About This Guide

Purpose

This guide describes the core on demand reports supplied with the Unisys e-@ction Banking Back-Office Processing product.

The information contained in this guide is also available as online help.

Scope

This Reports Guide explains how to run reports on-demand and describes the core on-demand reports that are common to both non-retail and retail systems.

Audience

This guide is for all personnel who are involved with the set up and running of the reports. The report descriptions will also assist personnel that are involved in utilising the output produced by the reports.

Prerequisites

Any person using this guide should be familiar with the user documentation and have read the *Starter's Guide* or the *Starter's Guide to Retail, which* provide instruction in the use of the screens.

How To Use This Guide

Read Section 1 of this guide before attempting to run a report. Use Sections 2 to 4 and the *Overnight Reports Guide* for information concerning particular reports or utilities, and Section 5 for a description of the fields on screens in this guide.

About Urbis

The usage of the product name Urbis is due to be phased out as part of the Unisys re-branding exercise. The replacement will be the generic term "Banking Back-Office Processing" solution or "Banking Back-Office" for short. To provide continuity with existing product documentation, the name Urbis is used within this document, but is synonymous with Banking Back-Office Processing.

Organisation

This document consists of five sections and one appendix.

Section 1: How to Run Report Programs

This section gives an introduction to the types of report supplied with this system. It also gives illustrations of the screens used for running reports on demand.

Section 2. Core On Demand Management Reports

This section describes the core management reports that are run on demand. The reports are given in alphabetical order by report mnemonic.

Section 3. Core On Demand Housekeeping Reports

This section describes the housekeeping reports that are relevant to both non-retail and retail systems. The reports are given in alphabetical order by report mnemonic.

Section 4. Core On Demand Processing Reports

This section describes the core processing reports that are normally run on demand and not during the Overnight processing. The reports are given in alphabetical order by report mnemonic.

Section 5. Definition of Screen Field Names

This section defines all the field names found on the screens described in Sections 1. The field names are listed in alphabetical order.

Appendix A. Reports Supplied

This appendix lists all the reports that can be supplied with the system. This list includes both overnight and on demand reports. The list indicates the document in which a full description of the report can be found. A second table lists the utilities available with the system.

Related Product Information

Guides Common to all Users of the System

Product Overview (3937 0234)

This document describes the capabilities and benefits of the modules of the Banking Back-Office Processing system. It consists of an overview of the system, and a description of each of the modules and interfaces available. It is intended for use by senior management.

General Ledger Administration Guide (3937 0457)

This guide describes the data entry screens associated with General Ledger transactions. This should be used by personnel preparing information for data entry.

Overnight Reports (3937 0861)

This guide describes how to run offline reports. This includes an overview of overnight processing. Instructions on how to initiate reports are given. This guide should be used by all personnel who need to understand the reports and the overnight process.

Data Dictionary (3937 0226)

This document provides details of data fields within every dataset on your banking systems database. This document should be used by staff preparing the accounting models and writing SQL reports to inquire on the database.

Guides for Users of the Wholesale System Only

Operations Reference Card (3937 0986)

This document is a single card that provides a list of screen names and their mnemonics. The list is organised according to the menu structure of the Graphical User Interface. The card also describes how to log on and off the system, enter data, make inquiries and print reports. These instructions are relevant to the Graphical User Interface only.

Starter's Guide (3937 0531)

This guide describes how to enter data and make online inquiries. It also includes a description and example of commonly used data entry and inquiry screens. This guide is intended for all new and inexperienced personnel who need to enter data and make inquiries.

Guide to Setting Up (3937 0945)

This guide describes how to set up parameters that govern the operating environment of the system. It describes the procedures for setting up the business and operational tables, and setting up usercodes and access security. The procedures for setting up blueprint parameters are provided with a description of each parameter. It should be used by all persons involved in installation, implementation and maintenance of these system parameters.

Core Functions and Inquiries Guide (3937 0952)

This guide describes the kernel functions that are used regularly for the maintenance of information utilised by a number of modules. It describes the procedures for setting up and maintaining data, such as market rates and dealers. It also describes inquiries that are common to all contracts. This guide is relevant to all users.

Clients and Accounts Administration Guide (3937 0960)

This guide describes the data entry and inquiry screens associated with setting up and maintaining client details. This guide also describes the set up and maintenance of client accounts, including automatic payments (standing orders). An appendix covers the calculations used by client accounts. This should be used by personnel preparing information for data entry.

Settlements Guide (3937 0366)

This guide describes the processes associated with settlements and customer transfers. It details how to administer the settlement queues. This guide also describes how to use the Straight Through Processing and Netting functions. It should be used by personnel managing the settlements department.

Risk Management Administration Guide (3937 0358)

This guide describes the data entry screens associated with setting up limits and exposures. The guide also describes the screens associated with portfolios. The amounts that represent book and market values are listed by module in an appendix. This guide is intended for personnel preparing information for data entry and those concerned with controlling risk.

Commercial Loans Administration Guide (3937 0150)

This guide describes the data entry screens associated with Commercial Loan transactions. This includes entry of commitments, various types of drawdown and contract schedules. An appendix gives the calculations used in the processing of Commercial Loan transactions. This guide is intended for personnel preparing information for data entry.

Foreign Exchange and Money Market Administration Guide (3937 0135)

This guide describes the data entry screens associated with Foreign Exchange and Money Market transactions. An appendix gives the calculations used in the processing of Foreign Exchange and

Money Market transactions. This guide is intended for personnel preparing information for data entry.

Forward Rate Agreements and Interest Rate Swaps Administration Guide (3937 0168)

This guide describes the data entry screens and some related inquiries associated with Forward Rate Agreement and Interest Rate Swaps transactions. An appendix gives the calculations used in the processing of Forward Rate Agreement and Interest Rate Swap transactions. This guide is intended for personnel preparing information for data entry.

Futures Administration Guide (3937 0176)

This guide describes the data entry screens associated with Futures transactions and some related inquiries. An appendix gives the calculations used in the processing of Futures transactions. This guide is intended for personnel preparing information for data entry.

Traded Options Administration Guide (3937 0184)

This guide describes the data entry screens associated with Exchange-Traded Options transactions. An appendix gives the calculations used in the processing of Options transactions. This guide is intended for personnel preparing information for data entry.

OTC Options Administration Guide (3937 1034)

This guide describes the data entry screens associated with OTC Options transactions. An appendix gives the calculations used in the processing of OTC Options transactions. This guide is intended for personnel preparing information for data entry.

Securities Administration Guide (3937 0341)

This guide describes the data entry screens associated with Interest Bearing Securities, Discounted Securities and Repurchase Agreements transactions and some related inquiries. An appendix gives the calculations used in the processing of Securities transactions. This guide is intended for personnel preparing information for data entry.

Trade Finance Administration Guide (3937 0119)

This guide describes the data entry screens used by the Trade Finance department. This guide is intended for personnel preparing information for data entry.

Generalised Fees Administration Guide (3937 0374)

This guide describes the data entry screens associated with Fee transactions and supporting business table. This guide is intended for personnel preparing information for data entry.

On-Demand Reports Guide (3937 0937)

This guide describes on-demand reports in alphabetical order. Any options available when producing a report are detailed as well as any specific calculations. Note: core reports are described in the Core On-Demand Reports Guide; retail reports are described in the Retail On-Demand Reports Guide.

Guide to Interfaces with External Systems (3937 0911)

This guide describes the running of all the interfaces between your Banking Back-Office system and external systems. This guide is intended for personnel involved in setting up and running external interfaces.

Order Transport Management System (3937 1018)

This guide describes how to enter stock exchange securities contracts using the Order Transport and Management System. The screens in this guide allow users to add, maintain and inquire on deals, convert deals into stock exchange securities contracts, and liaise with brokers to complete settlement of a deal. This guide is intended for personnel preparing information for data entry.

