account charges are to be settled to a different account, this is the number of that account. The method of charging is defined by the 'Charge Settlement Method' field on the Client Account Static Details (WACCM) screen.
Charges Date	The date on which the account's charges were generated. For accounts with automatically processed charges, this is also the date on which they were posted.
Charges Frequency	A code indicating the frequency at which charges are to be applied to the account. This code is defined on the General Purpose Narratives Table (table type FR).
Charges Level	This field is relevant to retail accounts only.
Charges Outstanding	The total value of any unpaid charges levied against an account.
Charges Settlement Account	The number of the account to which charges are sent to be settled (if different from the "Client Account Number").
Charges Settlement Frequency	This field is relevant to retail accounts only.
Charges Settlement Method	This field is relevant to retail accounts only.
Charging Method	This field is relevant to retail accounts only.
Charity Number	For clients with the client category of Trust, this is the registered charity number of the trust.

Field	Definition
Cheque Amount	The value of the issued cheque. On the Stopped Cheques (STOPM) screen, the value of the cheque being stopped. If a range of cheques are being stopped, then leave this field blank.
Cheque Number	The number of the cheque. For Hold Funds (HOLDM), it is the number of the cheque for which the funds are being held.
Cheque Presented	This indicates whether or not a cheque has been presented.
Cheque Status	This indicates the status of the cheque being stopped.
Cheque Type	Indicate whether the cheque being issued or paid is a Cashier's or an Official Cheque. • Cashier (C) • Official (O)
City	On the Client Details - Banking (CIWSL) and Client Shortname/City Maintenance (CLSNM) screens this is the mnemonic of a client's city of residence. Together with the 'Client Shortname', this is used to identify uniquely clients associated with non-retail banking facilities. On the Client Details - Employment (CIEMP) screen, this is the mnemonic of the client's employer's city of residence. City mnemonics are set up on the General Purpose Narratives (GNARR) table, type CI.
Clean Payment Status	This allows you to limit the inquiry to clean payments with this status. The clean payment status is also displayed for each clean payment. This can be either: • Incomplete (I) • Unauthorised (U) • Rejected (R) • Deleted (D) • Authorised (A) • Posted (P) • Pending (W)
Client Account Number	The number of the client account. The client account number/currency combination must be unique. The account number is set up on the Client Account Type Selection (PTCAT) screen and the currency is set on the Client Account Maintenance (CAHDR) screen. The Client Account Number may be prefixed by the client number; this is specified at installation. ***Note:*** *Account numbers must not exceed 11 characters for an external Trade Finance client.*

Field	Definition
Client Category	This indicates the category to which a client belongs: • Company Business and non-personal clients • Personal Any private individual who is a client of your institution • Trust A non-personal client constituted as a trust Two other categories, Internal and anonymous, are not relevant in a non-retail system. Within each category, you may define a series of client types using the Client Types Maintenance (CICTM) screen. Client Category is indicated as follows: • Company (CPY) • Personal (PER) • Trust (TRS)
Client City	The mnemonic of a non-retail banking client's city of residence. These mnemonics are set up on the General Purpose Narratives (GNARR) table, type CI.
Client Maiden Name	For married female clients only, this is the surname of the client before she was married. It can be used as means of verifying identification when dealing with the client.
Client Name	This field is for use with retail clients only.
Client Number	This is a unique number used to represent a client. It is assigned by the system automatically when a client is added if BP-GEN-CLIENT-NO is set to 'Y' at installation; it is entered manually by you if set to 'N'. For client inquiries, you do not enter this number as a client must be selected using the "Client and Account Selection" process detailed in the *Starter's Guide*.
Client Portfolio	The Client Portfolio is used to hold a client's positions. This field shows the identifier of the Client Portfolio. The identifier is defined on the Portfolio Definition (PFDFM) screen. On the Client Accounts Inquiry (CIBAL) screen, this field is used to inquire on the client accounts linked to a client portfolio. An account is linked to a portfolio on the Client Account Maintenance (CAHDR) screen.
Client Shortname	This is a short form of a client's name. It is relevant to clients requiring non-retail banking facilities only. When it is used together with the 'City', this provides a unique identifier for a client. 'Client Shortname' and 'City' are defined on the Client Details - Banking (CIWSL) screen.

Field	Definition
Client Status	This indicates the status of a client within the system: • Draft (DRAFT) • Active (ACTIV) • Death Notified (DNOTE) • Death Confirmed (DCONF) • Missing (MISS) • Closed (CLOSE) A client is given a status of 'Draft' when you have completed the Client Details – Banking (CIWSL) screen. This status changes to 'Active' when all the essential client screens have been completed (see Section 2 "Adding Client Details"). Set a status of 'Death Notified' when you are informed of a client's death. This causes any accounts held by the client to be frozen until power of attorney is granted over the client's affairs. This is also true if you set status to 'Missing'. If you set status to 'Death Confirmed', you must also enter an 'End Date' for the client to remove the client from the system. If you set status to 'Closed', you must also enter an 'End Date'.
Client Type	This indicates a type of client, for example private, corporate or member of staff. Client types are set up on the Client Types Maintenance (CICTM) screen and used on the Client Details - Banking (CIWSL) when you define a new client. Each client type belongs to one of the following categories: • Company Business and non-personal clients • Personal Any private individual who is a client of your institution • Trust A non-personal client constituted as a trust The Categories Anonymous and Internal also exist, but are not relevant to users of a non-retail system.
Client's Position	This is a client's job title. It is a free form description.
Closed By	This is the user code of the operator who closed the batch. User codes are set up on the Users Maintenance (USERS) screen, described in the *Guide to Setting Up*.
CMS Indicator Account	This confirms whether the account is a CMS Account or not: • On - CMS Account • Off - Not a CMS Account (default)
CMS Specialist	Associates a CMS Specialist to the account on the Client Account Management Services Details (CAEXM) screen. The specialist entered must be a valid dealer entered on the Dealers and Officers (DEALR) screen (described in the *Core Functions and Inquiries Guide*).

Field	Definition
Comment	This is a documentary field allowing you to record additional information about the agency or counterparty.
Compound Interest Eligible	This field indicates whether the interest on an account is to be calculated using the standard or compound interest methods. See Interest Conditions in Section 3 of this guide for more information. Simple (S) - Simple applies interest to the account once each month. Compound (C) - Compound applies interest to the account on a daily basis.
Confirm Action	This confirms that the reviewed charges information is correct: • On – Confirmed • Off - Not confirmed (default)
Confirm Group Link	This field enables you to link a subordinate client to a parent: T Y Create link N Do not create link See also 'Delete Group Link'.
Confirmation Address	The number of confirmation copies to be sent to each of the client addresses set up on the Client Names and Addresses (NAMDM) screen. This is a nine digit numeric code. For example: 000200010 Each digit represents the number of copies to be sent to each address. In this example, two copies are to be sent to address four (the fourth digit) and one copy to address eight (the eighth digit).
Confirmation Copy Required	This facilitates confirmation copy to be sent to an alternative address. • On – Confirm Copy Required • Off – Confirm Copy Not Required (default) If set to "Yes", the user will be able to specify the media type for the copy.
Connected Client	This field contains information that will be sent to the rFrame interface for inclusion in a statutory report. It is used to define characteristics of an account or accounts. This field can have the values: • Group Member (G) - Group Member in consolidated statutory return (only company clients) • Full Member (S) - Group Member included in consolidated and solo statutory returns (only company clients) • Non Member (Y) - Non Specific Group Member • Blank - Other Customer

Field	Definition
Contingency	The value of contingent liabilities. The field is for documentary purposes only.
Contra Account	This is the account to which the contra posting will be made, and can be either a client or general ledger account. The Posting Type indicates whether this is a debit or credit posting.
Contra Accounting Centre	This is the accounting centre of the account to which the contra posting will be made.
Contra Reversal Reference Number	The reference number of the contra transaction or posting to be reversed with the main transaction being reversed.
Contract Number	A unique reference number that identifies a contract, customer transfer, nostro transfer or nostro transfer reversal. This is automatically allocated when you add a new contract or transfer, but must be entered for all other actions. On the Hold Funds (HOLDM) screen this the number of the contract against which funds are being held. On the Clean Payments from Standing Orders (SOPRQ) screen, this is the contract number of the clean payment.
Contract Type	The type of contract as defined on the General Purpose Narratives (GNARR) table, type CN. For FRA contracts, this field specifies whether the contract is a counterparty or an interdepartmental deal: • FRAC - counterparty deal • FRAI - inter accounting centre deal
Contract Type 1/ 2/ 3	The contract type dropdown list will be populated with general narrative values for all contract types. Define one address applicable to either all contract types OR define up to 3 contract types.
Copy Media	Set the Media type to PAPER or SWIFT, if Confirmation Copy Required is set to "Yes".
Copy Address	If the media type for the copy is specified as SWIFT, a default copy SWIFT address applicable to all contract types can be set up on the same screen i.e. the Client details screen, CIWSL and Copy SWIFT address per contract type can be set up on Client SWIFT Address Maintenance screen, CISWF.
Corporate Actions	On the Client Account Maintenance (CAHDR) and Client Account Definition Maintenance (CAADM) screens, set this asset management field if settlement is to be actioned through corporate actions. (See Corporate Actions in the *Stock Exchange and Securities Management Guide*.)
Corporate Resolution Date	This field shows the date from which a company can start trading, and is used for documentary purposes only.
Corporate Tax Reference	A reference number of up to 15 characters allocated to a company client by the revenue office. This field is for documentary purposes only.

Field	Definition
Cost of Transactions	For the Charge Statement Inquiry (CACSI), the total sum of all transaction costs incurred by the account.
Country	On the Personal Client Details - Employment (CIEMP) screen, this is the mnemonic of the client's employer's country of residence. Country codes are defined on the Countries (CNTRY) screen.
Country of Origin	For a company client this is the country in which the client is registered. For a personal client the mnemonic represents the nationality of the client. Country codes are defined on the Countries (CNTRY) table.
Country of Registration	This is the country where a company client is registered. Country codes are defined on the Countries (CNTRY) table.
Country of Residence	This is the country in which a client is resident. Country codes are defined on the Countries (CNTRY) table.
Country of Risk	This is the country of ultimate risk for a client. Country codes are defined on the Countries (CNTRY) table.
Create Sweep Advice	Use this indicator to specify whether advices should be created when sweep changes are made to the account. To create sweep advices, switch 'On' the Create Sweep Advices field.
Create/Amend MT103	On the Standing Orders Input (SOSTM) screen, this field shows if you want to create or delete an MT103 message for this clean payment. • Yes (Y) - Create/Change MT103 • No (N) - Do not create or change MT103 • Delete (D) - Delete the MT103 When amending a S.W.I.F.T. message, the old message will be deleted by the system, and the basic message derived from the information on the screen will be re-displayed. To inquire on a S.W.I.F.T. message, use the Clean Payments from Standing Orders (SOPRQ) screen, described in the *Settlements Guide*.
Create/Amend MT202	On the Standing Orders Input (SOSTM) screen, this field shows if you want to create or delete an MT202 message for this clean payment. • Yes (Y) - Create/Change MT202 • No (N) - Do not create or change MT202 • Delete (D) - Delete the MT202 When amending a S.W.I.F.T. message, the old message will be deleted by the system, and the basic message derived from the information on the screen will be re-displayed. To inquire on a S.W.I.F.T. message, use the Clean Payments from Standing Orders (SOPRQ) screen, described in the *Settlements Guide*.

Field	Definition
Credit Account	An account for the settlement of credit interest, if this is different from the account that attracts the interest. On the Management Services Queue (BANQI) screen, this is the credit account for the paired transaction.
Credit Account Identifier	The accounting centre mnemonic, client account or general ledger number and currency mnemonic, which together are used to identify the credit account.
Credit Account Number	The number of the client account or general ledger account into which transfer payments are made. As part of this identifier, you must make an entry in the adjacent "Currency" field to indicate the currency to be used by the credit account. This can be different from the currency of the debit account. You must always enter the Accounting Centre where the Credit Account is held. See 'Credit Accounting Centre'. On the Cashier/Official Cheque Issue (CHEQA) screen, when a cashier or official cheque is issued, this is the client or general ledger account into which the funds will be paid. The funds will remain in this account until the cheque is presented for payment.
Credit Accounting Centre	The mnemonic of the accounting centre where the credit account is held.
Credit Advices	If the client's account is credited during a contract, this field indicates whether a S.W.I.F.T. or Paper message or both is sent. Alternatively, leaving this field blank means no message will be sent. • S.W.I.F.T. message (S) • Paper message (P) • Both (B) For the client to receive a message sent via S.W.I.F.T., they must have a valid S.W.I.F.T. address recorded on the Client Details - Banking (CIWSL) screen.
Credit Amount	The amount to be credited as a result of this standing order event.
Credit Backing Account	The number of a general ledger credit backing account. This is set up on the Client Account Static Details (WACCM) screen.
Credit Charge Type	The mnemonic of a credit transaction type that is to attract charges when applied to the screen specified in the "Screen Name" field. The transaction type mnemonics are defined on the General Purpose Narrative (GNARR) table, type CT.
Credit Currency	The currency of the amount to be credited as a result of this standing order event.
Credit Interest Adjustment	The amount by which credit interest outstanding is to be adjusted.

Field	Definition
Credit Interest Conditions	This indicates the type of interest conditions that apply to a non-retail banking account: • Special (S) • General (G) • No Interest (blank) • Netted (N) "Netted" indicates that the interest conditions to be applied are those set up for the Related Grouping Account to which the account you are dealing with is related.
Credit Interest Outstanding	The value of credit interest due to an account that has not been settled prior to account closure.
Credit Settlement Method	The method by which credit interest is to be paid on a non-retail banking account: • No interest conditions exist. If this is used do not make an entry in the Interest Conditions field • Settle interest to this client account only • Settle interest to the interest settlement account entered on the Client Account Static Details (WACCM) screen • Settle interest to the error suspense account. For client accounts this is defined on the System Parameters Table (SPMTR) Enter in this field: • No interest (0) • Client Account (1) • CR Settlement Account (2) • Error Suspense Account (3) To post interest to the settlement account, enter the account number in the ‘CR Account’ field on the Client Account Maintenance (CAHDR) screen.
Credit Type Mandatory	An indicator to specify whether the credit charge transaction type you have set up for the specified screen is to be the only credit charge transaction type for that screen. • On - Credit type mandatory • Off - Credit type not mandatory

Field	Definition
Cross Currency Exchange Rate	This indicates which type of exchange rate is to be used: • Mid market (MID) • Market (MKT) Exchange rates are defined on the Exchange Rates (EXCHM) table. Spot and forward buy and sell rates (counter) are specified on this table together with a market buy and sell rate and a mid-market rate for today and last night.
Currency	The currency. Currencies are defined on the Currencies Table (CCYS). On non-retail account screens this is the currency in which the account is maintained. On the non-retail banking client account posting screens this is the mnemonic of the currency in which a posting is made. For non-retail banking client account charges, the mnemonic of the currency in which an account is to be charged. On the Standing Order Input (SOSTM) screen, this is the currency to be used by the credit or debit accounts. On the Management Services Queue (BANQI) screen, this is the currency of the original transaction for the paired transaction.
Currency Conversion Date	This is the date on which the account was converted from its original currency into euros.
Currency Conversion Indicator	This field controls whether the account is to be converted from its existing currency into euros. This is a Yes/No style question: • On - Account will be converted to euros in the next overnight run. • Off - Account will not be converted to euros in the next overnight run
Currency of Transfer	The mnemonic of the currency in which the transfer is to take place. This is relevant to cross currency standing orders that involve a fixed credit amount only. Currency mnemonics are defined on the Currencies Table (CCYS).
Currency/Instructed Amount	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Current Retention Date	On the Client Account Debit Control (CADCN) screen, this is a read-only field to show the current retention date for reference purposes.
Current Value Balance	On the Client Accounts in Overdraft Inquiry (CAODI) screen, this display field shows the current value balance for the account.
Customer Representative	This associates a Customer Representative to the account. The representative entered must be a valid dealer entered on the Dealers and Officers (DEALR) screen (see the *Core Functions and Inquiries Guide* for details on this screen).

Field	Definition
Date	The value date of the posting.
Date (Opened/Closed)	The date on which the account was opened or closed if applicable.
Date Entered	The date the batch was opened.
Date Expires	For clients with the client category of Trust, this is the date that the trust is due to end.
Date Formed	For clients with the client category of Trust, this is the date that the trust was formed.
Date Last Changed	The date on which the general ledger backing account is to change. This date is supplied by the system and is normally today.
Date of Birth	This is the client's date of birth. It is the form DDMMYYYY, for example 31051967. This can be used as an aid to identifying a client. On the Client Details – Trust (CITRS) screen, there are also date of birth fields for life tenants and beneficiaries. The day/month/year order can be altered by changing the blueprint parameter BP-DATE-FORMAT to: • UK - for DDMMYY and DDMMYYYY • IT - for YYMMDD and YYYYMMDD • US - for MMDDYY and MMDDYYYY
Date of Death	If a client dies, this field records the date of death. This field is relevant only if the 'Client Status' is set to 'deceased' on the Client Details - Personal (CIPER) screen.
Date Stop Applied	The date on which a stop was placed on the cheque using the Stopped Cheques (STOPM) screen.
Days Clearing Days For Clearing	The number of days for a cheque or any item in clearing to be cleared.
Debit Account	An account for the settlement of debit interest, if this is different from the account that attracts the interest. On the Management Services Queue (BANQI) screen, this is the debit account for the paired transaction.
Debit Account Number	For standing orders this is the number of the account from which transfer payments are made. As part of this identifier, the adjacent "Currency" field indicates the currency to be used by the debit account. You must always enter the Accounting Centre where the Debit Account is held. See 'Debit Accounting Centre'.
Debit Accounting Centre	The mnemonic of the accounting centre where the debit account is held.