Portfolio Management (3937 1026)

This guide describes how to create portfolios for the clients and agents who will be trading stock exchange securities with your institution. A large array of inquiry screens for managing these portfolios is also described. This guide is intended for personnel preparing information for data entry.

Stock Exchange and Securities Management (3937 1000)

This guide describes how to set up and maintain the securities master file, allowing you to record details of stock exchange securities. This guide also describes how to create, maintain and inquire on contracts based on stock exchange securities, including the necessary static data.

Loan Administration System Guide (3937 0994)

This guide describes the data entry screens associated with Syndicated Loans. It includes entry of facilities, and contracts such as drawdowns, guarantees and acceptances and their schedules. The screens in this guide allow users to enter data using workflows. This guide is intended for personnel preparing information for data entry.

Static Database Transaction Input Guide (3937 0093)

This guide, in conjunction with the static database, enables users to evaluate the functions and features of many of the modules. It should be used by persons who are familiarising themselves with the systems functionality.

Guides for Users of the Retail System Only

Retail Operations Reference Card (3937 0929)

This document is a single card that provides a list of screen names and their mnemonics. The list is organised according to the menu structure of the Graphical User Interface. The card also describes how to log on and off, enter data, make inquiries and print reports.

Starter's Guide to Retail (3937 0903)

This guide describes how to enter data and make online inquiries. It includes a description and example of commonly used data entry and inquiry screens. It also describes how to add a client and use a workflow with examples. This guide is intended for all new and inexperienced personnel who need to enter data and make inquiries.

Core Retail Functions and Inquiries Guide (3937 0887)

This guide describes the kernel functions that are used regularly for the maintenance of information utilised by a number of modules. It describes the procedures for setting up and maintaining data, such as exchange rates. It should be used by all users.

Guide to Setting Up the Retail System (3937 0879)

This guide describes how to set up parameters which govern the environment in which the system operates. It describes the procedures for setting up the business and operational tables, blueprint parameters, and setting up usercodes and access security. It should be used by all persons involved in installing, implementing and maintaining the system.

Retail Lending Administration Guide (3937 0390)

This guide is only relevant to the retail loans module. It describes how to set up and maintain retail loan product templates. It also details the screens needed to enter an application for a loan and administer any loan granted as a result of an application. The screens used to record details of collateral used to back a loan are also described. An appendix gives the calculations used by retail loans. This guide should be used by personnel involved in loan administration.

Retail Clients and Accounts Administration Guide (3937 0895)

This guide describes the data entry and inquiry screens associated with setting up and maintaining client details. This guide also describes the set up and maintenance of client accounts, client account templates and automatic payments, such as standing orders. An appendix covers the calculations used by client accounts. This should be used by personnel preparing information for data entry.

Arrears Management Administration Guide (3937 0978)

This guide describes the data entry screens associated with the Arrears Management functionality. This allows the user to recognise when an account is in arrears, create an arrears case, and manage the arrears case.

Financial Transactions Reference Guide (3937 0408)

This guide is only relevant to the retail payments module. It describes the screens used to capture data from a retail delivery system. Also covered are the back office batch entry screens and how to set up accounting centre accounts and suspense accounts. This guide should be used by personnel who need to identify the data items that are captured by financial transactions and for those preparing information for data entry.

Retail On-Demand Reports Guide (3937 0846)

This guide describes retail on-demand reports in alphabetical order. Any options available when producing a report are detailed as well as any specific calculations.

Section 1
How To Run Report Programs

Introduction

The system contains two types of report:

- Control reports that will only be run offline. These reports are normally your key processing reports that must only be run under close control. These reports are run at pre-defined frequencies and are activated automatically as part of the overnight processing procedure. Information on the reports designed for use as Control Reports is provided in the *Overnight Reports Guide*.
- On-Demand reports that can be run online or offline. If an On-Demand report is run online, then it is run once for each demand. If an On-Demand report is run offline, then it is run at a pre-defined frequency and is activated automatically as part of the overnight processing procedure. Information on the reports designed for use as On-Demand Reports are provided in the *Retail On-Demand Reports Guide* and *On-Demand Reports Guide*. This document provides information on the Core On-Demand Reports which are common to both non-retail and retail.

***Note**:* *There is a special type of On-Demand report, a 'Sleeping Report', that runs continuously during the online day. Depending on the Blueprint parameters set, these reports are started when the system is initiated each day; they automatically process in the background as data becomes available.*

Reports are set up as 'Control' or 'On-Demand' on the Reports Maintenance (REPS) screen, if you are using the non-retail system (see the *Guide to Setting Up).*

Reports are set up as 'Control' or 'On-Demand' on the Reports Maintenance (REPS) screen for the retail system as well (see the *Guide to Setting Up the Retail System*).

Control Reports

There are two major types of Control Report:

- **End-of-day Reports**
  These reports must be run as Control Reports when all input for the day is complete. They carry out calculations and accruals based on end-of-day positions.
- **Beginning of Day Reports**
  These reports must be run as Control Reports after the end-of-day reports, and after any On-Demand reports which record positions at close of business. They process transactions which are due to come to value on the new working day.

On-Demand Reports

The major types of On-Demand Report are:

- **Sleeping Reports**
  These reports are started when the system is initiated each day; they automatically process in the background as data becomes available. Sleeping reports should be stopped using the :STR command before overnight processing is initiated. If a report can be run as a sleeping report, this is stated in the report description. If a report is to be run as a sleeping report, then this is achieved either using Blueprint Parameters if you are using the non-retail system (see the *Guide to Setting Up* for more information) or Retail Blueprint Parameters if you are in the retail system (see the *Guide to Setting Up the Retail System* for more information) or by setting a report option as described in this guide
- **Housekeeping Reports**
  These reports delete historical or redundant data. They can be run during the online day but users are advised to run them outside working hours in order to maximise the efficiency of system performance.
- **Management Reports**
  These reports are designed to provide printed output; they do not update the database. They can be run during the online day or during the Overnight process without affecting the availability of records or files within the database.

Introduction to Online Running

Reports are run using a series of screens. These screens are used to select the report you want to print and to enter any report options. Information on the screens designed for use with the offline reports is provided in the *Overnight Reports Guide*.

Refer to the *Starter's Guide* or the *Starter's Guide to Retail* for information about how to access and use screens.

The screens used to support the online running of reports are:

- Report Run Parameters (RPMTR) screen
- Run Time Options (RTOPS) screen

These screens are described in this section, for each screen, the following information is given:

- The title and mnemonic of the screen used
- Instructions on how to complete the screen
- An example of the screen
- A definition of the fields used

To list reports available to you, with details of report options, run REPSLST - Reports List.

Running Reports Online

You can initiate a report by following the steps mentioned below:

Step 1 On the Report Run Parameters (RPMTR) screen, select a report group, a report name and enter run parameters. You will be routed to the Run Time Options (RTOPS) screen.

Step 2 On the Run Time Options (RTOPS) screen, select the necessary options to run the report.

***Note**: Reports cannot be run online while an Overnight is being run.*

Report Run Parameters (RPMTR)

Reports are run online by completing the Report Run Parameters (RPMTR) screen. Select the group to which the report belongs to from the list of options available in the Report Group dropdown list. Next, select the name of the report that needs to be run from the Report Name dropdown list. Alternatively, you can select the report name directly without selecting the report group.

You run a report as follows:

 Complete the fields on the Report Run Parameters (RPMTR) screen and click **OK**

T Complete the fields on the Report Run Parameters (RPMTR) screen and press **Transmit**

If the report contains options, the Run Time Options (RTOPS) screen is displayed automatically. If you want to use a report's defaults for the options, you can avoid the Run Time Options (RTOPS) screen by:

 Switching on the Option Override

T Entering "Y" in the Option Override field

The report will run and you will be returned to the blank Report Run Parameters (RPMTR) screen.

Printing of the report output is dependent upon your system configuration. However, it is normal to use the Line Printer (LP) or Terminal Printer (TP) parameter with either:

- The Printer Identifier specified to direct the output to the correct printer, or
- A utility, such as the Report Output Explorer, being used to view the output and, if required, directing it to the correct printer.

The following figure shows an example of the Report Run Parameters (RPMTR) screen.

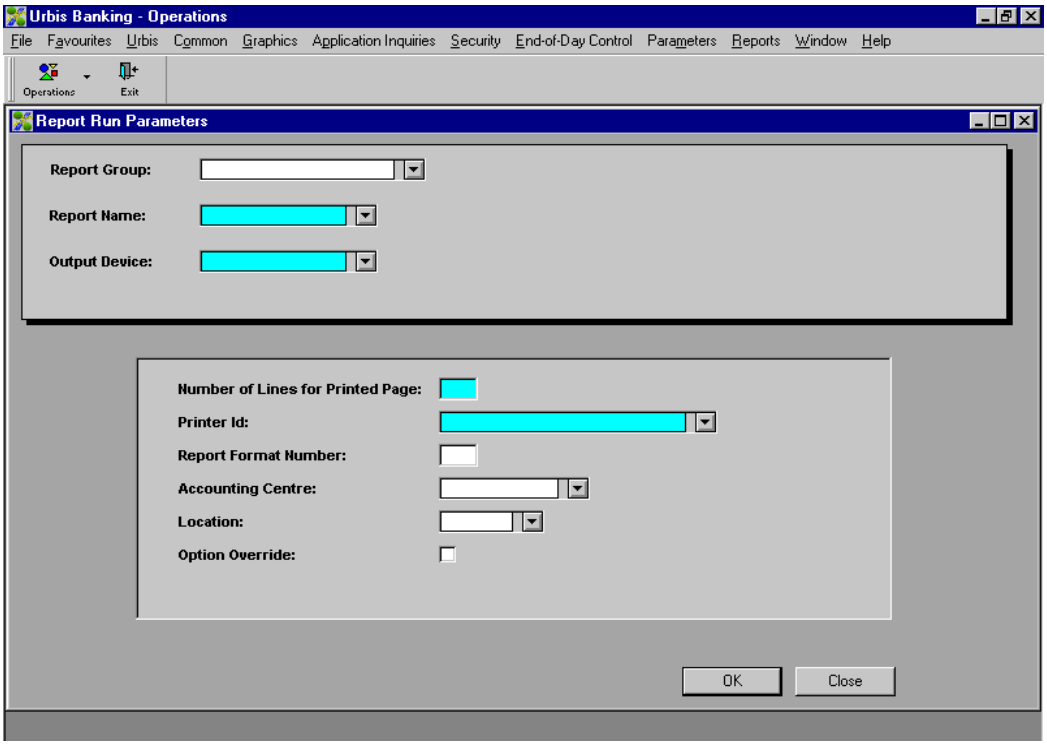

Figure 1–1. Report Run Parameters screen

Run Time Options (RTOPS)

When you run a report that has options, the Run Time Options (RTOPS) screen is displayed. This screen lists the options available with the report.

The options that are available with a report are set up on the Report Options Details (RPOPM) screen (see the *Guide to Setting Up* or the *Guide to Setting Up the Retail System*). Each option may be one of the following types:

ALP	Alphabetic characters
ARC	Area Code
CAA	Client Account Number (in the format Account-Number@Currency)
CCY	Currency mnemonic
CRY	Country mnemonic
DAT	Date (the date is entered in the format defined using Blueprint Parameter BP-DATE see the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for details)
ERG	Exchange Rate Group
GLA	General Ledger Account Number
GLK	General Ledger Account Key (in the format Accounting Centre@Account Number@Currency)
NUM	Numeric characters
SEC	Sector Code (part of the accounting centre)
SNC	Shortname/city combination (in the format Client Shortname@City)
SSC	Sub-Sector Code (part of the accounting centre)

Where applicable, report options are listed with their option types for the reports described in Sections 2 to 4.

***Note**: For ease of entry, an option can consist of more than one parameter, such as accounting centre, account number and currency. In these cases, you indicate the end of a parameter by entering @: therefore the example would be entered in the form accounting centre@account number@currency. However, if **all** the parameters have their maximum length, the @ delimiters must not be entered.*

For some reports, the options are listed on more than one screen. To see the options on the next screen:

 Switch on the **More Options Required** and click **OK**

T Enter “Y” in the “More Options Required” field and press **Transmit**

The next screen of options is then displayed.

An “Option Prompt” displays the options available. Select the option you require by entering its details in the “Option” field adjacent to the appropriate “Option Prompt”.

When all the options have been entered:

Click **OK**

T Press **Transmit**

The system attempts to initiate the report and you are returned to the Report Run Parameters (RPMTR) screen.

Before you initiate the report, you can abort the report request:

Switch on “Cancel Report Request” and click **OK**

T Enter “Y” in the “Cancel Report Request” field and press **Transmit**

The following figure shows an example of the Run Time Options screen.

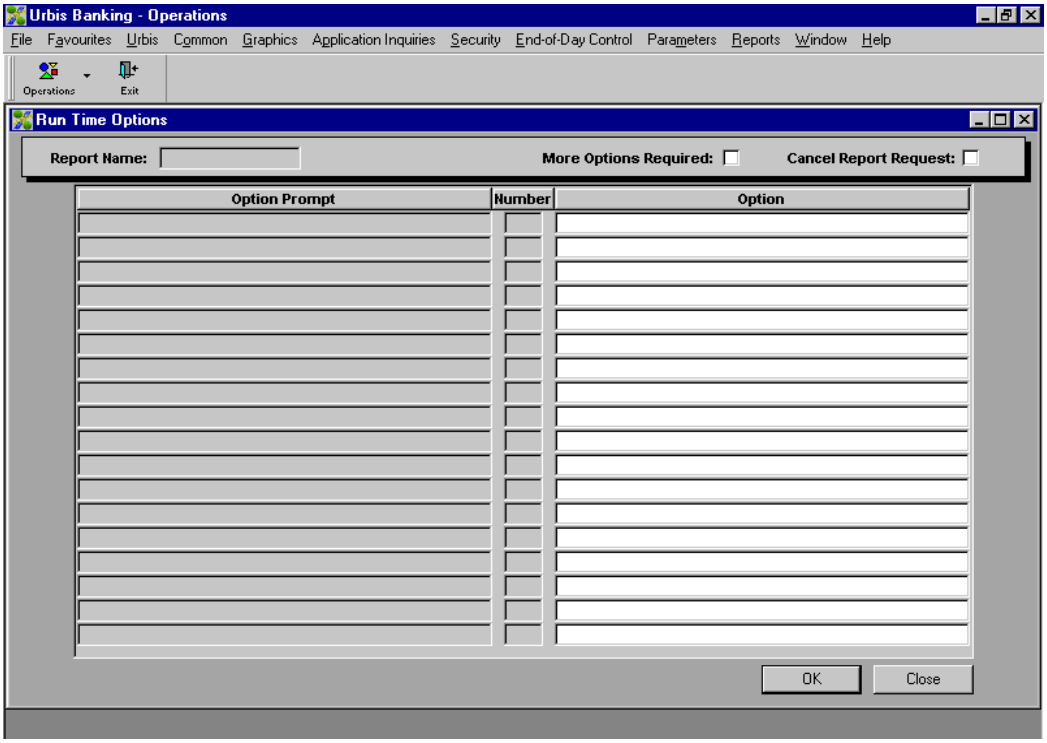

Figure 1–2. Run Time Options screen

Report Output Explorer

Reports initiated using the Report Run Parameters (RPMTR) screen, are stored in a temporary directory and can be accessed and viewed using Report Output Explorer. Report Output Explorer displays the user name, the report name, the date and time the report was initiated and in functionality, is similar to Microsoft Windows Explorer.