Field	Definition
Debit Advices	If the client's account is debited during a contract, this field indicates whether a S.W.I.F.T. or Paper message, or both is sent. Alternatively, leaving this field blank means no message will be sent. • S.W.I.F.T. message (S) • Paper message (P) • Both (B) For the client to receive a message sent via S.W.I.F.T., they must have a valid S.W.I.F.T. address recorded on the Client Details - Banking (CIWSL) screen.
Debit Amount	The amount to be debited as a result of this standing order event.
Debit Backing Account	The number of a general ledger debit backing account. This is set up on the Client Account Static Details (WACCM) screen.
Debit Charge Type	The mnemonic of a debit transaction type that is to attract a charge when applied to the screen specified in the "Screen Name" field. The transaction type mnemonics are defined on the General Purpose Narrative (GNARR) table, type CT.
Debit Currency	The currency of the amount to be debited as a result of this standing order event.
Debit Interest Adjustment	The amount by which debit interest outstanding is to be adjusted.
Debit Interest Conditions	This indicates the type of interest conditions that apply to a non-retail banking account: • Special (S) • General (G) • No Interest (blank) • Netted (N) "Netted" indicates that the interest conditions to be applied are those set up for the Related Grouping Account to which the account you are dealing with is related.
Debit Interest Outstanding	The value of debit interest that has not been settled prior to account closure.
Debit Interest Settlement Account	The number of the account to which debit interest is posted.
Debit or Credit	This indicates whether the transaction is a debit or a credit. • Debit (D) • Credit (C)

Field	Definition
Debit Settlement Method	The method by which debit interest is to be paid on a non-retail banking account: • No interest conditions exist. If this is used do not make an entry in the Interest Conditions field • Settle interest to this client account only • Settle interest to the interest settlement account entered on the Client Account Static Details (WACCM) screen • Settle interest to the error suspense account. For client accounts this is defined on the System Parameters Table (SPMTR). In this field, enter either: • No interest (0) • Client Account (1) • DR Settlement Account (2) • Error Suspense Account (3) To post interest to the settlement account, enter the account number in the 'DR Account' field on the Client Account Maintenance (CAHDR) screen.
Debit Type Mandatory	This indicator specifies whether the debit charge transaction type you have set up for the specified screen is to be the only debit charge transaction type for that screen. • On - Debit type mandatory • Off - Debit type not mandatory
Debit/Credit Details	The Account Number, Amount, and Currency of the contract from the debit and credit sides.
Default Address	The default SWIFT address is displayed for the client as defined on Client Details - Banking (CIWSL).
Default Analysis Details	This allows the defaulting of existing General Charge Condition details when linking to the Management Services Transaction Tracking (TRCKM) screen when creating a Specific Charge Condition. Switch 'On' this field to default existing general charge conditions.
Default Copy Address	The default copy SWIFT address is displayed for the client as defined on Client Details - Banking (CIWSL). "Paper" indicates that the Copy Confirmation Media is set to Paper.
Delete	On the Batch Inquiry (BTCHI) screen, this indicator will display if the batch has been deleted.

Field	Definition
Delete Group Link	This field enables you to remove a link between a subordinate client and a parent: T Y Delete link N Do not delete link
Depreciation	This is value of depreciation of assets over the current financial year. This field is for documentary purposes only.
Description	This field contains a brief description of the client type.
Destination	The S.W.I.F.T. address to which the message will be sent. The address must be either 8 or 11 characters in length. The first six characters must be alphabetic. This represents the destination indicated on a S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Details of Payment	This field can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Details of Trustees	This is a free-format text field for recording the details of trustees.
Development Bank Type	If the client is a development bank, select the appropriate type from the drop down list. This information is sent to the rFrame interface for inclusion in statutory reports. The types are set up on the General Purpose Narrative (GNARR) table DV.
Dividends	This is the total value of dividends that a client is due to pay during the current financial year. On the Client Account Maintenance (CAHDR) and Client Account Definition Maintenance (CAADM) screens, set this asset management field if settlement is to be actioned using dividends.
Dormant Text	Associates text to a specific account on the Client Account Management Services Details (CAEXM) screen. This field is for documentary purposes only.
Dormant Text Date	This is the date on which the Dormant Text was entered onto this screen, and it is entered manually by the user. The Dormant Text field is for documentary purposes only.
Driver's Licence Number	This is number of the driving licence held by the client, where relevant. This field is for documentary purposes only.
Due	A narrative indicating whether the account is: • TO - A due to account • FROM - A due from account

Field	Definition
Due To/From	This indicates whether an amount is a due **To** an account or due **From** an account. This field is used for nostro accounts. • To – due to • From – due from For Client Account Static Details (WACCM) this field is pre-filled with **To**.
Education Code	This is a one character code that represents the type of education a client is receiving. If a client is not a student this field should be set to 'Not Applicable'. Education codes are: • None (N) • Primary (P) • Secondary (S) • Tertiary (T) • Trade Qualification (R) This field is for documentary purposes only.
Effective Date	On the Interest Conditions (INTSM) screens, this is the date from which interest conditions may apply. For non-retail banking client account charges, this is the date on which the charge code becomes effective. For Held Funds this is the date from which the funds will be held. The date from which the rate which applies to withholding tax becomes effective. On the Management Services Transaction Details (TRDTM) screen, this is the date from which the Transaction Identifier is effective.
Eligible for Account Analysis	This field displays if the account analysis functionality has been activated for the selected account. This is taken from the 'Account Analysis Charge' field on the Account Charges Static Details (CACHM) screen. • On - Account Analysis is active • Off - Account Analysis is inactive
Eligible for Sweeps	This field activates the sweeps functionality in the system for the selected account. • On - Sweep Processing is active • Off - Sweep Processing is inactive
Employer Client Number	If a client's employer is also a client of your institution, this field shows their Client Number as assigned by the system. If you do not know this number, use the Client and Account Selection process to identify the client and display their details on the Client Details - Banking (CIWSL) screen. This screen includes the client number.

Field	Definition
Employer Shortname	The shortname of a client's employer, if the employer is a client of your institution.
Employer's Line of Business	This is two character code representing the line of business of a client's employer. Line of business codes are defined on the General Purpose Narratives (GNARR) table, type LB.
Employment Address	This is the address of a client's employer. Up to three lines can be used.
Employment End Date	When a client no longer holds the employment described by the current employment record, this shows the date that employment terminated.
Employment Sequence	You can store up to nine employment records for a single client. This indicates which client record you are dealing with at present.
Employment Start Date	This is the date that a client started the job described by the current employment record. The employment record is valid from this date.
Employment Status	A client's employment status is represented by one of the following values: • Employed (E) • Unemployed (U) • Self employed (S) • Home maker (H) • Retired (R) • Student (O) This field is for documentary purposes only.
End Cheque Number	The number of the final cheque in the range of cheques to be stopped. If you are only stopping one cheque, this field can be left blank.
End Date	The date upon which your relationship with a client ceases.
Entry Complete	When you have finished entering the standing order details, you must confirm that it is complete. To do this, switch "On" this field and click **OK**. Only if this field is checked and based on the blueprint parameter set up, the status from Incomplete to Waiting / Authorised can be changed.
Equity Capital	The value of shareholder's capital. This field is for documentary purposes only.
Euro Confirmations	Checking this field will ensure that any confirmation printed out by the system will have the balance in Euros as well as the original currency. This is only relevant to currencies that are joining the single european currency (the euro).
Event Amount Credit	The amount to be credited as a result of this standing order event.

Field	Definition
Event Amount Debit	The amount to be debited as a result of this standing order event.
Event Date	On the Standing Order Event Inquiry (SOHOI) this is the date on which a standing order event takes place.
Exchange Control Code	The mnemonic of the exchange control area, used for documentary purposes only. The mnemonics are defined on the General Purpose Narratives (GNARR) table, type EC.
Exchange Rate	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Exchange Rate Group	The Exchange rate group used by the Accounting Centre. This is set up on the General Purpose Narratives (GNARR) table, type EX. On the Exchange Rates (EXCHM) screen, this is the mnemonic of the exchange rate group to which the rates belong.
Expiry Date	On the Hold Funds (HOLDM) screen, this is the date on which a hold expires. The hold will be released during overnight processing at the close of business on that date.
Expiry/Review Date	The date of the next expiry or review date.
Expiry/Review Days	The number of days from the account opening date to the next review date.
Extended Narrative	The first line of narrative, if extended narratives are used, will have to be entered on actual batch/clean payment/standing order screen. Link is available from these screens to a extended narrative screen, where the extended narrative are maintained (added/changed/deleted/inquired). The first line of the Narrative is displayed but will be non-modifiable via this screen. The five extra lines of narrative will be referred to as ‘Extended Narrative’. Unless the system level blueprint parameter (BP-EXTD-NARR) is set to ‘YES’, the extended narrative will be prohibited and the user will only be allowed to use single line narrative. If extended narratives are used, the posting narrative field will allow the user to enter a maximum of 34 characters (or 26 characters when the last 8 characters of the narrative are reserved for the batch number). ***Note:*** *The extended narratives will be allowed only if narrative (and not narrative code) is selected on add/change screens. The extended narrative is not applicable to client SWIFT statements.*

Field	Definition
External Database Indicator	Indicates whether the client is an external client whose details are also held on an external database, currently Trade Finance System. • Dealing System (S) • Trade Finance (T) • Both (B) ***Note:*** *If you are amending this field to be "Trade Finance", error messages will be displayed if you need to change the client address (on the Client Names and Address (NAMDM) screen) to ensure that it meets the format requirements of the external database.*
Fax Number	The fax contact number for the client.
Fiduciary Loan Withholding Tax	If this field is set, withholding tax is suppressed for the client's fiduciary deposits.
Files	On the System Monitor GUI screen, this shows the number of files processed by the interface.
Final Event Date	The date on which the final event (standing order) is to take place. If no date is set, the literal 'TBA' is displayed. This stands for 'To Be Advised'.
Financial Institution Type	If the client is a financial institution then you can use this field to store what type of financial institution they are.
Financial Year End	This is the date upon which the company's current financial year ends.
First Payment Date	The date on which the first standing order payment is to made.
Forename	If the client is a personal client, these are their forenames.
Formation Date	This is the date on which the company was formed. This may be different from the date it was registered. ***Note:*** *'Formation Date' cannot be earlier than 01011857. If the company formed earlier than this, you are advised to enter 01011857 and maintain a manual record of the actual date.*
Frequency	The code indicating the frequency at which charges are to be made to the account. The code is defined on the General Purpose Narratives Table (table type FR).
Full Name	See "Longname"
Funding Account	This determines whether an account is a funding account or not. A funding account is for internal use with the cost of funds functionality. • On - Account is a funding account • Off - Account is not a funding account See Cost of Funds in section 3 of this guide for a description of this functionality.

Field	Definition
Funding Base Rate Number	The number of a set of base rates. These are set up on the Base Rates (BASE) screen. This is used for the internal process of cost of funds. The account it is applied to must have been designated as a funding account using the Funding Account field on the Client Account Static Details (WACCM) screen. See Cost of Funds in section 3 of this guide for a description of this functionality.
Funding Margin	This is an extra margin applied to the base rate, and is used when calculating the cost of funds on a Funding Account. This margin is applied to the base rate defined by the Funding Base Rate Number. See Cost of Funds in section 3 of this guide for a description of this functionality.
GL Backing Account	The General Ledger Backing Account used by the overdrawn client accounts being inquired on.
GL Contra Account Number	The number of the General Ledger contra account for a posting. The “GL contra account” is defaulted on all subsequent posting screens in the batch; it can be amended as required but it cannot be left blank. Balancing postings are automatically made to the contra account therefore the total credit and debit posting amounts do not have to balance. If the “GL contra account” is not entered the total credit and debit amounts must balance.
Group Account for Sweeps	Identifies the next account up in the hierarchy for sweep processing. If the account is a child account, you must enter a relevant parent account. If the account is a parent account, you must enter the relevant grandparent account.
Group Account Number for Interest Netting	The number of the account that is used to settle net interest for a group of related accounts. This account must be a group account that has no entry in the ‘Group Account Number for Interest Netting’ field (for more information on how to set up netting; see “Interest Netting to a Group Account” in Section 3).
Group Hierarchy Level	This is not entered. It is a code indicating the level of a client within a group. 1 - Primary group leader 2 - Secondary group leader 3 - Group member
Group Leader City	If the client is a member of a group, the mnemonic of the city of residence of the group leader immediately above the client.
Group Leader Shortname	If the client is a member of a group, the shortname of the group leader immediately above the client.
Guarantee Code	This field contains information that will be sent to the rFrame interface for inclusion in a statutory report. It is used to define characteristics of an account or accounts. Enter a valid Guarantee code for the client on the Client Details - – Banking (CIWSL) screen, if the client is used as a guarantor. Guarantee Codes are set up on the GNARR Table type AU.
Hold Amount	The amount of funds to be held on an account.

Field	Definition
Hold Number	The reference number of a hold as defined on the Held Funds (HOLDM) screen. Entry of this number on the Client Account Debit (CADR) screen enables you to release the held funds.
Holiday Method	This comprises two fields. The first identifies the method that the system uses to determine the settlement event date, if the system generated event date falls on a holiday in the countries indicated by the value in the second field. The first field indicates one of the following: **Following (F)** The system settles the amount on the next available day. **Modified (M)** The system settles the amount on the next available day. If this falls in the following month, the system will search for the first available day prior to the end of the month. **Previous (P)** The system settles the amount on the first available previous day. **None (N)** The system will settle on the event day, even if it is a holiday. The second field contains a value defined on the Country Check Codes table (CNCHK) representing the currencies to be checked for holidays for each contract event.
Holiday Override	This comprises two fields. The first indicates whether an event on the contract can occur on a holiday: • On - Yes, events can occur on holidays • Off - No, events can not occur on holidays The second field contains a value defined on the Country Check Codes table (CNCHK) representing the currencies to be checked for holidays for each contract event.
Housing Association	Check this field if the client company is a housing association.
Immediate Charge Amount	This is the amount of the Immediate Charge that will be posted when the transaction entered on the Management Services Transaction Maintenance (CATRM) screen is posted. This amount is defined on the Management Services Immediate Charge (CHRGM) screen and is displayed on the Management Services Transaction Maintenance (CATRM) screen when defaults are displayed.
Immediate Charge	The code of the Immediate Charge that will be applied to an associated transaction posting made via the Management Services Transaction Maintenance (CATRM) screen. The Charge Code mnemonics are defined on the General Purpose Narrative (GNARR) type CT and the Charge Codes Maintenance (CACCM) screen.

Field	Definition
Immediate Charge Code	The code of the Immediate Charge that will be applied to an associated transaction posting made via the Management Services Transaction Maintenance (CATRM) screen. The Charge Code mnemonics are defined on the General Purpose Narrative (GNARR) type CT and the Charge Codes Maintenance (CACCM) screen.
Immediate Charge Contra Account	This is the GL Account to which the contra posting of the immediate charge amount will be made for this Immediate Charge. This account may be defined on the Management Services Immediate Charge (CHRGM) screen or will default to the account specified on the System Parameters (SPMTR) screen (described in the *Guide to Setting Up*).
Include in rFrame	Select this field to include any deals from this account in the rFrame statutory reporting. • On - Include deals • Provision – Include deals in provision • Off - Do not include deals
Income Level	This is a value from 1 to 5 representing the level of income for a client. These are defined on the General Purpose Narratives (GNARR) table, type IL.
Industrial Classification	A five-digit alpha-numeric code used to identify the industry associated with the client. These are defined on the General Purpose Narratives (GNARR) table type ID.
Input Date	For the Postings Inquiry by Account (POSTI), Postings Inquiry by Number (POSTN) and the Statement Inquiry by Date (STMTD) screens this is the date upon which the posting was entered. On the Journal Value By Value Date (JRNLI) screen, this field will only be entered with a value if the value is different from the value date (for example in the case of back-dated transactions).
Inquiry Date	The date for which events are to be displayed.
Inquiry Reference	This field is for documentary purposes only. Anything entered in this field will be displayed on the Management Services Transaction Narratives (PNARM) field.
Institutional Code	This is the default code that will be applied to all clients of this client type. It is used to describe the business sector or institution the client belongs to.
Institutional Sector	This is a reference code describing what type of business sector or institution the client belongs to.
Instruction Code	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Insurance	This is the total value of any insurance payments to be made by a client in a year. This field is for documentary purposes only.

Field	Definition
Interest Accrued	This shows the interest accrued on the account at the “Value Date” input.
Interest Basis	This is the method of calculating interest over a year.
Interest Calculation Basis	**360** - 1/360th of the annual interest is charged per elapsed day
	365 - 1/365th of the annual interest is charged per elapsed day
	366 - For leap years only, 1/366th of the annual interest is charged per elapsed day
	12 - Annual interest is divided by 12 and applied on a whole month basis for fixed term deposits and occasionally on monthly interest basis loans. Part months are calculated on an actual/360 basis.
	30 - 30 day/month (only relevant in a retail system).
Interest Conditions	A narrative showing the type of interest conditions that apply to the account. These are set up on the Interest Conditions (INTSM) screen. If no specific interest conditions have been defined for an account, the literal ‘NO INTEREST’ is displayed.
	On the Client Account Generation for Client (CAGCM) screen, a tick in this field shows that you have specified on the Client Account Definition Maintenance (CAADM) screen that interest conditions are to apply to accounts in this group, and that the interest conditions have not been defined. Interest conditions are defined on the Interest Conditions (INTSM) screen. Accounts generated using the Client Account Generation for Client (CAGCM) screen remain unopened until the interest conditions have been defined.
Interest CR Settlement Frequency	This is the frequency at which credit interest is settled for an account. Credit interest can be settled to a different account if one is specified in the ‘CR Account’ field.
	Frequency codes are defined on the General Purpose Narratives (GNARR) table, type FR.
Interest DR Settlement Frequency	This is the frequency at which debit interest is settled for an account. Debit interest can be settled to a different account if one is specified in the ‘DR Account’ field.
	Frequency codes are defined on the General Purpose Narratives (GNARR) table, type FR.
Interest Level 1 – 4	The balance of the account up to which the associated interest rate applies. See ‘Interest Rate 1 – 5’. If the balance is above level 4, Interest Rate 5 is applied.
Interest Outstanding – Credit	The amount of credit interest accrued since the previous settlement.
Interest Outstanding - Debit	The amount of debit interest accrued since the previous settlement.
Interest Rate 1	The first interest rate that applies to the account.

Field	Definition
Interest Rate 1 – 5	The interest rate that applies to the corresponding interest level. Interest Rate 1 applies to amounts below level 1, Interest Rate 2 applies to amounts between level 1 and 2 and so on. Interest Rate 5 is used for amounts above level 4.
Interest Settlement - Frequency CR - Frequency DR	How often credit interest (CR) and debit interest (DR) is settled on the account. This is set up on the General Purpose Narratives (GNARR) table, type FR.
Interest Settlement Account - Credit	The number of the account to which credit interest is posted.
Interest Settlement Account - Debit	The number of the account to which debit interest is posted.
Interest Spread	This field determines whether the add on rate defined in the Investment Rate field is added to or subtracted from the base rate defined in the Base Rate Number field.
Interest Statement Required	This indicates whether a separate statement is required showing interest paid or received against an account. • On – Yes • Off – No If an interest statement is to be sent, it is always printed when the CASTMTS – Client Account Statements report is run for non-retail banking.
Interest Suppression	This indicates whether or not interest rate changes are to be suppressed on the statements for that client: • On - Suppress interest rate changes (default) • Off - Do not suppress interest rate changes
Interest Type	On the Interest Conditions (INTSM) screen, this indicates whether the interest rate variations are added to or subtracted from the base rate: • Added (+) • Subtracted (-)
Interest Usage	On the Interest Conditions (INTSM) screen, this indicates whether the interest condition is for debit interest or credit interest. For the Interest Conditions Inquiry (INTSI), this indicates the type of account interest conditions for inquiry: • Debit (D) • Credit (C)
Interface Type	On the System Monitor GUI screen, this list the Cash Management Services Interfaces with files inbound into the system, and the number of files rejected and processed. See the *Guide to Interfaces with External Systems*.

Field	Definition
Interim Statement	Indicates whether or not a statement is generated between scheduled statement dates: • On - Interim statement • Off - Not an interim statement
Intermediary	On the Authorise Release of Event Messages (SETTA) screen, this field displays the name of the intermediary via which the agent is contacted. Intermediaries are set up on the Agent Details Maintenance (AGNTM) and Agent Settlement Defaults (AGDFM) screens. On the Clean Payment Message Input Screen Two – 103 (CP101) screen, this field can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Intermediary Bank	This field can be found on an MT202 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Internal Client Type	A code identifying a type of client. This is used by the Default General Ledger Masters (GLDFM) screen as part of the key that identifies a default general ledger master for a contract. An entry in this field is relevant to non-retail banking clients only. The Default General Ledger Masters (GLDFM) screen is described in the *General Ledger Administration Guide*. Internal client types are defined on the General Purpose Narratives (GNARR) table, type IC.
Investment	In the ‘Income’ section of the Company Client Financial Information (CIFIC) screen, this is the total value of income generated in a year by any investments held by a client. This field is for documentary purposes only.
Investment Indicator	This indicates whether excess funds can be swept into an investment account. If funds can be swept into an investment account, then the amount must be greater than that defined in the Minimum Sweep Amount field.
Investment Rate	This is the percentage change to the standard base rate applied to an investment account. The Interest Spread field indicates whether this rate change is added to or subtracted from the base rate.
Investments	In the ‘Assets’ section of the Company Client Financial Information (CIFIC) screen this is the value of investments made by a client. This field is for documentary purposes only.
Is Ordering Party a Bank?	For a standing order, this field should be set to “on” if the party placing the standing order is a bank.
Issue Date	The date that the stopped cheque was issued.
Items	On the System Monitor GUI screen, this shows the number of items that have been processed by the interface.
Language	The language of correspondence for the client. Currently, this can only be English (E).

Field	Definition
Last Change Date	This is the date when the rating for this counterparty was last altered by this agency.
Last Charge Details: Calculated Amount	The calculated charge amount for the account when last charged.
Last Charge Details: Date	The date of the last charge on the account.
Last Charge Details: Posted Amount	The charge amount posted to the account when it was last charged.
Last Event Amount Credit	The amount credited to the Credit Account by the last event.
Last Event Amount Debit	The amount debited from the Debit Account by the last event.
Last Event Date	The date on which the last event took place.
Last Financial Activity	On the Client Account Management Services Details (CAEXM) screen, enter the date of the last financial activity to be displayed.
Last Payment Date	This field is only applicable to retail accounts.
Last Posting Input Date	The last date on which a posting was made for this account.
Last Statement Date	This is the date upon which the last statement was produced for a client.
Last Update By	On the Standing Orders Input (SOSTM) screen, this shows the usercode of the user who last updated the record.
Last Updated	On the Standing Orders Input (SOSTM) screen, this shows the date that the record was last updated.
Legal Status Code	This field is for storing information on the number of holders and the access each holder has. It is set up on General Purpose Narrative (GNARR) table type LC.

Field	Definition
Level Usage	The way in which interest can be charged or paid on an account is controlled by the entry you make in this field. The interest rate can be based on its balance. Up to four interest levels can be defined for this purpose. Each level has a maximum amount up to which an interest rate or rate variation is applied. Interest levels can be applied in two ways: • On an All-Up basis, the interest rate for the level in which the balance falls is applied to the whole balance • On a Slice basis, the interest rate for each level is applied to the part of the balance that falls in that level A Flat rate of interest can also be applied. If you are calculating interest using the ''Compound'' method, then interest levels are not applicable, and a flat rate must be applied. Each interest bearing account can have a minimum and maximum interest rate associated with it. If the interest rate on an account falls below the minimum, the minimum rate is used. If it exceeds the maximum, the maximum rate is used. • All-Up (A) • Slice (S) • Flat (F) The interest level is set for an account product and cannot be changed for a specific account.
Life Tenant	On the Client Details – Trust (CITRS) screen, this is a documentary field used to list the names and dates of birth of life tenants, who derive some (usually limited) benefit from the trust during their own lifetimes.
Line of Business	This is two character code representing the company client's line of business. It is sent to the rFrame interface for statutory reporting purposes. Line of business codes are defined on the General Purpose Narratives (GNARR) table, type LB.
Loan Indicator	This field indicates whether a loan can be raised to get an account back up to its target balance.
Loan Interest	This is the value of any interest due on loans held by a client during the current financial year. This field is for documentary purposes only.
Loan Payments	This is the total value of any loan payments to be made by a client in a year. This field is for documentary purposes only.
Loans	This is the outstanding balance of any loans held by a client. This field is for documentary purposes only.
Local Bank Flag	This field should be checked if the client is a local bank.
Long Loans	The value of long term loans taken by a client. This field is for documentary purposes only.

Field	Definition
Longname	For clients belonging to the company category, this is name of the company. For clients belonging to personal and internal categories this is the last name, or surname, of the client. For clients belonging to the anonymous category, this field is not relevant. Clients are associated with a client category through the 'Client Type' they are given on the Client Details–- New Client (CINEW) screen. Client types are set up on the Client Types Maintenance (CICTM). For an account this is the title as set up on the Client Account Maintenance (CAHDR) screen.
Mandatory	Indicates if a narrative is mandatory for this prompt and transaction type, when a transaction is entered on the Management Services Transaction entry screen.
Marital Status	A client's marital status is represented by one of the following: • Single (S) • Married (M) • Divorced (D) • Widowed (W) • De Facto (F) • Separated (P) This field is for documentary purposes only.
Marketing	This is the amount a client plans to spend on marketing during the current financial year.
Material	This is the total material cost that a client is due to pay during the current financial year.
Maximum Amount	The maximum amount allowed for inbound and outbound STP settlements.
Maximum Balance	On the Client Account Static Details (WACCM) screen, this is the maximum balance allowed on the account in question. If this limit is exceeded, the variation is reported on the CAJOURNAL–- Client Account Postings Journal report.
Maximum Length of Text	This field shows the maximum length of text allowed in the narrative prompt.
Maximum	This is the maximum text length allowed for the prompt.
Maximum Rate	The maximum rate of interest that can be charged on the account.
Minimum Balance	On the Client Account Static Details (WACCM) screen, this is the minimum balance allowed on the account. If the balance falls below this value, warnings are printed by the CAJOURNAL–- Client Account Postings Journal report. On the Account Charges Static Details (CACHM) screen this is the minimum balance to be maintained to avoid charges.

Field	Definition
Minimum Charge Amount	The minimum amount that is to be charged to a particular account or set of accounts within an accounting centre.
Minimum Interest Charge Calculation	A code to indicate the minimum charge calculation. The system defaults to Charge Code (as well as defaulting the Guaranteed Amount to zero): 0. Charge or pay the minimum interest guaranteed (entered under ''Guaranteed Amount'') or the system calculated interest amount, whichever is the greater 1. Charge or pay the minimum interest guaranteed (entered under ''Guaranteed Amount'') irrespective of the system calculated interest amount 2. No charge or payment is made if the system calculated interest amount is less than the minimum ''Guaranteed Amount''. In such cases, for both debit and credit interest, the amount unpaid or charged will remain as an accrual against the client account until the preset minimum is reached, at which time the charge or payment is effected.
Minimum Interest Guaranteed Amount	This can be entered on the Interest Conditions (INTSM) screen. For credit interest it will be the minimum interest payable to the client. For debit interest it will be the maximum interest chargeable to the client.
Minimum Rate	The minimum rate of interest that can be charged on the account.
Minimum Sweep Amount	For an account that is to have excess funds swept into an investment account, the sweep amount must be greater than the minimum amount defined in this field.
Mother's Maiden Name	This is the surname of the client's mother before she was married. It can be used as a means of verifying identification when dealing with the client.
MT103 Exists	On the Standing Orders Input (SOSTM) screen, this indicator is set if an MT103 message for this clean payment exists.
MT202 Exists	On the Standing Orders Input (SOSTM) screen, this indicator is set if an MT202 message for this clean payment exists.
Name and Address Number	The record number of the address. Up to 9 addresses can be entered for each client.
Narrative	A narrative to be printed on a hold, stop, statement or the advices for a transaction. If you enter a Narrative you cannot enter a Narrative Code.
Narrative Code	A narrative to be printed on a hold, stop, statement or the advices for a transaction. If you enter a Narrative Code you cannot enter a Narrative. These codes are set up on the General Purpose Narratives (GNARR), type ST. On the Standing Orders Input (SOSTM) screen, enter "PLT" to define a standing order as being part of year-end profit and loss transfer. This standing order will not be included in a run of the INCOMESTMT - Income Statement report.

Field	Definition
Narrative Prompt	This field specifies the description that is displayed for this prompt and this transaction type when a transaction is entered on Management Services screens.
Narrative/Payee	A free format narrative field that can be used to indicate the party to whom the cheque is made out. If you make an entry in this field you cannot enter a Narrative Code.
National Identity / Passport Number	This can be either the national identity number or the passport number held by a client. This number should be unique and can be used as a key identifier for the client.
Nationality	This is a mnemonic representing the country of a client's nationality. Country codes are defined on the Countries (CNTRY) table.
NBC Accounts Only	Display only those overdrawn accounts marked for Negative Balance Checking.
NBC Total	On the System Monitor GUI screen, this shows the number of accounts marked as requiring a Negative Balance Check that are in overdraft. The number of accounts in overdraft is displayed for each accounting centre. Negative Balance Checking is part of the Client Account Management Services functionality described in Appendix C of this guide.
Negative Balance Checking (NBC) Type–- Day	This indicates whether the account is eligible for Negative Balance Checking (NBC) for transactions posted during the day. Debits made to accounts with this indicator set will be placed on the Pending Queue. See Negative Balance Checking in Appendix C of this guide for more information on this feature. Yes (Y)–- Allow NBC for this account. No (N)–- Disable NBC for this account Override (O)–- NBC is allowed for this account, but can be overridden by the user.
Negative Balance Checking (NBC) Type–- EOD	This indicates whether the account is eligible for Negative Balance Checking during pre End of Day processing. See Negative Balance Checking in Appendix C of this guide for more information on this feature. Yes (Y)–- Allow NBC for this account. No (N)–- Disable NBC for this account Override (O)–- NBC is allowed for this account, but can be overridden by the user.
Net Settlement Indicator	This indicates whether or not debit and credit interest will be netted for settlement. If interest settlement is to be netted, debit and credit settlement frequencies must be the same (these are set on the Client Account Maintenance (CAHDR) screen). • On – Netted • Off - Not netted

Field	Definition
New Charging Method	This field indicates whether there has been a change in the 'Charging Method' since the last charge settlement.
Next Event Date	The date on which the next event is to take place.
Nostro Name	The name of the pay nostro for the standing order.
Notification Address	The client address number to be used for notifications.
Number	On the System Monitor GUI screen, this is the batch number.
Number of Days Back	The number of previous days that are to be checked to determine whether a stopped cheque has already been presented.
Number of Days Clearing	The number of days for a cheque or any item in clearing to be cleared.
Number of Dependants	If a client has any dependants, this indicates how many.
Number of Events Since Start	The number of standing order events since the account opening date.
Number of Items	This is the number of items included in a posting, it is used for charge calculations. The field is pre-filled with''1''.
Number of Transactions	The number of chargeable transactions made by the account since the last charge.
Occupation Code	This is a one character code representing a client's occupation. Occupation codes are set up on the General Purpose Narratives (GNARR) table, type OC.
Offset Interest Amount	This shows the amount of interest accrued on the account, which is offset against the account charges.
Offset Interest Basis	This is the number of days in a year over which offset interest is calculated. This can be **360** or **365**.
Offset Interest Rate Identifier	A code set up at installation that identifies the base rate that is to be used as the basis of an offset interest rate calculation. The codes are defined on the Base Rates Maintenance (BASEM) screen.
Opened By	This is the user code of the operator who opened the batch. User codes are set up on the Users Maintenance (USERS) screen, described in the *Guide to Setting Up*.
Opening Value Balance	On the Client Accounts in Overdraft Inquiry (CAODI) screen, this display field shows the value balance of the account when the current overdraft limit was originally applied.
Optional Account Number	The number that the system uses to identify an account. You must always enter a number for non-retail banking client accounts. A non-retail banking client account number is composed of up to twelve characters that can be a mixture of alphabetic and numeric characters (for external Trade Finance clients, account numbers must not exceed eleven characters).
Ordering Bank	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.

Field	Definition
Ordering Customer	This field can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Original Batch	If the transaction has been moved to the pending queue from a batch, and then returned to a different batch, this field shows to which batch the transaction originally belonged.
Original Currency	When the account has been converted to euros, this field will show the original account currency for future reference.
Other Assets	If a client has assets other than property or shares, this is the total value of those assets.
Other Expense	On the Personal Client Information–- Financial (CIFIP) screen, if a client has regular expenses other than rental and payments for loans, tax and insurance, this is its approximate value. On the Company Client Details–- Financial (CIFIC) screen, this is the value of expenses, other than loan interest, dividends, salaries, marketing and materials, that a client is due to pay during the current financial year.
Other Fixed	If the company has fixed assets not covered by any other asset field, enter the value of those assets in this field. This field is for documentary purposes only.
Other Holders	This field is only relevant to retail clients.
Other Income	If a personal client has a source of income other than a salary or share proceeds, its approximate value is recorded by this field. If a company client has a source of income other than from sales or generated by investments, its approximate value is recorded by this field.
Other Liabilities	This is the total of any liabilities, other than loans, that are held by a client.
Outstanding	On the System Monitor GUI screen, this shows the number of files still to be uploaded today from the system through the IBOS General Ledger Extractor Interface, described in the *Guide to Interfaces with External Systems*. The number of files outstanding is listed for each accounting centre.
Overdraft Limit	The maximum debit balance allowed on an account. Exceptions are given by reports CAJOURNAL–- Client Account Postings Journal and CAACOD–- Client Account Overdraft List. Overdraft limits for non-retail banking client accounts are set on the Client Account Static Details (WACCM) screen.
Override Balance Check	This indicated whether to reject or accept a hold fund input of which the hold amount is greater than the account balance. • On - Hold will be subtracted • Off - Transaction will be rejected (default)
Own Reference	This is a reference number assigned by your institution for this paired transaction. It can be viewed in the Reference Number field when inquiring on a paired transaction.
Pay Nostro	The number of the bank's pay nostro for an external standing order from a non-retail account.