Reports initiated by the user are stored in a LINC System directory. The LINC System directory is located on the local server. To view the Report files successfully using Report Output Explorer, the linkage program you are using, such as a Network File Server (NFS) must be installed on the viewing PC and on the Unix Server. Many companies produce versions of this software, such as Omni who produce a NFS Client program.

To configure NFS to your system, install NFS on the Unix Server and your PC and link NFS to the directory on the Unix server containing the report files. Do this by following the instructions accompanying your NFS program.

When you want to view a report, you must open the Report Output Explorer and specify the link created above. To initiate Report Output Explorer, select **Report Output Explorer** from the **Common** menu on the **Operations** MenuBar.

To view and access the reports, you have to configure the path for the files on the ROC Explorer Options screen. Configuring the path will copy the report output (in the form of ROC files) to your local PC.

Select **Options** from the **Tools** menu on the Report Output Explorer Menubar.

The following figure shows an example of the ROC Explorer Options screen.

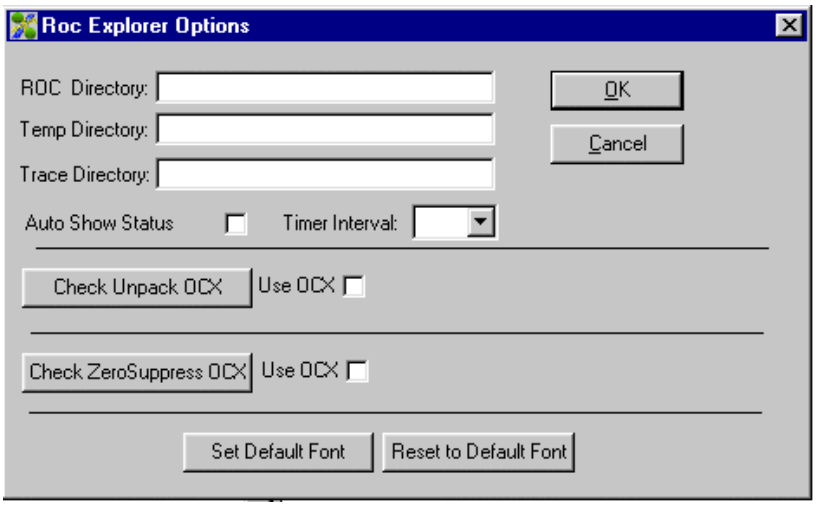

Figure 1–3. ROC Explorer Options screen

Roc Explorer has the following options:

ROC Directory - Enter the path where the ROC files are located on this systems host machine. The NFS client will achieve this.

Temp Directory - This path identifies the directory on your PC which stores the ROC output once the file is accessed. This is the local work area used by the interface and is your work area. Whenever you access a particular report, a copy of the report is also saved automatically to your local PC (your Temp Directory).

Trace Directory - The Trace Directory identifies the location of the LINC generated trace files for a particular report on this systems host machine. You can use these files to identify possible reasons for failure in the running of the report.

Auto Show Status - when set to 'Yes', this field allows you to view the status of the individual reports. On your Report Output Explorer, a green file icon next to the report name indicates that the report is available for viewing. A red file icon indicates that the file is unavailable for viewing. The file may be deleted from your directory. A blue file icon indicates that the file is available for fast loading. This means that you have seen the file once and therefore have a copy of it in your Temp Directory.

Timer Interval - setting a time on this field allows the reports to be refreshed continuously for every set time. This facility is useful if you are waiting for the report to appear on your list after you have run the report. A small blue clock appears on the bottom right corner of your screen to indicate that the timer has been set.

Check Unpack OCX - this button allows you the option of faster access to reports viewed via ROC Explorer. Click on this button to enable the **Use OCX** tick box, and to reveal two further options:

- **Make Local Copy** – this option brings reports into the local directory, if available, for quicker access.
- **Buffer Size** – this is the size of the buffer available for use by ROC Explorer. It should be left at its default value (normally 15).

To switch off Unpack OCX, and hide the above two options, click on the **Use OCX** tick box.

Check Zero Suppress OCX - this allows the following reports to be zero suppressed. Zero suppression removes zeros from a report, reducing the paper used. For each report that can be zero suppressed, a template is provided with the system. This template provides a layout of the report with zero suppression active, and is customised to produce individual reports.

- ACCRUALLST – Interest Accrual List
- CAACBAL – Client Account Balances
- CACCDTL – Client Account Details
- CAACLST – Client Account List
- CAACTURN – Client Account Turnover
- FXPOSNS – FX Position Summary
- PROFITSUM – Profits Summary

To activate Zero Suppression in ROC Explorer:

- Open the ROC Explorer Options by clicking on **Tools** and **Options** in the menu.
- Click the **CheckZeroSuppress OCX** button
- Switch On the "Use OCX field" and Click **Ok**

Other fields on this menu control the following functions:
Template Directory - the directory in which the templates used for the suppression are stored
Template List - this is a list of the available templates. There must be one for each report

When zero suppression is activated, the icon representation of the reports in ROC that are valid for zero suppression will be altered by a "z" appearing in the corner of the icon. For these reports, zero suppression happens automatically. If you want to view a report without zero suppression, there are two methods that can be used:

- In the 'View' menu, switch Off the 'Zero Suppress within Reports' option. This is only visible when zero suppression has been turned on.
- For individual reports, right Click with the mouse on the report icon and select **View Without Suppression** from the menu

Set Default Font - this button allows you to change the font used for reports in ROC Explorer. If OCX is installed and available, this button is labelled **Set Default Font**. Otherwise, it is labelled **Check Font OCX**. Click on this button to display the **Font** window. Details of the default font are highlighted in this window. You can select a different font, and click **OK** to close the window. To revert to the original default font, click **Reset to Default Font**.

***Note**: The **Unpack OCX** and **Default Font** options operate independently of each other; you do not have to enable Use OCX in order to select a new font.*

Click **OK** to record all the entries you have made on the ROC Explorer Options screen.

Reports initiated using the Report Run Parameters (RPMTR) screen, are stored in a temporary directory and can be accessed and viewed using Report Output Explorer. Report Output Explorer displays the user name, the report name, the date and time the report was initiated and in functionality, is similar to Microsoft Windows Explorer.

Report Output Explorer displays the various reports and the user names in a report tree format under the heading 'ROC Files' on the left section of the screen. Double click on a User name to view the reports initiated by the user. Next, double click on the report name. For example, to view the BASEUPD – Base Rates Update report double click on BASEUPD. Report Output Explorer will display the different dates that BASEUPD was run. Double click on the date to view the different times the report was run on that date. Finally, select a time and double click to view the report.