Field	Definition
Payee	This is a documentary field indicating the payee on the cashier/official cheque.
Payment Amount	This field is used to define the amount of a standing order. It must be used in conjunction with the payment type (refer to the “Payment Type“ field) to cater for the various ways in which the amount to be transferred is derived.
Payment Frequency	A code indicating the frequency at which payments are to be made. These are defined on the General Purpose Narratives (GNARR) table, type FR.
Payment Type	This is the type of standing order: • **Fixed amount (AM)** A stated fixed amount • **Full balance (FL)** The balance in full • **Minimum balance (MN)** The amount required to "top up" an account's balance to a stated minimum amount • **Maximum balance (MX)** The balance in full, up to a stated maximum amount • **Above Maximum balance (OA)** The balance above a maximum amount
Payments Remaining	The number of payments outstanding on a standing order.
Periodic Charge Frequency	This field is only relevant to retail accounts.
Personal Cheque Number	The issued personal cheque number.
Post Directly to GL	This indicates whether postings due as a result of an online transaction should be posted to the general ledger online or during end-of-day processing. • On - Yes, post transactions online • Off - No, post transactions during end-of-day For retail banking accounts it is recommended that this field is set to No. For non-retail banking accounts it is recommended that this field is set to Yes.
Post Override	This indicates whether or not blocking on an account can be overridden. • On - Override active • Off - Do not override (default)
Postal Area	This identifies the postal area in which the client is located and is defined on the General Purpose Narratives (GNARR) table, type PR. Ensure that the postal country is set up to include the postal area, carried out on the Postal Areas by Country (CTPA) screen.

Field	Definition
Postal Code	This contains the Zip Code for an address. This field is only visible when the Blueprint Parameter BP-ZIP-CODE is set to Yes. See Blueprint Parameters in the *Guide to Setting Up* for more information.
Postal Country	This identifies the country in which the client is located, this is set up on the Countries table (CNTRY).
Posted Amount	This is the amount of the charge actually applied to the account, after the “Calculated Charge Amount” is adjusted to take into account interest offset against the charges.
Posting Narrative	The narrative that will be printed on a client’s advices.
Posting Type	The type of accounts to which the postings in the batch are being made: • Client Account (C) • General Ledger (G) Cash Wastes is indicated by this field if the batch you are inquiring on was entered using the Cash Wastes (CASHW) screen. You must use the Cash Wastes screen to inquire on, or amend, postings entered on that screen. On the Management Services Queue (BANQI) screen, select the posting type to be displayed: • Credit (C) • Debit (D)
Preferred media for notification	This field is used to enter the type of media preferred for notification.
Prime Holder	This field is only relevant to retail banking accounts.
Printed/Unprinted Items	This indicates whether you want to view postings that have already been printed, or postings that were not printed because the “Payment Indicator” was not set on when the posting was entered. • Printed (P) - Printed Postings • Unprinted (U) - Unprinted Postings
Priority Queue Level	Indicates the priority that should be applied to transactions of the specifiied Transaction Type when placed on the Pending Queue.
Produce MT940	Set on if MT940 messages are to be produced for the client.
Product Code	This field is only relevant to retail banking accounts.
Product Name	This field is only relevant to retail banking accounts.
Profit and Loss	At the end of a financial year this represents the value of profit or loss made by a company client. This field is for documentary purposes only.

Field	Definition
Prompt Narrative	This is the description that is displayed for this prompt and transaction type combination when a transaction is entered on the Management Services Transaction Maintenance (CATRM) screen.
Prompt Number	A unique identifier given to each prompt for a Transaction Type used in Management Services batch processing.
Property	If a client owns property (with no outstanding mortgage), this is its approximate value. This field is for documentary purposes.
Property Status	This indicates whether a client owns the home they live in or whether it is rented: • Owned (O) • Rented (R) • Family Home (F) • Communal Accommodation (C) This field is for documentary purposes only.
Property Value	This is the value of any property owned by a client. This field is used for documentary purposes only.
Quantity	On the System Monitor GUI screen, this field shows the number of payments contained in the batch.
Queue Type	On the Management Services Queue (BANQI) screen, select the required queue to be displayed: • Pending Queue (P) • Back Valued Queue (B)
Rate	For the Withholding Tax table (CRTXM), the rate at which withholding tax is applied. On the Management Services Transactions for Analysis (TRCKM) screen, this indicates the charge to be applied to the paired transactions with that transaction reference. This can either be flat or variable, defined in the Rate Type field.
Rate Type	Indicates whether a Flat or Variable rate should be used when applying charges to an account when processing Account Analysis. The Account Analysis charge parameters are entered on the Management Services Transactions for Analysis (TRCKM) screen. Flat (F)–- The charge is only applied once. Variable (V)–- The charge is applied for each transaction.
Rate Variation	The amount the specified base rate is to be adjusted by to create the required “Offset Interest Rate”. If the Offset rate is to be less than the base rate precede the adjustment amount with a minus sign.
Rating	The rating for the counterparty, for example, AAA.
Rating Before	This is the rating that was last entered.

Field	Definition
Receivers Correspondent Bank	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Reconcile Batch	This indicates whether all entries for a batch have been input and postings should be made on the appropriate value dates. • On – Yes • Off - No (this is the default) On the Batch Close (BCLOS) screen a batch cannot be reconciled if the 'Entered' figures do not match the 'Calculated' figures. Once reconciled, batches cannot be changed.
Reference	On the Management Services Queue (BANQI) screen, this is the reference number for the original transaction.
Reference Number	On the non-retail banking client account posting screens, this is a unique number assigned by the system that identifies an individual posting being made for a specified accounting centre. For standing orders this is the unique reference number that identifies the standing order. For the Client Account Management Services (CMS) functionality, this number is the reference number assigned to a paired transaction by your institution, and can be seen when inquiring on a transaction. It is assigned on the Management Services Transaction Maintenance (CATRM) screen in the 'Own Reference' field.
Reference Sequence Number	For non-retail banking client account charges, it uniquely identifies the account charge. It also denotes the order in which the charge is displayed for a specified account.
Registration Date	This is the date on which the company was formally registered. The date is the format DDMMYYYY. ***Note:*** *'Registration Date' cannot be earlier than 01011857. If the company registered earlier than this, you are advised to enter 01011857 and maintain a manual record of the actual date.*
Registration Number	This is the client's company registration number. This number should be unique and can be used as a key identifier for the client.
Related Reference	This field can be found on an MT202 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Rental	If a client rent's a home, this is the rental payment amount. This field is for documentary purposes only.
Report Name	On the System Monitor GUI screen, this shows a list of the reports running in the system.
Reserves	The value of funds held in reserve. This may be to meet capital adequacy requirements or to make provision for potentially delinquent loans. This field is for documentary purposes only.

Field	Definition
Reversal Number	On the Cash Wastes (CASHW) screen, this is the posting number of the original posting that is to be reversed.
Reversal Reference Number	The reference number of a transaction or posting to be reversed. This is the number that identifies the posting for each account. This number can be found on the Postings Inquiry by Account (POSTI) screen in the Reference Number field.
Review/ Review Date	The date on which the limit is to be reviewed.
Run Date	On the System Monitor GUI screen, this shows the date on which the report was initiated.
S.W.I.F.T. Address	This is the S.W.I.F.T. address of the client. It should be 8 or 11 characters in length.
S.W.I.F.T. Capable	Indicates whether the client is capable of sending and receiving S.W.I.F.T. messages.
S.W.I.F.T. Message Priority	This field contains the S.W.I.F.T. Priority of the message. For an exact definition, refer to the S.W.I.F.T. documentation.
S.W.I.F.T. Priority	This field contains the S.W.I.F.T. Priority of the message, taken directly from the S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
S.W.I.F.T. Transfer Method	This may be MT103, MT202, or Cover (that is, both MT103 and MT202 are generated). If this field is not completed, an MT202 message is generated. • Blank (this is the default) • MT103 • MT202 • Cover
Salaries	This is the total value of salaries that a client is due to pay during the current financial year. This field is used for documentary purposes only.
Salary	This is a client's salary in base currency. This field appears on both the Personal Client Details–-Employment (CIEMP) and the Personal Client Details–-Financial (CIFIP) screens. The system does not check that the value is consistent on both screens for a client, therefore it is up to you to ensure that the values you enter are correct.
Sales	This is the total value of sales made by a client. This is an annual figure. This field is for documentary purposes only.
Savings Account	This is the client account to which surplus should be transferred during Sweep processing. The account entered must be unique across all accounts identified as Grandparent Accounts.

Field	Definition
Screen Name	The mnemonic of the screen to which the charge defaults apply. This can be one of the following only: CACCN - Client Account Credit Control screen CACR - Client Account Credit screen CADCN - Client Account Debit Control screen CADCQ - Debit Cheque screen CADR - Client Account Debit screen CASHW - Cash Wastes screen CHEQA - Cashier/Official Cheque Issue CHEQP - Cashier/Official Cheque Payment CPAY1 - Clean Payments Addition screen
Select Client	Enter the number that is adjacent to the client that you wish to select.
Senders Correspondent Bank	This field can be found on MT103 or MT202 S.W.I.F.T. messages. For an exact definition, refer to the S.W.I.F.T. documentation.
Sensitive Account	This is used to identify non-retail client accounts that require special attention. Only users who are able to gain access to sensitive accounts (as set up on the Users Maintenance (USERS) table) can gain access to these accounts: • On - Requires special attention • Off - Requires no special attention (this is the default)
Sequence	A number used to indicate the priority of a payment should an account require more than one standing order to be actioned on the same day. If you enter duplicate sequence numbers, the system sorts them according to the sort order specified on a blueprint parameter (see “Blueprint Parameters” in the *Guide to Setting Up* for details). This blueprint parameter specifies a sort order by amount: the standing order with the lowest amount is paid first and the highest last or vice versa.
Sex	This indicates whether a client is male or female: • Male (M) • Female (F)
Shares	In the ‘Income’ section of the Personal Client Details–- Financial (CIFIP) screen this is the approximate value of income generated by any shares held by a client. In the ‘Assets’ section of the Personal Client Details–- Financial (CIFIP) screen this is the approximate value of any shares held by a client. These fields are used for documentary purposes only.
Short Loans	The value of short term loans held by a client. This field is used for documentary purposes only.

Field	Definition
Short Name and City	The shortname of the non-retail banking client and the mnemonic of the city of residence.
Shortname	The shortname of the client. This is set up on the Client Details– - Banking (CIWSL) screen. This is relevant to clients associated with non-retail banking functions only. Also see 'Client Shortname'.
Show Amount	Indicates whether the Account History Inquiry (HISTA) screen shows the account balance or the interest outstanding on the date shown. • Balance (B) • Accrual (A) • Settled (S)
Show Euro Equivalents	Selecting this field when inquiring on an account will return the balance automatically converted into Euros • On - Show account in euros • Off - Show account in default currency
Sold Accounting Centre	The mnemonic of the foreign exchange accounting centre to which you are selling your currency.
Sort By	On the Management Services Queue (BANQI) screen, select the order for the inquiry results display.
Sortcode / ABA Number	This is the sortcode of the accounting centre responsible for the client. The ISO standard name is the ABA number.
Specialist	On the System Monitor GUI screen, this lists the Client Account Management Services (CMS) specialists in the system.
Specific Agreements	This is a free-format text field for recording the details of any specific agreements relating to a trust client.
Staff Member	Switch "On" this field if the client account belongs to a member of the staff. • On - Staff member account • Off - Not a staff member account
Standing Order Number	The 12 digit unique standing order number generated by the system and its reference format is ppffffff0000, where: pp - is the standing order prefix, the blueprint value (from 00 to 99) is used as the prefix . ffffff - is a running sequence generated by the system unique to the prefix.
Standing Order Reference / Sequence	This is the Reference Number and Sequence Number of the standing order.

Field	Definition
Standing Order Type	This indicates a type of standing order: • CA to CA - Client Account to Client Account • CA to GL - Client Account to General Ledger • CA to external - Client Account to external third party account • GL to GL - General Ledger to General Ledger • GL to CA - General Ledger to Client Account • GL to external – General Ledger to external third party account On the Clean Payments from Standing Orders (SOPRQ) screen, this defines whether the clean payments displayed in the inquiry will be to internal accounts, or to external accounts.
Start Account	On the Management Services Queue (BANQI) screen, enter the account number from which the inquiry is to start.
Start Account Definition/Ccy	On the Client Accounts for Client Type (CAACM) screen, this is the Account Definition ID and currency to begin searching from.
Start Account Number	On the Client Accounts Inquiry (CIBAL) screen, this is the point in the list of Client Account Numbers from which you want the inquiry to begin. Client account numbers are assigned either automatically by the system when an account is opened or they are assigned by you on the Client Account Type Selection (PTCAT) screen.
Start Accounting Centre	The accounting centre from which the inquiry will start.
Start Amount	On the Management Services Queue (BANQI) screen, enter the starting amount from which the inquiry is to start.
Start Batch Number	The batch number from which the inquiry will start.
Start Cheque Number	The number of the first cheque that is to be stopped.
Start City	This is used in conjunction with the “Start Shortname” field to identify the client with whom you want the inquiry to start.
Start Client Type	The client type from which you want the inquiry to start.
Start Contract Number	The contract number of the clean payment you want the inquiry to start from.
Start Date	On the Client Details – Banking (CIWSL) screen this is date from which a client may be used by the system. This defaults to today’s date. On the Batch Inquiry (BTCHI) screen, this is the date from which the inquiry is to start. Only batches opened after this date will be displayed.

Field	Definition
Start Hold Number	The reference number of the hold with which you want the inquiry to start.
Start Prompt Number	The prompt narrative number from which the inquiry will start.
Start Shortname	The client shortname from which you want the inquiry to start.
Start Transaction Identifier	The Transaction Identifier from which the inquiry will start.
Start Value Date	Enter a date to limit the inquiry to clean payments with start dates after the entered date.
Start/End of Day	This indicates whether postings are to be applied at "Start of Day" or "End of Day" for the duration of the standing order: • Start of Day (S) • End of Day (E) ***Note:*** *This applies to Standing Orders that apply to non-retail banking client accounts and general ledger accounts only.*
Starting Account	On the Client Account Generation for Client (CAGCM) screen, this is the account number from which to start the account generation.
Starting Currency	On the Client Account Generation for Client (CAGCM) screen, this is the currency from which to start the account generation.
Starting Date	The date from which you want the inquiry to start.
Statement Address	On the Client Account Definition Maintenance (CAADM) screen, this indicates the number of statement copies to be sent to each of the client addresses set up on the Client Names and Addresses (NAMDM) screen. This is a nine digit numeric code. For example: 100200010 Each digit represents the number of copies to be sent to each address. In this example, one copy is sent to address one; two copies are to be sent to address four (the fourth digit) and one copy to address eight (the eighth digit). **Note:** *If this field is set to 000000000, then one copy of the statement is to be printed, but held at the originating branch for the client to collect.*
Statement Collected	This indicates whether the statement is to be collected by the client. • On - Yes, statement is to be collected • Off - No (this is the default)
Statement Copies	The number of statement copies to be sent to each address of the client. This is shown as a nine digit number. Each digit refers to one of the addresses of the client, the number (0 to 9) being the number of copies to be sent to that address.

Field	Definition
Statement Currency	This field allows the client to have statements in either the original currency, in euros or in both. There are three options: **Default** (D) - Statements are printed in the present account currency. **Original** (O) - Statements are printed in the original, pre-conversion currency. **Both** (B) **-** Statements are printed in both currencies.
Statement Frequency	This indicates how often statements are produced for an account. Frequency codes are defined on the General Purpose Narratives (GNARR) table, type FR.
Statement Message	A code (set up on the General Purpose Narratives (GNARR) table, type CF) to identify the message that is to be printed on the statement counterfoil.
Statement Number	The number assigned to a statement by the system when it is produced. Statement numbers are assigned sequentially. The statement number can be used to identify an individual statement for an account.
Statement Suppress	This indicates whether this posting is to appear on a statement: • On - Show posting on statement • Off - Suppress posting on statement (this is the default)
Statement Type	This indicates whether statements for this client account are to be printed, generated as S.W.I.F.T. messages, sent to SMART or printed and sent to SMART. The default is printed messages. • Printed (P) • S.W.I.F.T. (S) • MT950 Extract (N) • MT950 Extract and Print (B) • S.W.I.F.T. and Print (T)
Status	On the Standing Order Input (SOSTM) screen, this indicates the status of the instruction: • **Unactioned** No payments have been made under the instruction • **Unauthorised** The instruction is waiting for authorisation • **Active** At least one payment has been made and the instruction is in use • **Expired** The Last Payment Date on an instruction has passed • **Cancelled** The Cancellation Date (if entered) has passed • **Deleted** The instruction has been deleted On the System Monitor GUI screen, this field shows the status of the batch.

Field	Definition
Stock Exchange	On the Client Account Maintenance (CAHDR) and client Account Definition Maintenance (CAADM) screens, set this asset management field if settlement is to be actioned through a stock exchange.
Stock Value	This is the value of any stock held by a client. This field is used for documentary purposes only.
STP for Inbound Settlements	Checking this box will allow the system to process Inbound STP (straight through processing) contracts for this client. The maximum size of contract allowed is governed by the “Limit” field on the same screen.
STP for Outbound Settlements	Checking this box will allow the system to process Outbound STP (straight through processing) contracts for this client. The maximum size of contract allowed is governed by the “Limit” field on the same screen.
Supplementary Entry	This field is used by the IBOS General Ledger Extract interface, part of the Client Account Management Services functionality. This interface is described in the *Guide to Interfaces with External Systems*. This indicator determines whether back valued transactions from this account are to be posted in the current accounting period, or the accounting period from the back value. • On - Post in back value period • Off - Post in this period
Suppress Client Advices	This indicates whether client advices are to be suppressed. • On - Yes, suppress advices • Off - No, print advices
Suppress Statement	This indicates whether a statement is to be suppressed for reversals. • On - Suppress Statements • Off - Do not Suppress Statements
Sweep Multiple	This indicates the multiple which must be applied when transferring amounts in Sweep processing. Any amount transferred must be a multiple of this figure.
Taken Date	The date upon which a client made the withdrawal for which the notice record applies.
Target Balance	The balance for the account that sweep processing is attempting to maintain. For child accounts amounts will be transferred up to or down from the parent account to reach this target balance. For parent accounts amounts will be transferred up to or down from the grandparent account to reach this target balance.
Tax Code	This is the client’s tax code, where relevant. This number should be unique and can be used as a key identifier for the client.

Field	Definition
Tax Identifier	Generic text to describe further tax details for an account that may be entered on the Client Account Management Services Details (CAEXM) screen. This field is for documentary purposes only.
Tax Payments	This is the total value of any tax payments to be made by a client in a year.
Tax Provision	This is the amount a client keeps in reserve in respect of estimated tax liability. This field is for documentary purposes only.
Tax Rate	This is the tax rate that the client is subject to. At present, this field is used for documentary purposes only. • Default (that is, unknown) • Basic (B) • Higher (H) The available options are Default, Basic, or Higher.
Tax Withheld	If a client is liable for withholding tax, this is the amount of tax withheld to be paid over to the tax authority.
Telephone Number	This is the contact telephone number for a client.
Telex Number	This is the contact telex number of a director, owner or individual who has power of attorney over a client.
Term (in days)	The term (in days) up to which fixed deposits are liable to withholding tax.
Time Added	This is the time that the transaction was placed on the Management Services Queue.
Title	This is the title used by a personal client, for example Mr, Mrs or Miss.
To Charge Settlement Date	On the Account Charges Review and Post (CACRP) screen, the date up to which charges are deemed to have been 'reviewed' individually (without first having to been seen) and confirmed for posting.
Total	On the System Monitor GUI screen, this shows the number of accounts in overdraft for each accounting centre.
Total Amount	The total value of a posting. The total may consist of several vouchers.
Total Amount of Debit Events Since Start	The total debit amount since the account opening date.
Total Amount of Debit Events Year to Date	The total debit amount since the start of year.

Field	Definition
Total Assets	On the Personal Client Information - Financial (CIFIP) screen, this is the total value of a client's assets. It is composed of the values in the Property, Shares and Other Assets fields in the 'Assets' section of the screen. It is calculated by the system. On the Company Client Information - Financial (CIFIC) screen, this is the total value of assets held by a client. This is composed of the values in the Accounts Receivable, Cash on Hand, Property Value, Investment, Other Fixed and Stock Value fields. It is calculated by the system.
Total Clients Identified	The number of clients that match the selection criteria entered on the Client Identification (CACII) screen.
Total Credit Amount	The total value of credit postings in a batch.
Total Credit Items	The total number of credit items in a batch.
Total Debit Amount	The total value of debit postings in a batch.
Total Debit Items	The total number of debit items in a batch.
Total Expense	On the Personal Client Information - Financial (CIFIP) screen, this is the total value of a client's expenses. It is composed of the values in the Rental, Loan Payments, Tax Payments, Insurance and Other Expenses fields. It is calculated by the system. On the Company Client Information - Financial (CIFIC) screen, this is the total of the values in the Loan Interest, Dividends, Salaries, Marketing, Material and Other Expenses fields. It is calculated by the system.
Total Income	This is the total value of a client's income. For personal clients it is composed of Salary, Shares, Business and Other Income. For company clients it is composed of the values in the Investment, Sales and Other Income fields. It is calculated by the system.
Total Liabilities	On the Personal Client Information - Financial (CIFIP) screen, this is the total value of liabilities recorded for a client. It is composed of the values held in the 'Loans' and 'Other Liabilities' fields. It is calculated by the system. On the Company Client Information - Financial (CIFIC) screen, this is the total of the values in the Accounts Payable, Equity Capital, Short Loans, Long Loans, Depreciation, Tax Provision, Contingency and Reserves fields. It is calculated by the system.
Trade Finance Address	The number of the address (set up on the Client Names and Address (NAMDM) table) to be used for Trade Finance deals for this client.
Transaction Identifier	For transactions entered on the Management Services screens, this is a code identifying the type of transaction. To use a transaction identifier, it must have been entered on the Management Services Transaction Details (TRDTM) screen.
Transaction Name	This is the name of the transaction.

Field	Definition
Transaction Reference	Identifies those transactions that are to be tracked in Account Analysis processing for the specified account. A valid Transaction Identifier or Clean Payment Product Code may be entered as a transaction reference. This field is on the Clean Payment Message Input Screen One – 103 (CP100) and Clean Payments Message Input Screen One – 202 (CP202) screens, and contains information found on an MT103 and an MT202 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.
Transaction Type	This defines the type of transaction. This can be either: • Standard Transaction • Debit Cheque Transaction • Credit Reversal Transaction • Debit Reversal Transaction
Transfer /Minimum Amount	For standing orders of payment type "Above Maximum Balance", this is the amount defining the level above which the standing orders are deemed to be significant. If a transfer value is less than this amount the standing order will not be affected. For standing orders of payment type "Minimum Balance" this is the amount above which a transfer of funds will take place to maintain a minimum balance.
Transfer Account	The number of an account to which the outstanding balance, interest and account charges are to be posted. If the balance is zero, an entry is not required.

Field	Definition
Transfer or Transfer Type	For the Client Account Credit (CACR) and Client Account Debit (CADR), Client Account Credit Control (CACCN) and Client Account Debit Control (CADCN), the Debit Cheque (CADCQ) and Cash Wastes (CASHW) screens, this is a code indicating the payment and transfer instructions and subsequent charge messages. The following formats are used: **Snnn** - for entries related to payment and transfer instructions being sent through S.W.I.F.T., the last 3 characters are used to indicate the S.W.I.F.T. message type (number). **Naaa** - for entries related to payment and transfer instructions, not sent through S.W.I.F.T. or where an alpha description is preferred, the last three characters are used to indicate: **BOE** - Bill of exchange **BRF** - Brokerage fee **CHG** - Charges and other expenses **CHK** - Cheques **CLR** - Cash letter/cheques remittance **COL** - Collections (used when entering a principal) **COM** - Commission **DCR** - Documentary credit (used when entering a principal) **DIV** - Dividends - Warrants **EQA** - Equivalent amounts **ECK** - Eurocheques **FEX** - Foreign Exchange **INT** - Interest **LBX** - Lock Box **LDP** - Loan Deposit **MSC** - Miscellaneous **RTI** - Returned item **SEC** - Securities **STO** - Standing Orders **TCK** - Travellers cheques **TRF** - Transfer **VDA** - Value date adjustment (used when an entry is made to withdraw an incorrectly dated entry it will be followed by the correct entry with the relevant code). On the Standing Orders Input (SOSTM) screen, for standing orders of type "Minimum Balance", this is the code that identifies which conditions govern the transfer. The codes and their meanings are: 1. The transfer is to be made only if the transfer amount exceeds that entered under "Transfer Minimum Amount". 2. The transfer amount is that entered under "Transfer/Minimum Amount", irrespective of the actual amount required to make up the balance. 3. The transfer amount must equal the actual amount required to make up the balance (entered as "Payment Amount") plus the value entered under "Transfer/Minimum Amount".
Transfer to Savings	This indicates whether surplus should be transferred to a Savings account in Sweep processing.

Field	Definition
Trustee Investment Act	This field should be set on if the UK Trustee Investment Act (1961) applies to the client on the Client Details – Trust (CITRS) screen. This field is for documentary purposes only.
Type of Trust	For clients with the category of Trust, this is the trust type, as defined on the Client Types Maintenance (CICTM) screen.
Up/or Down	This indicates whether the last movement in the rating was up or down.
Update Action	This defines the type of update action. This can be either: • New • Changed • Deleted • New • All Select the value from the drop down list on the GUI and only such Standing Orders are displayed.
Update Flag	On the Client Accounts for Client Type (CAACM) screen, set the flag against the Account/Portfolio Definition ID to be used for the client type. On the Client Account Generation for Client (CAGCM) screen, unset the flag against the automatically generated Account ID if it is not required.
Updated Time	This is the time when the last update was carried out.
Uploaded	On the System Monitor GUI screen, this shows the number of files uploaded today from the system through the IBOS General Ledger Extractor Interface, described in the *Guide to Interfaces with External Systems*. The number of files uploaded is displayed for each accounting centre.
Usercode	On the System Monitor GUI screen, this shows the usercode of the user who initiated the report. Usercodes are set up on the Users Maintenance (USERS) screen, described in the *Guide to Setting Up*.
Value Balance	The total balance of an account, excluding all postings that have not come to value and cheques or drafts in clearing. The value balance is updated on each value date. Interest is calculated using this balance.
Value Balance as of	The total balance of an account, excluding all postings that have not come to value and cheques or drafts in clearing. The value balance is updated on each value date. Interest is calculated using this balance. This is as of the date shown.
Value Date	The date on which a transaction or event comes to value. This can be forward of the as-of date. The maximum number of days forward you may date a posting is determined at installation. For postings, if you do not enter a value date, the as-of date is used.
Value Date/ Currency/Amount	These fields can be found on an MT103 S.W.I.F.T. message. For an exact definition, refer to the S.W.I.F.T. documentation.

Field	Definition
Value Dates	The date on which the clean payment comes to value. One date is shown for the debit side of the transaction, and one date for the credit side.
Value/Issue Date	The issue or value date for the issued cheque.
VAT Number	If the client is registered for Value Added Tax, this is the VAT registration number. This field is used for documentary purposes only.
View Incomplete SO	This is used to indicate whether or not to view unauthorised standing orders including the incomplete standing orders. • On – Yes • Off – No (this is the default)
Visa Expiry Date	For overseas clients based in the country of your institution, this is the date on which their visa expires. This field is used for documentary purposes only.
Visa Number	For overseas clients based in the country of your institution, this is an identification number shown on their visa. This field is used for documentary purposes only.
Vouchers Sent	This is used to indicate whether or not vouchers, for example processed cheques, are enclosed together with the statement. • On – Yes (this is the default) • Off – No
Watch Date	The watch date specified by the relevant rating agency.
What If?	On the System Monitor GUI screen, this shows the number of Sweeps that have yet to be finalised by the CMS specialist. This is part of the Client Account Management Services (CMS) functionality, described in Appendix C of this guide. To finalise the sweeping of funds for an account, you must use the EODPREP - End-of-Day Preparation report, described in the *Overnight Reports Guide*.
Withholding Currency	This is the currency in which the Withholding tax is paid. Currencies are set up on the Currencies (CCYS) table.
Withholding Tax Interest Reported Indicator	This shows if the interest on Withholding Tax has been reported to the Tax Authority. • Reported (Y) - Interest reported • Not Reported (N) - Interest not reported • Client (C) - Interest reported by client
Withholding Tax Liability Indicator	This indicates whether the client is liable for Withholding Tax: • On – Liable for Withholding Tax • Off – Not liable for Withholding Tax
Zip Code	This field is only displayed if blueprint BP-ZIP-CODE is set to “Y”. It represents the Zip Code of the client’s address. This is used in client statements.

Appendix A
US-Specific Functionality

Introduction

This appendix gives details of the functionality of the Client Accounts module that is specific to the United States of America.

Availability of Deposited Funds

The system provides the capability of controlling the availability of deposited funds in accordance with United States banking regulations. In order to utilise this functionality, blueprint parameter BP-FAVL-CONT must be set to 'Y' (see "Blueprint Parameters" in the *Guide to Setting Up*).

The rules for controlling the various types of deposit are defined using the General Purpose Narrative (GNARR) tables, type ST and FA.

Table type ST gives a list of the deposit codes and their descriptions. These deposit codes are input into the Narrative field on the Client Account Credit (CACR) screen (see Section 4), when you are entering details of the deposit.

When details of the deposit have been entered, then the funds will be held in accordance with US banking regulations and the holds can be viewed using the Hold Funds Inquiry (HOLDI) screen.

Table type FA defines the clearing rules for the deposit codes entered in table ST. In table FA the Narrative Key contains the deposit code, the Narrative Text contains an algorithm for the clearing days. The first three characters of the Narrative Text represent the number of business days to clear the funds for an existing client; the second three characters represent the number of business days to clear the funds for a new client.

***Note**: - If a deposit code occurs in table ST but not in table FA, then United States banking regulations are not applied.*

Standard values for tables ST and FA are given below. These values should not be changed.

Deposit Codes on General Purpose Narrative Tables ST and FA

Deposit Code	Description (on Table ST)	Clearing Algorithm (on FA)
CDT	Cash Deposit	001001
EPD	Electronic Payment Deposit	001001
INP	Interest Paid	001001
ITD	Internal Transfer Deposit	001001
OBL	Opening Balance	001001
TRD	Transfer Deposit	001009
XDT	Cheque Deposit	-
XLC	Local Cheque Deposit	003009
XNC	Non Local Cheque Deposit	005009

Withdrawals on Money Market Accounts

If a client account is to be used as a Money Market account in accordance with US Banking Regulation D, then the system provides the functionality to stop interest being paid on the account when there are more than six cash withdrawals or more than three cheque withdrawals per month.

In order to utilise this functionality, blueprint parameter BP-MM-WITHDRW-CONT must be set to 'Y' (see "Blueprint Parameters" in the *Guide to Setting Up*).

A client account is specified as a Money Market account by giving it a General Ledger backing account that is held on the General Purpose Narrative (GNARR) table type MM. The following is an example of table type MM:

Narrative Key (Code)	**Narrative Text (GL Account Number)**
GL1	003026001000
GL2	003026002000

The types of withdrawal made against the Money Market accounts are defined on the General Purpose Narrative (GNARR) table type TI (MM Non Internal Withdrawals). An identifier in the range 000001 to 000100 indicates that the posting is a cash withdrawal, whereas an identifier in the range 000101 to 000200 indicates that the posting is a cheque withdrawal.

Narrative Key (Posting ID)	**Narrative Text (Withdrawal Code)**
000001	CWL
000002	EPW
000101	TRW
000102	XWL

To obtain a list of the Money Market accounts that have exceeded the allowed number of withdrawals during the current month, run the MMWITH - Money Market Account Withdrawals report, see the *On-Demand Reports Guide* for details.

Appendix B
Calculations

Introduction

This appendix gives the calculations used by the Client Accounts module.

Interest

$$Interest = principal \times rate\,per\,annum \times fraction\,of\,year$$

This simple interest calculation applies to client accounts, money market loans and deposits, commercial loans, commercial loans commitment fee, certificates of deposit and foreign exchange interdepartmental deals.

Interest Accrual

The way that the interest accrual figure for an account is calculated depends on the interest basis used by the account.

Daily Interest Accrual for Actual/360, Actual/365 and Actual/Actual Bases

$$\frac{Amount \times Interest\ Rate}{100 \times Interest\ Basis}$$

'Interest Basis' can be:

Actual/360 - 1/360th of the annual interest is charged per elapsed day

Actual/365 - 1/365th of the annual interest is charged per elapsed day

Actual/Actual - For leap years only, 1/366th of the annual interest is charged per elapsed day

'Amount' is the value balance for accounts that use flat or all up interest levels. For accounts that use sliced interest, a separate calculation is done for each slice; the sum gives the interest accrual figure for the account.

Daily Interest Accrual for 12 Month/Year Basis

$$\frac{Amount \times Interest\ Rate}{100 \times 12 \times Number\ of\ Days\ in\ Period}$$

This is the daily interest accrual calculation.