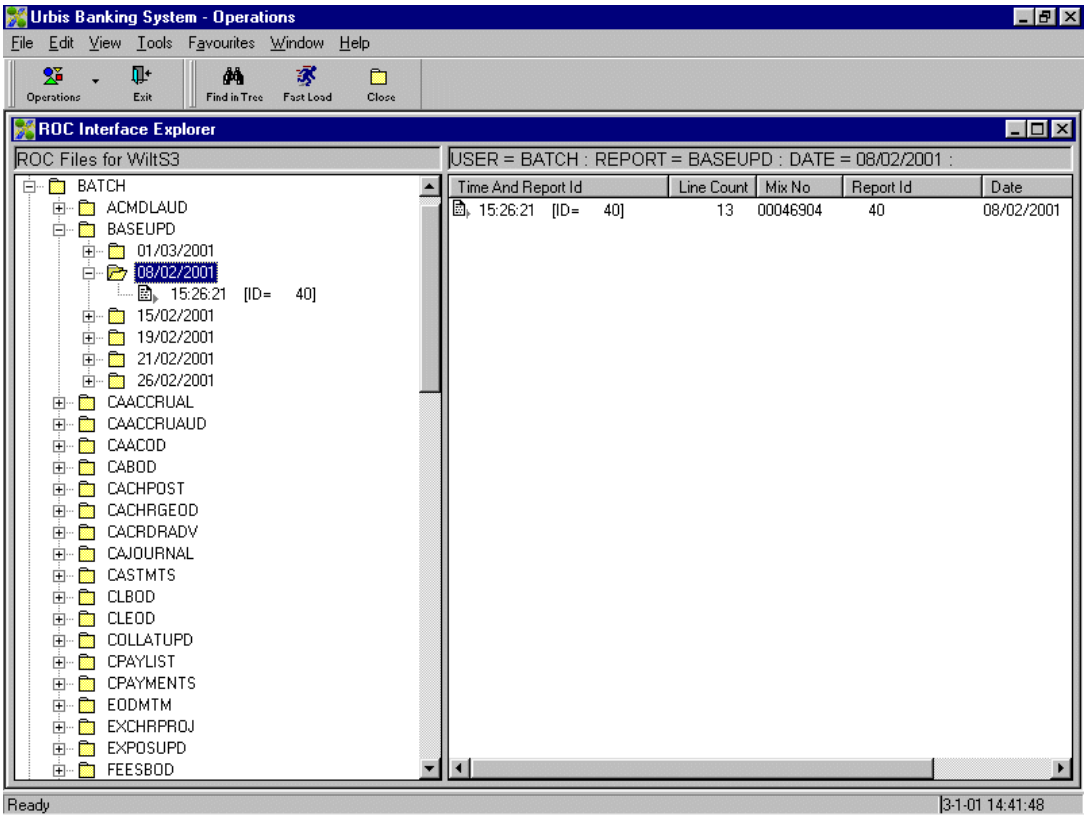

Figure 1–4. Example of Report Output Explorer

To find a report on a report tree, click on the 'Find in Tree' icon. To print the list of reports select 'Print TreeView' from the Edit menu. Report Output Explorer prints the Report list as it appears on your screen.

You can view the report tree using the different options available. Right mouse click anywhere on the left section of the explorer and select an option from the 'View By' menu. For example, to view items by date, followed by the report name and then the user, select Date/Report/User from the 'View By' menu.

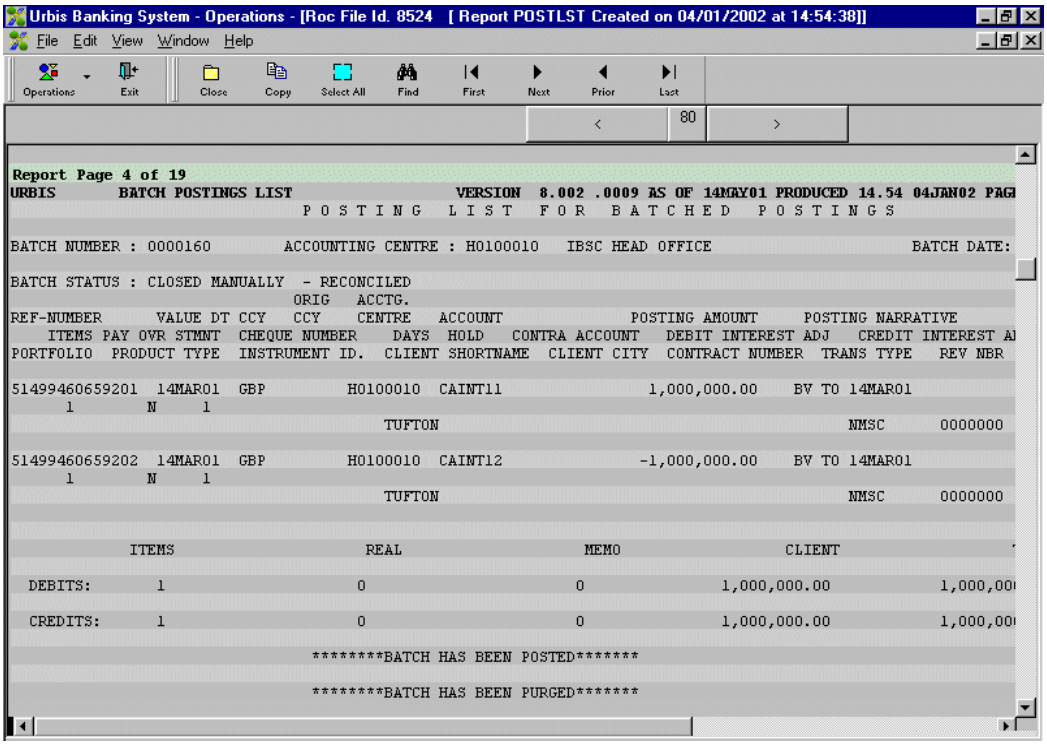

Figure 1–5. Example of POSTLST - Batch Postings List Report

Each report is identified by a unique identity number. For example, the POSTLST - Batch Postings List report shown above has an identity number 8524. This number is displayed on the Report header along with the name of the report, the date and time the report was created.

Once you have opened the report you can do any of the following:

- Click the **Select All** icon to select the report.
- Select a part or all of the report and click the **Copy** icon to copy the selection onto the clipboard. You can then paste the selection and save it as another file type. For example, you can save it as a Microsoft Word file.
- Select the **Modification as Text** option from the Edit menu to open the report in a text format. Here you are allowed to make any modifications that are required on the report. For example, you can select and delete a part of the report.
- Click the greater than **(>)** button to maximise the report and zoom out. Likewise, click the lesser than **(<)** button to minimise the report and zoom in.
- Use the **First, Next, Prior** and **Last** buttons to move between the report pages. The page numbers are displayed on the light green line on the top most line of the report.

- Click the **Find** icon to find a particular text on the report. The **Find** window will be displayed. To find a page number select 'PageNo' on the **Find where** field. Likewise to find a line, select 'Line' on the **Find where** field. Next, enter the text you are searching for in the **Find what** field and click the **Find Next** button. The search will highlight the line which includes the text you are searching for. To find the next instance of highlighted text, continue to click the **Find Next** button.

- Select the **Print Report** option from the File menu to print the entire report, a selected number of pages or a selection.

- Click the **Close** icon to close the report and return to Report Output Explorer.

- Use the **Save As** option to save the report as a separate file to a particular directory. The report must be saved as a powersoft file (with a .psr extension) if you require to open it using the PSR Viewer option. Select the **PSR Viewer** option to view the reports that have been saved as powersoft files in your local PC.

***Note**: You must clear your temporary directory on your terminal periodically where all the reports are stored. If not, it could lead to a shortage of disk space and take a longer time to retrieve a report.*

You can only view a report if you are authorised to run it.

Colon Commands

This option is available under the **View** menu on the toolbar and allows you to view the following:

Display Users of the System [:WHO]
Displays all the names of the users who are currently logged on to the system.

Display Running Reports [:REP]
Displays the names of the Reports currently running.

Display Reports in Recovery [:REP in Recovery]
Displays the names of the reports that have been started but have failed to run and therefore need to be run again. If there are no reports in the queue, the message "There are no reports awaiting restart" will be displayed.

Display Environment Settings [:ENV]
Displays environmental information, such as the ORACLE SID against which the LINC System is running and the setting of the various environment variables.

Display High Account Month [:HAM]
Displays the month with the high account

Display Low Account Month [:LAM]
Displays the month with the low account

Display/Set Language [:SLA]
The Display Language Setting option allows you to view the language that is currently set up in the system. The Set Language option allows you to set up further languages.

Display/Set Cursor Pool Size [:CPS]
The Display Cursor Pool Size option allows you to view the cursor size that is currently set up in the system. The Set Cursor Pool Size option allows you to change the size.

Stop the System [:STO]
Select the ‘Stop the System’ option to stop the system. This will log out all users using the system. Select the ‘Stop and Disable the System’ option to stop and disable the system. The users will not be able to log in until the system is enabled.