Client Account Average Balance

Average balance is held for non-retail banking client accounts only.

The overall average balance for a period thus far is calculated using the following formula:

$$\frac{(No.\ Days\ in\ CR \times Average\ CR\ Balance) - (No.\ of\ Days\ in\ DR \times Average\ DR\ Balance)}{Total\ Number\ of\ Days\ in\ Period\ to\ Date}$$

Appendix C
Client Account Management Services

Introduction

Client Account Management Services (CMS) is a set of functions that allows a designated user more control over marked accounts. The following functionality is available:

- Production of Account Analysis reports, which perform the following functions:
  - Displaying information on an account
  - Tracking of the transactions posted to an account
  - Grouping together of charges into a monthly total charge amount
- Maintenance of account target balances in a hierarchy of accounts
- Checking of account balances before transactions are posted to marked accounts to ensure sufficient funds are available. This is known as negative balance checking
- Immediate posting of charges made to a client account during transactions

The tracking of transactions, negative balance checking and immediate posting of charges features require batched postings to client accounts to be made using only Paired Transactions. A paired transaction consists of the original posting, and a balancing posting to a contra account (which can be either a client or general ledger account). Paired Transactions are described later in this section.

The CMS functionality cannot be used in conjunction with the Batch Authorisation functionality described in Section 4 of this guide.

Account Maintenance

Account Analysis Reports

Account analysis allows you to report on the condition of either individual or groups of accounts. Each account must be marked as requiring account analysis, must be assigned to an account analysis group, and must be assigned a Client Account Management System (CMS) Specialist. A user can be defined as a CMS Specialist on the Dealers and Officers (DEALR) screen, see the *Core Functions and Inquiries Guide* for more information.

A list of the CMS Specialists in the system and the accounts assigned to them is available on the CMS Account Analysis screen. This screen is only available on the GUI, and is later in this section.

Account analysis is performed using the CAACANAL - Account Analysis Statement report, described in the *On-Demand Reports Guide*. This report can either be run on-demand for an individual report or group of reports, or included in the Overnight run process, and it performs the following functions:

- Report Production
- Transaction Tracking
- Calculation of Charges
- Placement of Charges on the Charges Review Queue (CACRV)

Report Production

The CAACANAL - Account Analysis Statement Report includes the following information:

- Average Daily Balance
- Earnings Credit
- Volume and charges applied to tracked transactions
- Total Monthly Charge
- Net Profit/Loss

When producing a report for a group of accounts, a statement including the above details is produced for each account in the group, along with a summary statement for the entire group.

Transaction Tracking

Account analysis allows a CMS Specialist to track the Paired Transactions that are being posted to an account. Before a paired transaction can be included in an account analysis report, the Transaction Id must be included on the Management Services Transactions for Analysis (TRCKM) screen. This screen also allows a CMS Specialist to determine the rate to be charged for transactions, which can be different for each account.

Paired Transactions are described in more detail later in this section.

Charges in Account Analysis

When an account is marked as requiring Account Analysis, the charges that are made of the account can be posted in the following ways:

- Charges can be collected into a Monthly Payment Charge, which can then be reviewed, and posted.
- Charges can be reviewed, adjusted if necessary, and posted individually to the account.

All charges must be defined on the Account Charges Static Details (CACHM) screen, then linked to an account and transaction type on the Management Services Transactions for Analysis (TRCKM) screen.

When they have been generated via the CAACANAL - Account Analysis Statement report, all charges must be viewed and released via the Account Charges Review and Post (CACRP) screen. By entering a Client Account number on this screen, an individual charge can be reviewed and the amount adjusted if required. If the amount is set to zero, then the charge will be waived and not posted. After an individual charge has been reviewed the status will change to ‘R’ (Reviewed).

Once all individual charges that require review have been processed, all remaining charges can be automatically marked as reviewed by entering a Charge Settlement Date of Today. This will change the status of all remaining charges to ‘R’ (Reviewed).

The Charges Posting (CACHPOST) report must be initiated in sleeping mode and will process all charges with a status of ‘R’.

Any charges that will settle to client accounts with a Negative Balance Checking (NBC) indicator (see Negative Balance Checking) will have their status changed to ‘W’ (Pending) instead of ‘R’ and a record will be created on the Pending Queue. These charges will be released in accordance with the NBC rules, either automatically by the RELPENDQ sleeping report or manually ‘Rushed’ from the Pending Queue using the Management Services Queue (BANQI) screen.

When a charge is released from the Pending Queue the status of the charge will be updated to ‘R’ (Reviewed), so that the charge can be processed by the Charges Posting (CACHPOST) sleeping report, which will pass the relevant details to the accounting models for posting. The Charges Posting (CACHPOST) report will pass a unique LINE-NUM and hard-coded TRANS-ID = ‘NAAC’ to be included on the posting record.

If the charge will settle to a client account without a NBC indicator, then the Charges Posting (CACHPOST) report will update the charge status to ‘P’ (Posted) and the relevant details will be passed to the accounting models for posting.

If a charge is deleted from the Pending Queue, the status will be changed from ‘W’ to ‘U’ and the amount changed to zero.

If a charge with a status of ‘W’ is amended so that amount is zero on the Account Charges Review and Post (CACRP) screen, the corresponding record will automatically be deleted from the Pending Queue.

If the Charge Settlement Account is blocked, then the posting will be made to the relevant Error Suspense Account. The Management Services Queue (BANQI) screen will ensure that any Pending Queue items where the Charge Settlement Account is blocked cannot be released.

Maintaining Account Balances

The system allows you to sweep funds between different accounts in a hierarchy to maintain these accounts at their target balance. All these accounts must have the same currency. Before an account is eligible to use this functionality, you must complete the relevant details on the Client Account Management Services Details (CAEXM) screen.

The following diagram shows the group hierarchy used for the sweeping of funds between accounts:

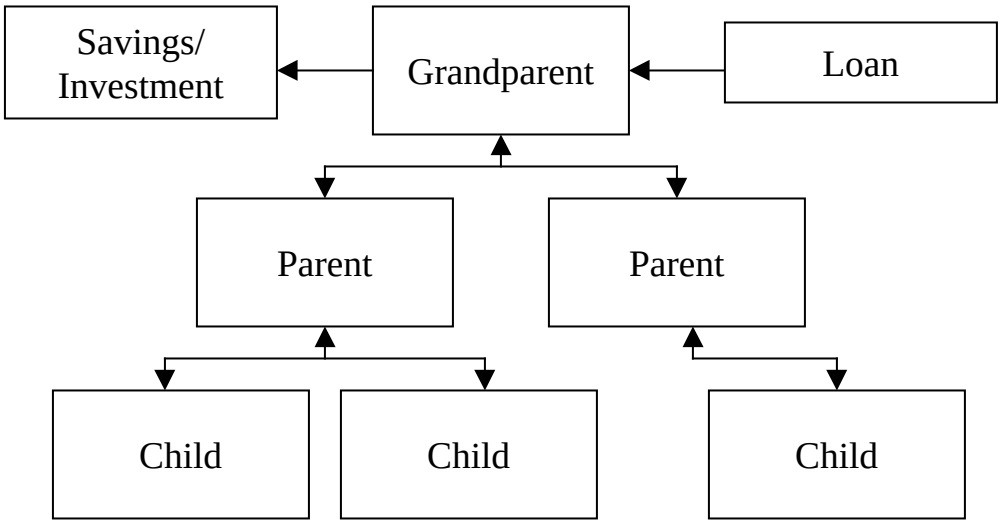

Figure C-1. Account Hierarchy

This process aims to get the grandparent, parent and child accounts to their target balances. Any funds left over after this can either be swept to a savings account, invested, or left in the grandparent account. The order in which the accounts' target balances are maintained is as follows:

- Child accounts are altered to the target balance, sweeping funds to or from the parent account to achieve this.
- Parent accounts are altered to the target balance, sweeping funds to or from the grandparent account to achieve this.
- If the Grandparent account is over its target balance, excess funds can be swept to a savings account. Alternatively, excess funds can be invested, if the excess is greater than a Minimum Investment Amount.
- If the Grandparent account is below its target balance, a loan can be raised to cover the difference.

Maintenance of target balances occurs during the overnight run, using the report CASWEOD - Sweeps End of Day. This provides a summary showing what operations were carried out, an investment report showing what funds are available for investment, and a loan report showing the loans required to cover deficits. See the *Overnight Reports Guide* for more information on this report.

Negative Balance Checking

Accounts can be marked as requiring a Negative Balance Check. Any debit posting made to these accounts must be made using a Paired Transaction. When the batch is closed as reconciled, the transaction will not be posted to the account, but instead will be sent to the Pending Queue for manual authorisation or automatic release by the sleeping report RELPENDQ - Release from Pending Queue. See Paired Transactions below for more information.

Negative Balance Checking can either be performed on all debit transactions entered via the Management Services Transaction Maintenance (CATRM) or when preparing the system for the Overnight using the report EODPREP – Prepare System for Overnight.

When using Negative Balance Checking, the following blueprint parameters can be used:

- BP-NBC: This determines whether negative balance checking is applied to clean payments
- BP-NBC-GROUP: Indicates whether Negative Balance Check is to be performed on a single client account or available balance of a group of linked client accounts.

See the *Guide to Setting Up* for more information on blueprint parameters.

Paired Transactions

Paired transactions are debit or credit postings to client or general ledger accounts that have been paired with a balancing posting to a contra account. The contra account can be either a client or general ledger account.

To enter a paired transaction into the system, you must have an open batch available, and you must use the Management Services Transaction Maintenance (CATRM) screen to enter the individual transactions. For each type of paired transaction you must enter a Transaction Identifier on the Management Services Transaction Details (TRDTM) screen. On this screen you can set up the defaults and mandatory fields for each paired transaction type.

Charges are applicable to paired transactions, but are different from those for other batch posting methods. These are called Immediate Charges and are described later in this section.

You can mark some accounts as requiring a Negative Balance Check before any debit transactions can be applied to the account. If you mark an account in this way, it is forced to use paired transactions for all its debit transactions. Once the batch containing a debit paired transaction for an account has been reconciled, the transaction is moved across to the pending queue, instead of being posted to the account. The pending queue can be viewed from the Management Services Queue (BANQI) screen.

Once a paired transaction is on the pending queue, it will remain there until sufficient funds are available for it to be processed. The sleeping report RELPENDQ - Release from Pending Queue controls which transactions to process, using the following rules:

- Transactions are processed in order of their priority, defined by the Priority Queue Level on the Management Services Transaction Details (TRDTM) screen
- If more than one transaction has the same priority, then the smallest debit amount will be processed first
- You can override this process and force payment of the transaction
- You can delete the transaction

When processing a transaction, a new batch is created and immediately reconciled. This new batch will have a different number from the batch that the transaction was entered in, although the original batch number is retained.

Paired Transactions Screen Flow

The following figure shows the screens to be used when entering a paired transaction into the system, and the processing that is required before it is posted to the account.

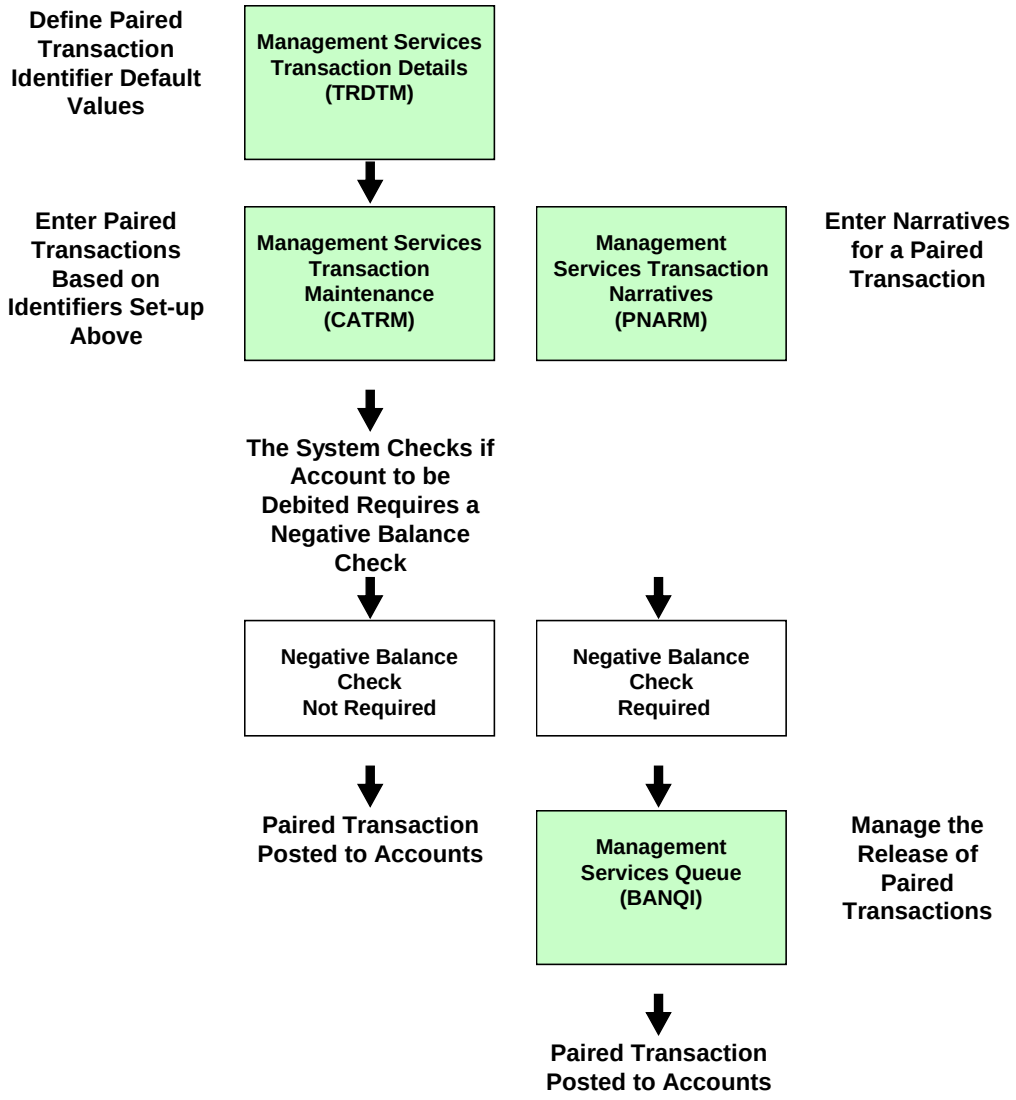

Figure C-2. Paired Transaction Processing Screen Flow

Back-valued Paired Transactions

Back-valued paired transactions can be entered into the system in the same way as normal paired transactions. The same rules apply to these back-valued transactions as apply to all back-valued postings in the system. These back-valued paired transactions can either be applied directly to the account, or placed onto the Back-valued queue for manual release. This is controlled by the blueprint parameter BP-POST-BACK-VAL, described in Blueprint Parameters in the *Guide to Setting Up*.

If you are using a Back-valued queue, you can view these transactions on the Management Services Queue (BANQI) screen. The following options are available for release of the transaction:

- You can override this process and force payment of the transaction
- You can delete the transaction
- You can process the transaction as if it were an ordinary Paired Transaction. See Paired Transactions earlier in this section for more information.

When processing a transaction, a new batch is created and immediately reconciled. This new batch will have a different number from the batch that the transaction was entered in, although the original batch number is retained.

Immediate Charges

Immediate charges are applied to paired transactions entered on the Management Services Transaction Maintenance (CATRM) screen. Before an immediate charge can be applied to a transaction, it must be set up on the Management Services Immediate Charges (CHRGM) screen.

The charge is applied immediately to the client account as the transaction is posted into the system. If the paired transaction is placed on either the Pending or Back-valued Queue, then the charge will also be placed on the Queue. If the transaction is later reversed, then the charge is also reversed.

Account Maintenance Screens

Client Account Management Services Details (CAEXM)

Use this screen to enter additional account details necessary for the maintenance of target balances using sweeping of funds, for account analysis functionality, and to specify that Negative Balance Checking is required for an account. You need only enter details on this screen if both your institution and the account are using any of these functions.

You can sweep funds between accounts in a hierarchy to help maintain target balances, and to move excess amounts into savings accounts. You must define each accounts level in the hierarchy, either Grandparent, Parent or Child. If the account is to be a grandparent, interest conditions are not applicable. For more information, see Maintaining Account Balances earlier in this section.

Account Analysis allows you to obtain reports on certain financial details of the account, including the transactions an account makes and net profit/loss. To include a transaction id in the account analysis you must include it on the Management Services Transactions for Analysis (TRCKM) record for this account.

When entering a new account, you can link to this screen from the Client Account Static Details (WACCM) screen. If you are entering details for an existing account, you can open this screen using one of the methods described in the *Starter's Guide*.

The following figure shows an example of the Client Account Management Services Details (CAEXM) screen.