Section 2
Core On Demand Management Reports

How To Use This Section

This section describes On-Demand Management reports that are applicable to both the non-retail and the retail systems. The reports are given in alphabetical order by report mnemonic.

Management reports are designed to provide printed output; they do not update the database. They can be run during the online day or during the Overnight process without affecting the availability of records or files within the database.

For each report, this section gives:

- The report mnemonic and the title of the report
- The purpose of the report
- The report format numbers (if any)
- The run time options (if any)
- An example of the report layout

Accounting Centre and Location Option

On several reports, the “Accounting Centre” and “Location” option enables the report to be produced for a specific accounting centre or for a specific location. This option is entered on the Report Run Parameters (RPMTR) screen (See “Running Report Programs Online” in Section 1 of this guide for further details.). If the option is not used, a consolidated report is produced for all accounting centres.

The level at which you run a report depends on the settings on the Reports (REPS) screen. See the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for a description of this screen. For example, you may not be allowed to select a particular location on the Report Run Parameters (RPMTR) screen because it has already been specified on the Reports (REPS) screen that the report has to be run at the Accounting Centre level.

Date Formats for Reports

Where dates are entered as options in reports, the format you must use for the date is determined by the BP-DATE-FORMAT blueprint parameter. The format of dates output on reports is also determined by this blueprint parameter. The possible formats are DDMMYY (UK format), YYMMDD (International format), or MMDDYY (US format). For more information on this parameter, see Appendix C of the *Guide to Setting Up*.

ACAVEBAL - Accounting Centre Average Balance

This report lists the average balance of each general ledger account within a specific accounting centre between two dates. You must enter the accounting centre on the Report Run Parameters (RPMTR) screen.

The start and end dates, defining the dates between which the average balance is calculated, are specified at run time. The default is between the earliest date on which there was a balance on the account, and today.

The details on the report are listed in account number order. The following information is provided for each account within the specified Accounting Centre:

- The currency of the account
- The average balance between two dates

Run Time Options for ACAVEBAL

The following table gives the options available on the Run Time Options screen.

Table 2–1. Accounting Centre Average Balance - Run Time Options

Option Narrative	Definition	Type/Text Length
Currency	Selects accounts of a specific currency. The default is all currencies	CCY/4
Start Date End Date	You can print average balances for a specific period using the Start Date and/or End Date options. The default Start Date is the earliest date of which a balance was recorded on the account. The default End Date is today.	DAT/6 DAT/6
Suppress Zero Balances	Enter "Y" to remove from this report all account records with a zero balance.	ALP/1

This report can be run at accounting centre and location levels.

Example of Report Layout

ACNTMLST - Accounting Centres List

This report lists all accounting centres set up in the system. For each accounting centre, the following information is shown:

- Accounting Centre identifier
- Type of Accounting Centre
- Name, address and country of residence of the bank
- Default printer used for confirmations and payments
- Exchange Rate Group
- GL Master

The report has no options.

This report can be run only at the system level.

```

ADDRESSRI - Check Client Names/Addresses

This report lists breaches of referential integrity for client names and/or addresses.

Client names and addresses are set up using the Client Names and Addresses (NAMDM) screen; they are used when sending confirmations and/or statements to clients. It is recommended that you run this report each time you delete a client's name or address from the system.

This report provides the following details:

- Addresses that are required when sending statements but which have not been set up on the Client Names and Addresses (NAMDM) screen
- Addresses that are required when sending confirmations but which have not been set up on the Client Names and Addresses (NAMDM) screen
- Addresses that are set up on the Client Names and Addresses (NAMDM) screen but are not used for sending either statement copies or confirmations

Run Time Options for ADDRESSRI

The following table gives the options available on the Run Time Options screen.

Table 2–3. Check Client Names/Addresses - Run Time Options

Option Narrative	Description	Type/Text Length
Statement Copies (Y/N)	Indicates whether (Y) or not (N) you wish to identify addresses used for sending statement copies, that have not been set up on the Client Names and Addresses (NAMDM) screen.	ALP/1
Confirmation Addresses (Y/N)	Indicates whether (Y) or not (N) you wish to identify confirmation addresses that have not been set up on the Client Names and Addresses (NAMDM) screen.	ALP/1
Client Name and City (Y/N)	Indicates whether (Y) or not (N) you wish to identify addresses that have been set up on the Client Names and Addresses (NAMDM) screen, but are not used for sending either statement copies or confirmations. The default for each of these options is Y.	ALP/1

This report can be run only at the system level.

BASELST - Base Rates List

This report lists all base rates held on the Base Rates Maintenance (BASEM) screen. For each base rate, the following information is displayed:

- Base rate identifier
- Mnemonic of the currency used for the base rate
- Date from which the base rate applies
- Base rate
- Description of the base rate

The report has no options.

This report can be run only at the system level.

Example of Report Layout

CCYSLST - Currencies Details

This report provides a list of all currencies and currency limits maintained by the bank. The following information is displayed for each currency mnemonic:

- Currency longname
- A code indicating the truncation for amounts in the currency
- The number of decimal places for the currency
- The type of exchange rate for the currency, multiplier (M) or divisor (D)
- The number of days in the year, used for interest calculation
- The percentage variation from the spot rate allowed (Warning and Management rates)
- S.W.I.F.T. currency
- The end-of-day and intra day long and short limits for the currencies. These are shown for:
  - Foreign exchange open position
  - Borrowing
  - Lending
  - Combined
- Group currency indicator
- Up to 20 currencies forming the composite currency and their percentage contribution towards the total

The report has no options.

This report can be run only at the system level.

EXCHLST - Exchange Rates List

This report lists details of exchange rates and forward exchange rates for each exchange rate group and currency.

The following information is listed:

- Value date
- Input time
- Market buy and sell rates
- Mid-market rate last night and today
- Buy and sell rates over forward periods. This is shown as the difference between the current spot rate and the forward rate in points or cents.

If there are no forward exchange rates for the group and currency, an explanatory message will be printed.

The report has no options.

This report can be run only at the system level.

FRAMELST - Report Layouts

This report has been designed specifically for use by LINC developers who are customising the reports in the system. It can be used to view how text will be inserted into the frames of a LINC report.

When the developer has completed the LINC coding of a report, this report can also be used to assist with the customisation of the text in report print outs. It shows how the text that is held in a separate file (FRAMELST.CASE) will be inserted into the frames of a report. The customiser can then decide whether any further customisation is required via the Report Header (RHEAD) and Report Text (RTEXT) screens, see the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for details.

Run Time Options for FRAMELST

The following table gives the options available on the Run Time Options screen.

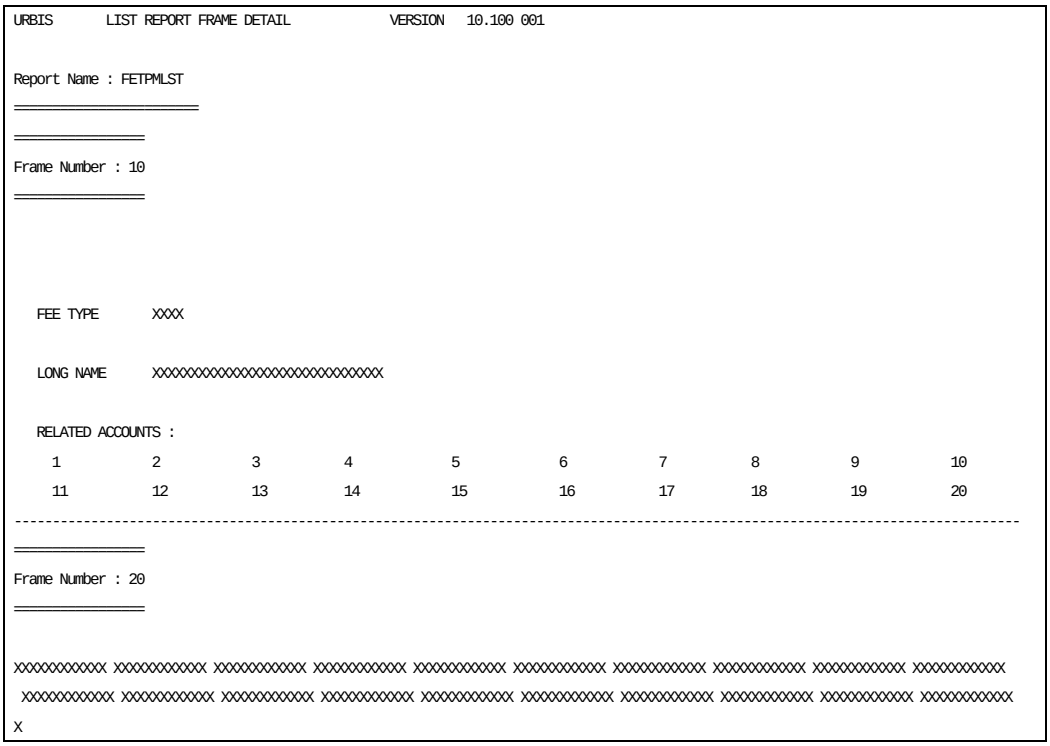

Table 2–5. Report Layouts - Run Time Options

Option Narrative	Definition	Type/Text Length
Start Report	The mnemonic of the report (such as FETPMLST) for which you want to print the frame headers and text. This field can be used in conjunction with the End Report field to define the group of reports for which details will be printed. The group of reports will begin with the report identified in the Start Report field. If this field is not completed, then it defaults to the name of the first report in alphanumeric order.	ALP/10
End Report	The mnemonic of the last report for which you want details. This field is used in conjunction with the Start Report field to define the group of reports for which details will be printed. The group of reports will begin with the report identified in the Start Report field. If the End Report field is not completed, then it defaults to the name of the final report in alphanumeric order. If neither of these two fields is completed, then all the reports in the system are printed.	ALP/10

Option Narrative	Definition	Type/Text Length
Create New Case Extract File	This field must be set to N unless a LINC developer has changed the structure of a report and used the LINC Case Extract Utility (CEX) to produce a new Case Extract file. When this field is set to Y, FRAMELST will format the Case Extract file so that it can produce a print-out of how the text will be inserted into the report's frames.	ALP/1

This report can be run only at the system level.

GLACDTL - General Ledger Account Details

This report lists the following details for each general ledger account held by the bank:

1. Basic account details. These include:
   - Account name, number and status
   - Category of the general ledger
   - Accounting Centre to which the account belongs
   - Date account opened and closed
   - Latest balance and turnover figures for the account
   - Net average balance of the account in the year to date
   - Days in credit or debit in the period to date
   - Average credit or debit balance in the period to date
2. Account interest conditions. These are only shown if the account has general interest conditions associated with it. "General" interest conditions can be recorded for Backing general ledger accounts. These interest conditions are defined using the Interest Conditions (INTSM) screen. These conditions are then applied to a client account by setting the Credit or Debit Interest conditions to "General" on the Client Accounts Static Details (WACCM) screen. Client accounts can also be designated "special" in order to apply separate interest conditions from similar client accounts backed by the same general ledger. See the *Clients and Accounts Administration Guide* for full details.

   Details of account interest conditions include:
   - Base rate charged
   - Base rate number
   - Date interest conditions become effective
   - Interest levels (1 - 4)
   - Interest rate that applies to each interest level
   - Maximum and minimum rate of interest that can be charged on the account
3. Period history for the account. This includes:
   - Balance of the account as at period end
   - Current value balance of the account
   - Net average balance for the year to date
   - Average credit and debit balances in the period
   - Days in credit or debit in the period

An option allows the report to be produced for a specific account.

Run Time Options for GLACDTL

The following table gives the options available on the Run Time Options screen; the report will only run if one of these options is entered.

Table 2–6. General Ledger Account Details - Run Time Options

Option Narrative	Definition	Type/Text Length
Accounting Centre@Account Number@Currency	Prints details for a specific accounting centre, general ledger account and currency combination.	GLK/24
Print all GL Accounts (Enter “ALL”)	Prints details for all general ledger accounts.	ALP/3
Account Number	Prints details of the specified account for all accounting centres and currencies.	ALP/12

This report can be run at accounting centre, location and system levels.

GLACLST - General Ledger Accounts List

This report lists all general ledger accounts in the system in the following order:

1. Accounting Centre
2. Currency
3. Account number

For each general ledger account/currency combination, the following information is shown:

- Full name and number of the account
- Current book balance of the account
- Type of account
- Category of the account
- Status of the account
- General ledger master number
- Date the account was opened
- The exchange rate against the base currency
- The date the exchange rate was input

This report can be run at accounting centre, location and system levels.

Run Time Options for GLACLST

The following table gives the options available on the Run Time Options screen.

Table 2–7. General Ledger Accounts List - Run Time Options

Option Narrative	Definition	Type/Text Length
Exchange Rate Group	Selects a specific exchange rate group. The default is the exchange rate group set up at installation.	ALP/4
Value Date (DDMMYY)	Prints records with the selected value date.	NUM/6
Suppress Zero Balances (Y/N)	Enter "Y" to remove from this report all account records with a zero balance.	ALP/1
Suppress Inactive Accounts (Y/N)	Enter "Y" if inactive GL accounts are not to be extracted for printing in the report. The default is "N".	ALP/1
Suppress Closed Accounts (Y/N)	Enter "Y" if closed GL accounts are not to be extracted for printing in the report. The default is "N".	ALP/1

This report can be run at accounting centre, location and system levels.

GLACTURN - General Ledger Account Turnover

This report is produced at the end of each accounting period to show the credit and debit movements (turnover) on each account. Total turnover figures for the whole period are also produced.

For each general ledger master the report lists the following:

- Account name number
- Currency
- Period turnover

An option allows the report to be produced for a specific period or periods.

Run Time Options for GLACTURN

The following table gives the options available on the Run Time Options screen.

Table 2–8. General Ledger Account Turnover - Run Time Options

Option Narrative	Definition	Type/Text Length
Number Of Periods	Prints the report for the number of previous accounting periods entered (1-99). The default prints the report for the last accounting period only.	NUM/2
Currency	Prints the report for the selected currency.	CCY/4
Account Number	Prints the report for the account selected.	GLA/12

This report can be run at accounting centre, location and system levels.