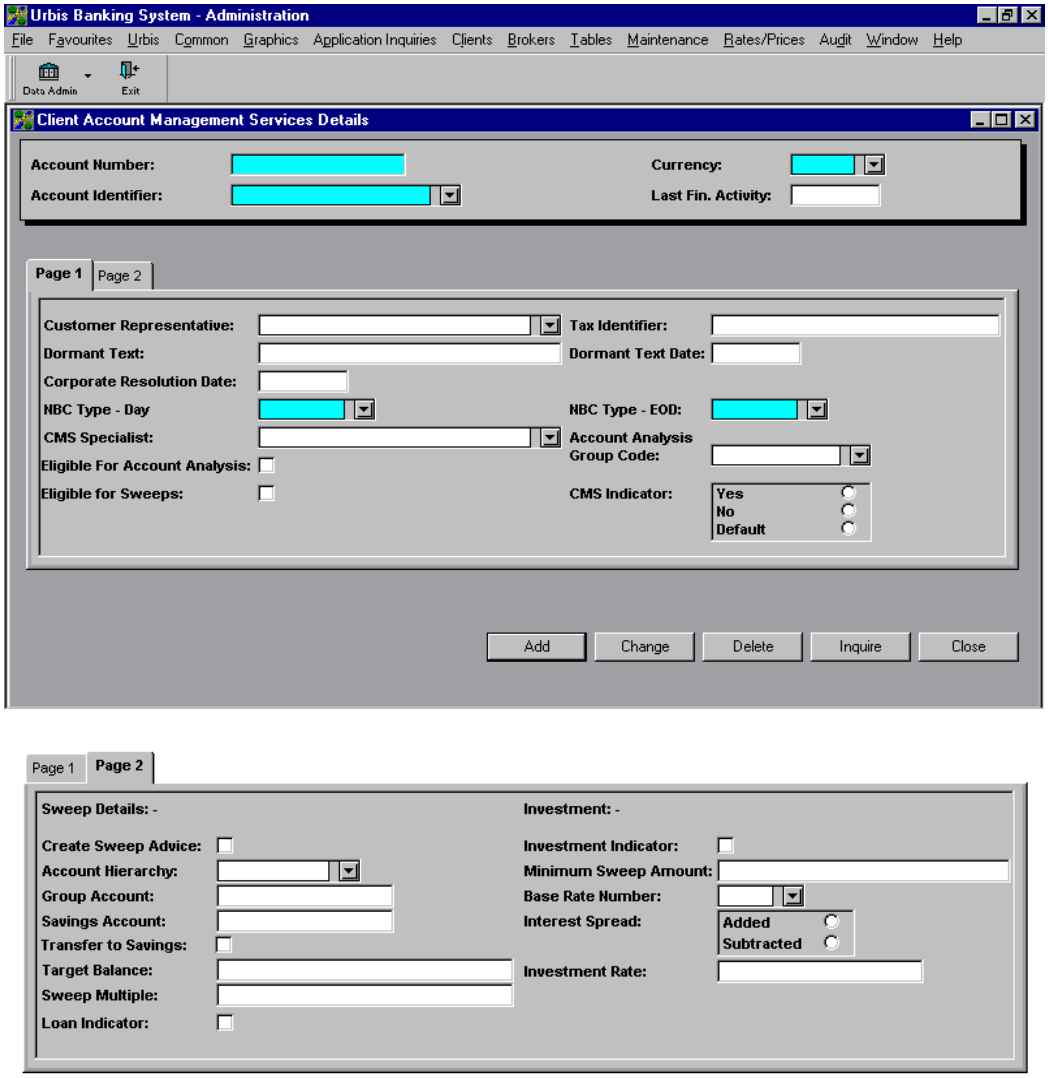

Figure C-3. Client Account Management Services Details screen

Management Services Transactions for Analysis (TRCKM)

Use this screen to record the transaction ids that are to be included in the account analysis report for this account. You can also use this screen to ente-r the charges associated with the transaction id. If inquiring on the transactions applicable to an account, use the Start Transaction Identifier field to limit the inquiry to transactions after this point. You can only reach this screen by linking to it from the Account Charges Static Details (CACHM) screen, described in Section 4 of this guide. When you link to this screen, the 'Charge Conditions', 'Accounting Centre' and 'Charge Type' fields will be pre-filled.

The Transaction Reference is a unique identifier given to each paired transaction type on the Management Services Transaction Details (TRDTM) screen. Paired Transactions are described in more detail earlier in this section.

From this screen, you can link to the following screens:

- Client Account Management Services Details (CAEXM)
- Management Services Transaction Details (TRDTM)

To link to these screens, click the **Client Account Management Details** or the **Management Transaction Details** button to go to the Client Account Management Services Details (CAEXM) or the Management Services Transaction Details (TRDTM) screen respectively.

The following figure is an example of the Management Services Transactions for Analysis (TRCKM) screen.

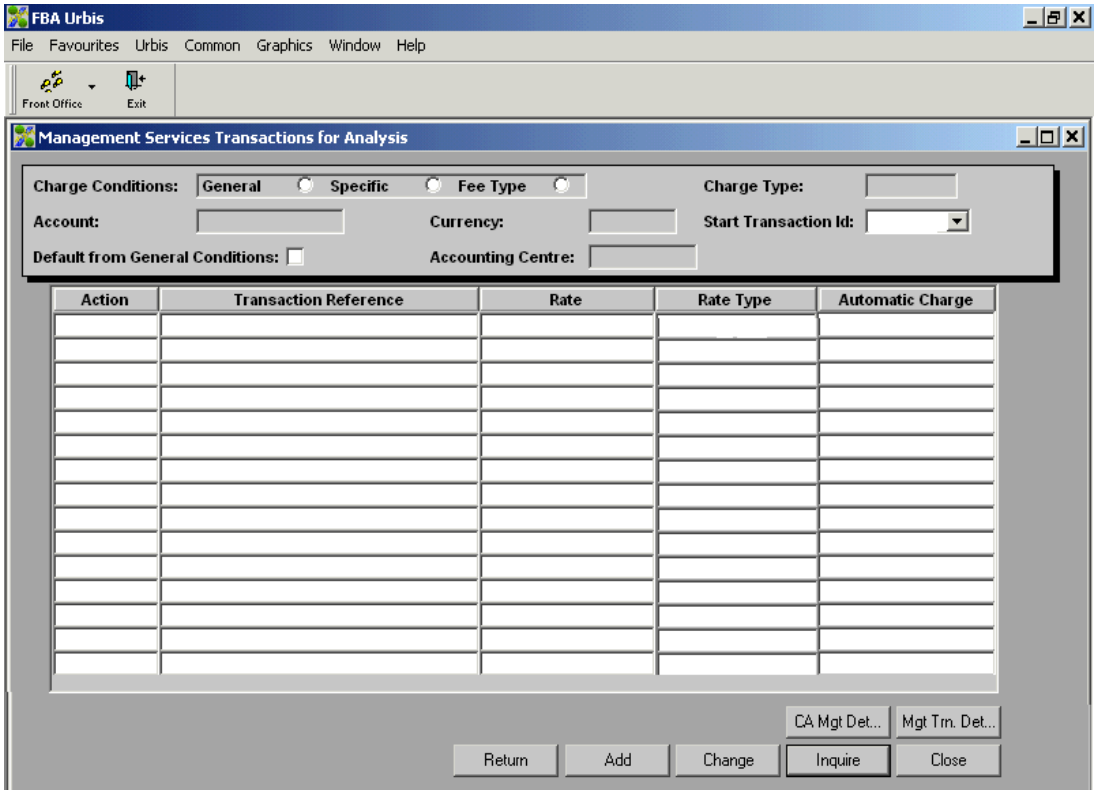

Figure C-4. Management Services Transactions for Analysis screen

Management Services Immediate Charges (CHRGM)

Use this screen to define immediate charges, which are only be applied to paired transactions. The immediate charge codes are set up using the General Purpose Narrative (GNARR) screen, table type CT (see the *Guide to Setting Up*). Paired transactions can only be entered on the Management Services Transaction Maintenance (CATRM) screen. See Immediate Charges, or Paired Transactions earlier in this section for more information.

An immediate charge can be applied to paired transactions from all accounts, or can be limited to paired transactions from one account. To limit the charge to paired transactions from one account, enter an account number in the "Account" field.

The following figure shows an example of the Management Services Immediate Charges (CHRGM) screen.

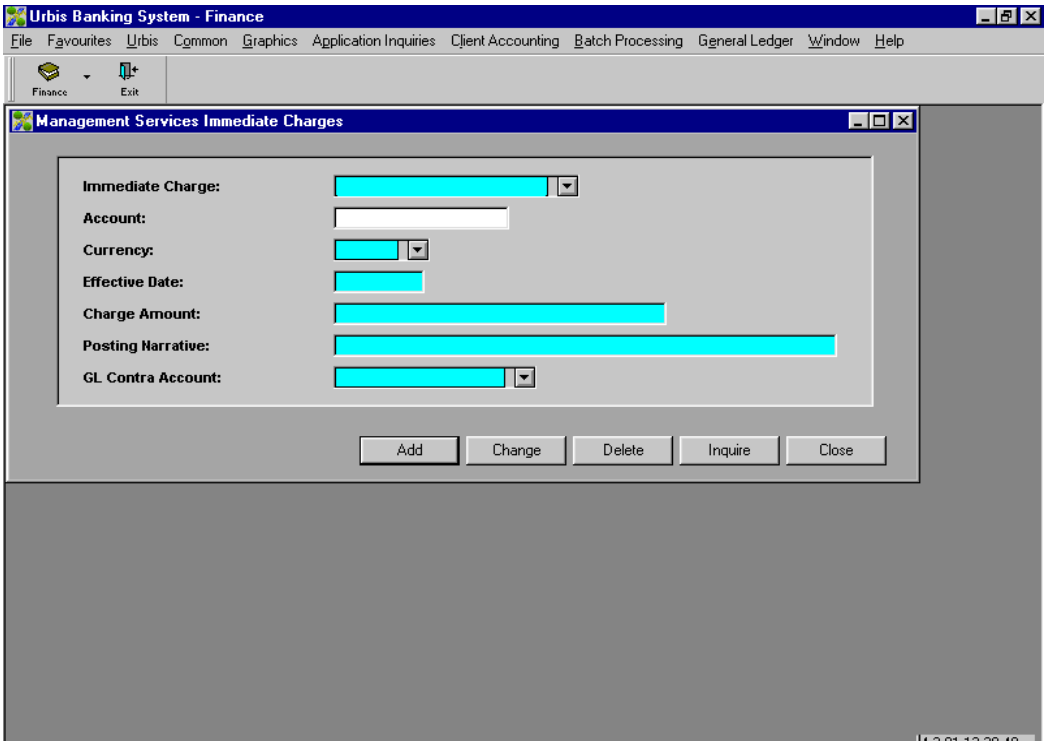

Figure C-5. Management Services Immediate Charges screen

Account Analysis GUI Screens

The following screens are only available on the Graphical User Interface (GUI). The CMS Account Analysis screen gives information useful for Maintaining Account Balances functionality, described earlier in this section. The System Monitor screen gives on-line information of system activity.

CMS Account Analysis

Use this screen to view the accounts allocated to a Client Account Management Services (CMS) Specialist, and the hierarchies associated with these accounts. Account hierarchies are used in the Maintaining Account Balances functionality, described earlier in this section. Use the Dealers and Officers (DEALR) screen to define a user as being a CMS Specialist. This screen is described in the *Core Functions and Inquiries Guide*.

Open this screen by selecting **Account Analysis** from the **Graphics** menu. A list of the CMS specialists and the number of accounts allocated to them is then displayed. By selecting one of the CMS specialists, you can view the account hierarchies allocated to them, starting with the Grandparent accounts.

The following screen shows an example of the CMS Account Analysis screen:

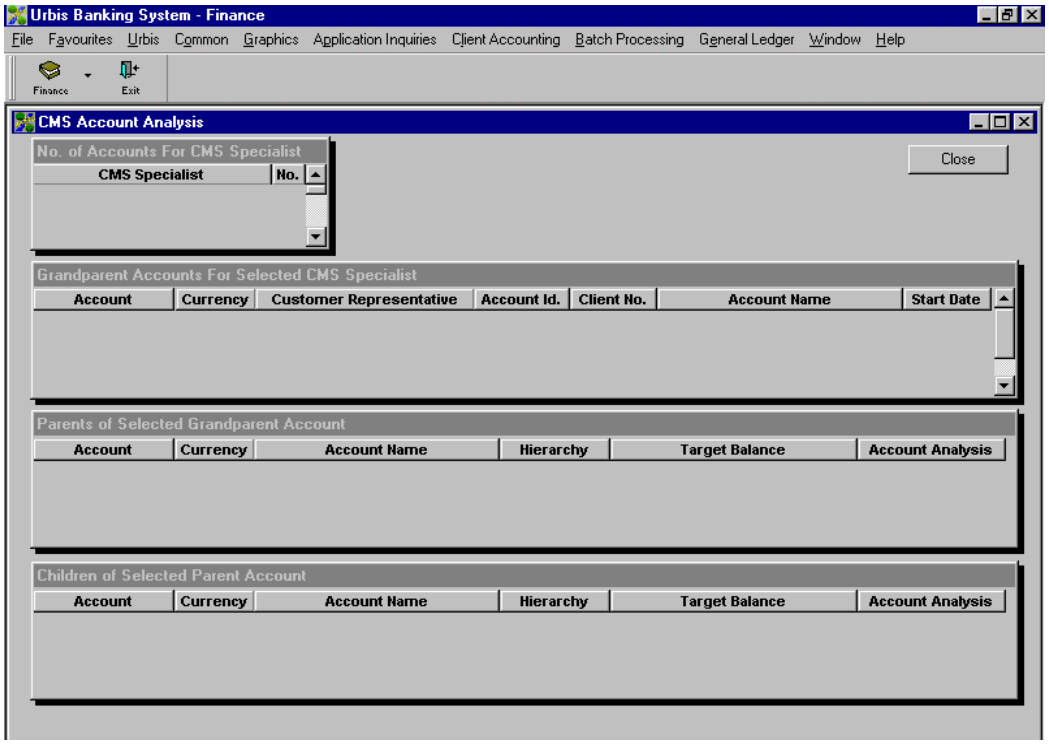

Figure C-6. CMS Account Analysis screen

System Monitor

Use this screen to monitor online various activities in the system. The following are relevant to Clients and Accounts:

- Batches and Payments - This displays the number of batches that are not closed as reconciled
- Sweeps - This displays the number of sweeps that have yet to be processed by a CMS Specialist. See Maintaining Account Balances earlier in this section for more information
- Overdraft Totals - This displays the total number of accounts with negative balances in each accounting centre

Other displays show:

- Reports Running - This displays a list of the reports running in the system
- Inbound Interface Rejects Today - This displays the number of rejects for each type of Client Account Management Services Interface, see the *Guide to Interfaces with External System* for more information
- Upload Results - This displays the number of transactions that have been downloaded from the system, and the number of transaction waiting to be downloaded, to the IBOS General Ledger Extract Interface, described in the *Guide to Interfaces with External Systems*

The following figure is an example of the System Monitor screen:

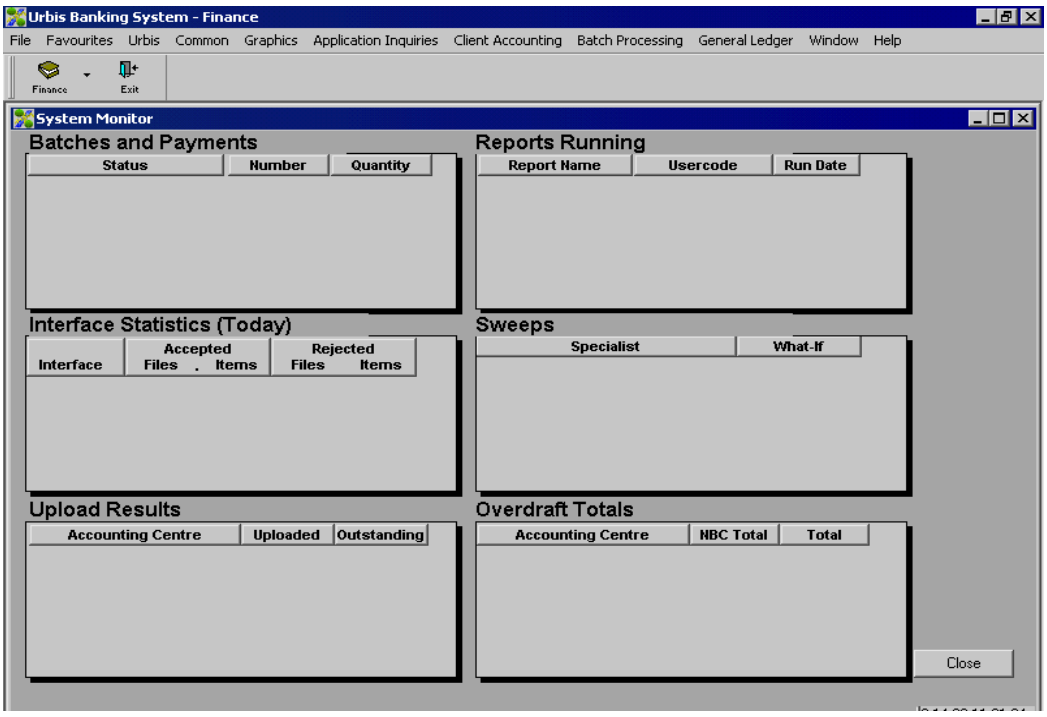

Figure C-7. System Monitor screen

Paired Transactions Screens

Management Services Transaction Maintenance (CATRM)

Use this screen to enter paired transactions into the system. A paired transaction is a debit or credit transaction, and a balancing entry to a contra account. These paired transactions can be either a client account debit, a debit cheque, a debit control, a client account credit, or a credit control. Before entering transactions of any type, you must set up the transaction type and its defaults on the Management Services Transaction Details (TRTDM) screen. Before using this screen, you must open a batch on the Batch Header (BHEAD) screen.

If the Contra Account is a General Ledger account it is possible to enter the Accounting Centre for the contra posting. This may be different from the Accounting Centre of the Client Account and if so Cross Accounting Centre postings will be generated using standard Cross Accounting Centre rules.

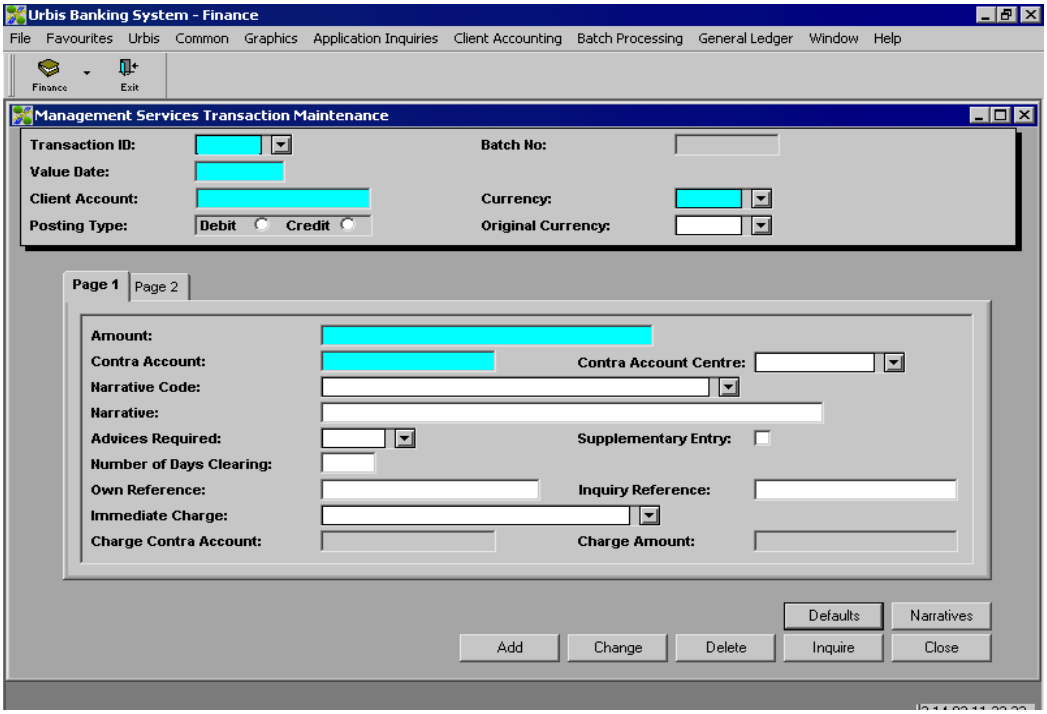

Paired transactions use a different charging method than other batch postings. These are called Immediate Charges and are described earlier in this section. To enter an immediate charge for the transaction, you must enter the Immediate Charge Code, set up on the Management Services Immediate Charges (CHRGM) screen.

When entering a paired transaction you must enter either a narrative, narrative code, or link to the Management Services Transaction Narrative (PNARM) screen to enter multiple narratives.

To link to the Management Services Transaction Details (TRDTM) screen, click the **Defaults** button.

To link to the Management Services Transaction narratives (PNARM) screen, click the **Narratives** button.

The following figure shows an example of the Management Services Transaction Maintenance (CATRM) screen.

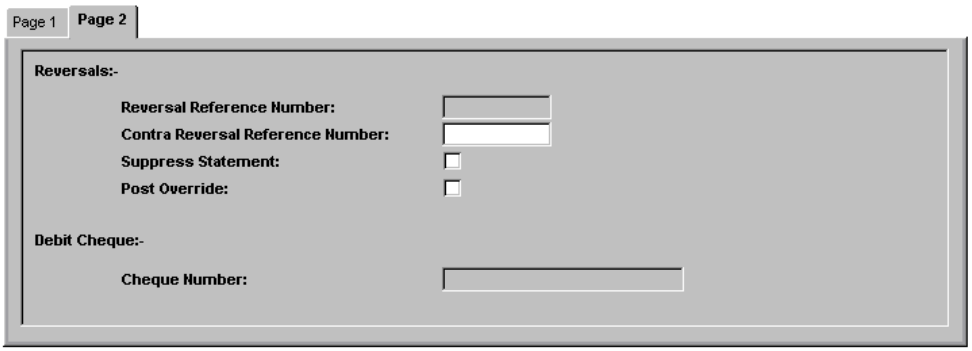

Figure C-8. Management Services Transaction Maintenance screen

Management Services Transaction Narratives (PNARM)

Use this screen to enter multiple narratives for a paired transaction. You can enter this screen from the Management Services Transaction Maintenance (CATRM) to enter and change narratives and from the Management Services Transaction Inquiry (POPTI) screen to inquire on narratives.

For each transaction type there are mandatory narratives that must be entered, and non-mandatory narratives that contain additional information. These narratives are defined on the Management Services Transaction Details (TRDTM) screen, where you must define a Prompt Narrative to describe the details to be entered in the narrative.

Adding Narratives

To complete the details on this screen, you must complete all mandatory narratives and any other narratives that are relevant to this transaction. The narrative prompts describe what information is necessary. On each narrative line to be entered, enter all narrative information, enter 'Add' in the 'Action' field adjacent to the new information. Click the **Add** button.

You can now return to the Management Services Transaction Maintenance (CATRM) screen to enter further transactions. To do this, click the **Complete** button.

Changing Narratives

If after the transaction has been successfully entered into the system you want to change any of the narratives, you can return to this screen and perform the following functions:

To add new narrative information, enter the narrative information, enter 'Add' in the 'Action' field adjacent to the new information and click the **Change** button.

To change a narrative line, change the information of a narrative line. Enter 'Change' in the 'Action' field adjacent to the changed information and click the **Change** button

To delete a narrative line, enter 'Delete' in the 'Action' field adjacent to the information you want to delete and click the **Change** button.

The following figure is an example of the Management Services Transaction Narratives (PNARM) screen.

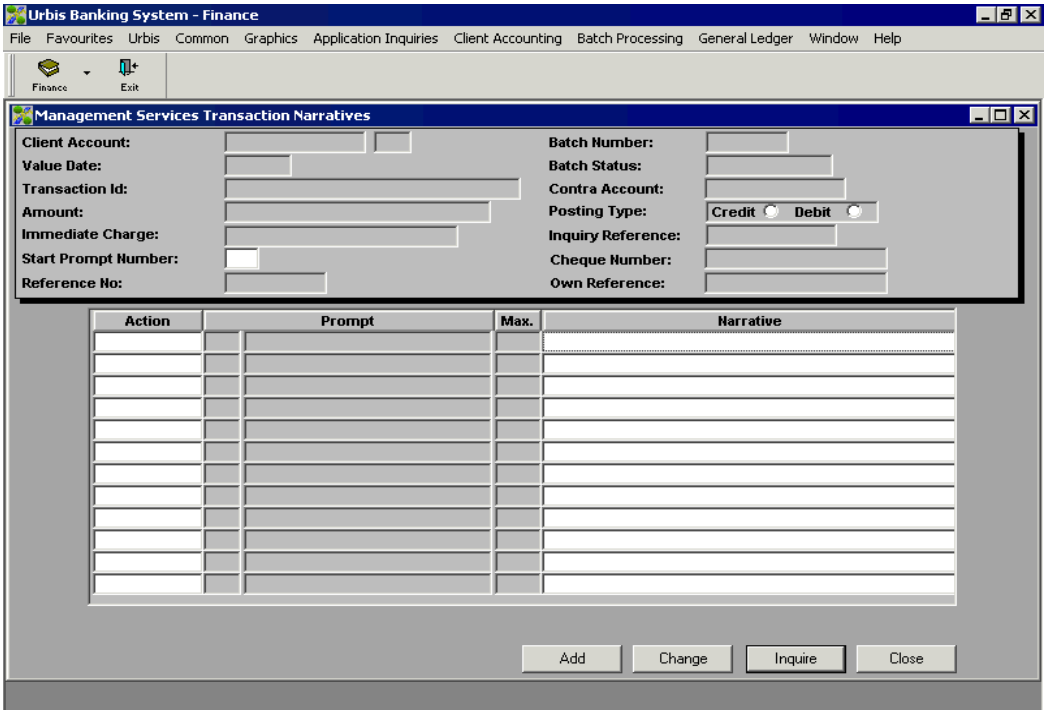

Figure C-9. Management Services Transaction Narratives screen

Management Services Transaction Details (TRDTM)

Use this screen to define the paired transactions allowable in the system. On this screen you must enter the Transaction Identifier, which is then used on the Management Services Transaction Maintenance (CATRM) screen to identify the transaction type.

You can define which prompts are mandatory for that transaction identifier by adding Narrative Prompts. When you create a new transaction using this identifier, these prompts must be completed for that transaction.

The following figure is an example of the Management Services Transaction Details (TRDTM) screen.

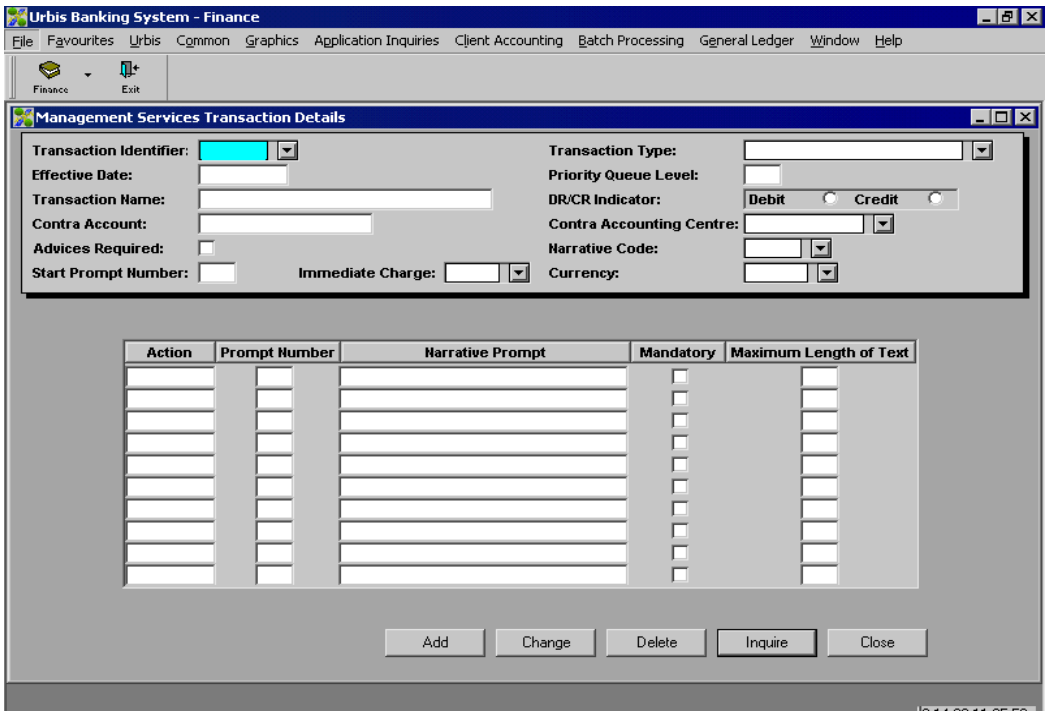

Figure C-10. Management Services Transaction Details

Management Services Queue (BANQI)

Use this screen to view the Pending and Back-value authorisation queues that contain paired transactions that have been removed from a batch. These queues contain paired transactions that require a negative balance check, or are back-valued respectively. This screen can also be used to view the Pending Queue for charges that require a negative balance check (see Charges in Account Analysis).

Paired transactions that require a negative balance check are moved to this queue after the batch they are entered in is closed. See Paired Transactions earlier in this section for more information. They can be released from this queue in the following ways:

- Automatic release via the sleeping report RELPENDQ - Release from Pending Queue. The transaction will remain on the queue until sufficient funds are available. Transactions to the same account are processed in order of their priority. When two transactions have the same priority, the one with least amount is processed first.
- Manual release can be forced on a transaction, even if the amount will take an account into overdraft.
- Deleting a transaction will reverse both the amount of the transaction, and any charges made

Back-valued Paired Transactions are always sent to this queue for authorisation. You can remove a back-valued paired transaction in the following ways:

- Ordinary release will apply the paired transaction to the relevant accounts. If the paired transaction contains a debit to an account that requires negative balance checking, it will be moved to the Pending Queue and processed as above
- Manual release can be forced on a transaction, even if the amount will take an account into overdraft.
- Deleting a transaction will reverse both the amount of the transaction, and any charges made
- There is no automatic release from the Back-value Queue

You can change the way that individual paired transactions are removed from the queue they are on. To do this, select the method for processing in the 'Action' field adjacent to the transaction you want to change, and press the **Change** button.

Charges that require a negative balance check are moved to this queue when they are generated by the CAACANAL - Account Analysis Statement report. They can be released from this queue in the following ways:

- Automatic release via the sleeping report RELPENDQ - Release from Pending Queue. The charge will remain on the queue until sufficient funds are available
- Manual release can be forced on a charge, even if the amount will take an account into overdraft
- Deleting a charge will change the charge amount to zero and it will not be posted

From the Management Services Queue (BANQI) screen, you can link to the Client Account Inquiry (CAACI) screen. To do this, highlight a batch and click the **A/C Details** button.

This screen is used for releasing or deleting transactions, which were originally backdated or require negative value checking before being posted. The batch close screen creates the batch posting record in BCHPO.

The following figure is an example of the Management Services Queue (BANQI) screen.

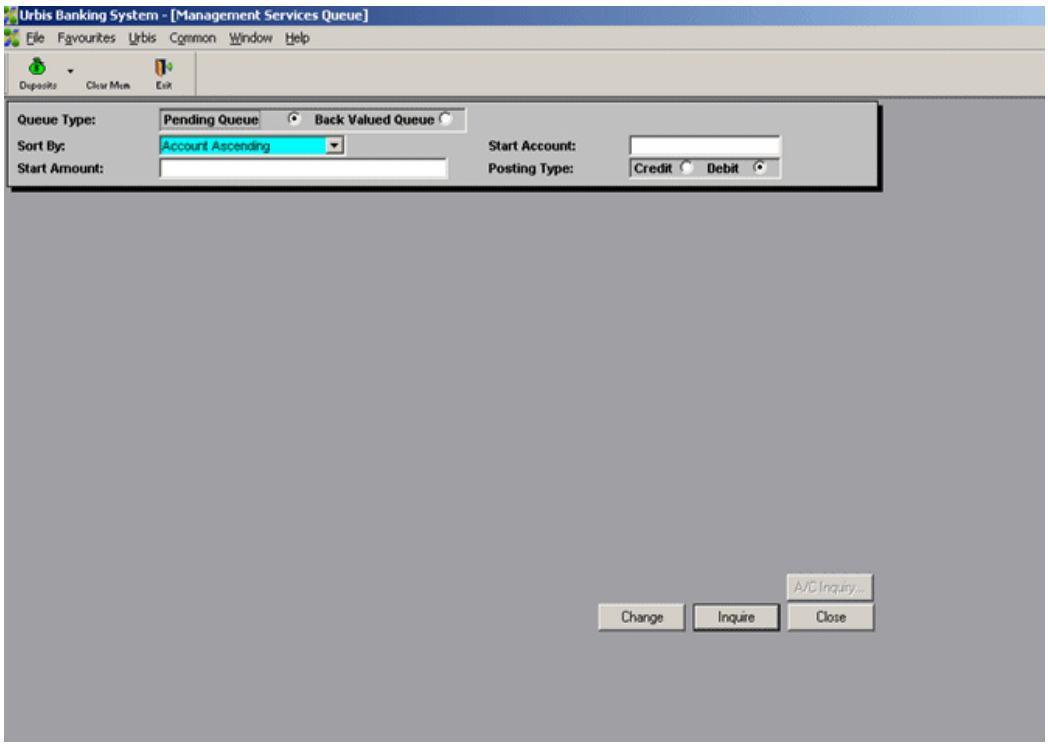

Figure C-11. Management Services Queue screen

Management Services Transaction Inquiry (POPTI)

Use this screen to view the paired transactions posted to an account, and the narratives that accompany them. If a transaction has extra narratives related to it, you can view these by linking to the Management Services Transaction Narratives (PNARM) screen. To do this, highlight the transaction on which you want further details and click the **Details** button.

The following figure is an example of the Management Services Transaction Inquiry (POPTI) screen.