Example of Report Layout

GLADMLST - Account Definitions Table Report

This report lists the details of the General Ledger Account Definition (GLADM) table. It displays the following information:

- Account Number
- Account Name
- FX Revaluation indicator (Y or N)
- Account Category
- Account Type
- Status Code
- Indication of automatic account number generation (Y or N)

This report has no options.

This report can be run only at the system level.

GLBOOKING - General Ledger Postings Journal

This report lists all posting (whether entered manually or generated by the system), to General Ledger real or memo accounts.

The postings are reported in the following order:

- Accounting Centre
- Currency
- Account number/name
- Input Date

The report shows the value of each debit and credit posting for each book date, to each General Ledger account, in the order shown above. It also prints the opening and closing balance for each account, both in the currency of the account and in the base currency.

Options exist to restrict the output to selected start and/or end input dates.

The report should be run daily.

Run Time Options for GLBOOKING

The following table gives the options available on the Run Time Options screen.

Table 2–9. General Ledger Postings Journal - Run Time Options

Option Narrative	Definition	Type/Text Length
Start Date	Produces a report with postings listed from the date specified.	DAT/6
End Date	Produces a report with account postings up to the date specified.	DAT/6
GL Account Number	Produces a report for the specified account. Up to 10 accounts may be requested at one time.	ALP/12
Start Account No.	Produces a report for a range of account numbers from the Start Account No. to the End Account No. entered.	ALP/12
End Account No.	Displays posting details for a range of account numbers from the Start Account No. to the End Account No. entered.	ALP/12
Currency	Only accounts for the specific currency entered are reported.	ALP/4

Option Narrative	Definition	Type/Text Length
Master Number	All related accounts defined on the GL Master (GLMAM) screen are reported.	NUM/6

This report can be run at accounting centre, location and system levels.

GLBSHEET - General Ledger Balance Sheet

This report consists of four sections:

1. Individual Accounting Centre Currency Conversion

   For each accounting centre, this section lists all accounts included in the balance sheet. For each account, the balance is shown in both the account currency and the currency specified when the report is run. The exchange rate used is also shown. Sub-totals are given for each group of accounts, as either “asset” or “liability”.

2. Consolidated Currency Conversion

   This section gives the complete balance sheet, in the American format. The consolidated balance sheet is produced for the bank overall.

3. Individual Accounting Centre Balance Sheet

   This section gives a balance sheet for each individual accounting centre in the bank. Sub totals are shown for three levels of account group. The format is as specified at installation.

4. Consolidated Balance Sheet

   This section gives the consolidated balance sheet for all accounting centres in the bank.

Note: *The “Accounting Centre” option can be entered for this report on the Report Run Parameters (RPMTR) screen. However, if this “Accounting Centre” option is used, the “Sector”, “Sector@Subsector” and “Profit Centre” options cannot be used on the Run Time Options screen.*

This report will sort in Accounting Centre order, when the report is run for all the branches.

Report format numbers for GLBSHEET

The following table gives the Report Format Numbers that can be entered on the Report Run Parameters (RPMTR) screen.

Table 2–10. General Ledger Balance Sheet - Report Format Numbers

Report Format Number	Definition
1-9	Produces the balance sheet in the layout selected. These layouts are designed using the Trial Balance/Balance Sheet Maintenance screen (TBBSM).

Run Time Options for GLBSHEET

The following table gives the options available on the Run Time Options screen.

Table 2–11. General Ledger Balance Sheet - Run Time Options

Option Narrative	Definition	Type/Text Length
Individual Reports (Y/N)?	This indicates whether separate reports are required for each accounting centre. The default is 'No'.	ALP/1
Balance Sheet Date	The date reported by the trial balance. The default is the offline as-of date.	DAT/6
Sector	Enter the mnemonic representing a sector to limit the report to a sector. These mnemonics are set up on the General Narratives table (GNARR), table type, SE. This field must not be used if the SectorSub-sector field is completed. If this field and the SectorSub-sector field are left blank, then all accounting centres are reported.	ALP/2
SectorSub-sector	Enter the mnemonics representing a sector and a subsector to limit the report to a subsector. The sector and subsector mnemonics are set up on the General Narratives table (GNARR), table types, SE and SS respectively. This field must not be used if the Sector field is completed. If this field and the Sector field are left blank, all accounting centres are reported.	ALP/6
Profit Centre	Enter the mnemonics representing a profit centre to limit the report to an accounting centre. The profit centre mnemonics are set up on the General Narratives table (GNARR), table type, PF respectively. This field can be used only if the SectorSub-sector field is completed. If this field is left blank but the SectorSub-sector field is completed, then all accounting centres within the subsector are reported.	ALP/2
Currency	The currency in which all amounts are reported. The default is the system base currency.	CCY/4

Option Narrative	Definition	Type/Text Length
Balance - Book (B) or Value (V)	Indicate whether the book balance or value balance is to be reported. The default is the book balance.	ALP/1
Print Zero Balances Y or N	Enter "Y" if zero balances are to be reported. The default is "N".	ALP/1
Print Account Names (Y/N)?	Enter "Y" to print account names. The default is "N".	ALP/1
Suppress Inactive Accounts?	Enter "Y" if inactive GL accounts are not to be extracted for printing in the report. The default is "N".	ALP/1
Suppress Closed Accounts?	Enter "Y" if closed GL accounts are not to be extracted for printing in the report. The default is "N".	ALP/1

This report can be run at accounting centre, location and system levels.

GLDFLST - General Ledger Default Masters List

This report prints details of all the default general ledger masters, in order of accounting centre. The following details are displayed:

- Accounting Centre
- Product Type
- Contract type
- Internal client type
- Default general ledger master number
- Bought/Sold indicator (For FRAs only)

The report has no options.

This report can be run only at the system level.

GLJOURNAL - General Ledger Postings Journal (1)

This report lists all postings (whether entered manually or generated automatically) to general ledger (real or memo) accounts. The selection of a posting for inclusion in the report is based upon its input date.

The postings are reported in the following order:

- Accounting Centre
- Account number and currency
- Transaction type
- Reference number

The report also prints the value date of the posting if this differs from the date when the posting was entered.

The report shows the total debits, total credits and the total amount for each Accounting Centre, transaction type and currency. Debit and credit totals are printed for each account and for individual postings. Opening and closing book balances are also printed for each account.

Backing account postings which have changed an account balance, but which have not yet been assigned a posting reference number, are shown with a zero reference number.

Options enable the report to be produced for a specific date, the online date or the offline. The default date is the online as-of date.

Any GL account book balance adjustment postings as a result of backdated postings are reported separately from the main part of the report.

The report should be run daily.

Run Time Options for GLJOURNAL

The following table gives the options available on the Run Time Options screen.

Table 2–12. General Ledger Postings Journal - Run Time Options

Option Narrative	Definition	Type/Text Length
Journal Date	Produces the report for a specific date. The default is the online as-of date.	DAT/6
Yesterday's Journal Date Y or N	Produces the report for the offline date if “Y” is entered.	ALP/1

This report can be run at accounting centre, location and system levels.

GLTBAL - General Ledger Trial Balance

This report lists the real and memorandum general ledger accounts. Each account is reported on a separate line. A trial balance is produced for each currency, with control totals at the end of each currency section.

A consolidated trial balance for the bank is also printed unless you have selected the “Accounting Centre” option.

The report can be printed in either the American or European format as specified at installation.

Report Format Numbers for GLTBAL

The following table gives the Report Format Numbers that can be entered on the Report Run Parameters (RPMTR) screen.

Table 2–13. General Ledger Trial Balance - Report Format Numbers

Report Format	Definition
1-9	Produces the trial balance in the layout selected. These layouts are designed using the Trial Balance/Balance Sheet Maintenance screen (TBBSM).

Run Time Options for GLTBAL

The following table gives the options available on the Run Time Options screen.

Table 2–14. General Ledger Trial Balance - Run Time Options

Option Narrative	Definition	Type/Text Length
Trial Balance Date	The date reported by the trial balance. The default is the offline as-of date.	DAT/6
Reporting Balance (B)ook or (V)alue	Enter B (book balance) or V (value balance) to indicate the balance to be reported. The default is the book balance.	ALP/1

Option Narrative	Definition	Type/Text Length
Sector	Enter the mnemonic representing a sector to limit the report to a sector. These mnemonics are set up on the General Narratives table (GNARR), table type, SE. This field must not be used if the Sector Sub-Sector field is completed. If this field and the Sector Sub-Sector field are left blank, then all accounting centres are reported.	ALP/2
Sector Sub-Sector	Enter the mnemonics representing a sector and a subsector to limit the report to a subsector. The sector and subsector mnemonics are set up on the General Narratives table (GNARR), table types, SE and SS respectively. This field must not be used if the Sector field is completed. If this field and the Sector field are left blank, all accounting centres are reported.	ALP/6
Profit Centre	Enter the mnemonics representing a profit centre to limit the report to an accounting centre. The profit centre mnemonics are set up on the General Narratives table (GNARR), table type, PF respectively. This field can be used only if the Sector Sub-Sector field is completed. If this field is left blank but the Sector Sub-Sector field is completed, then all accounting centres within the subsector are reported.	ALP/2
Print Zero Balances (Y/N)	Indicate whether zero balances are to be reported.	ALP/1

This report can be run at accounting centre, location and system levels.

GLTRNLST - General Ledger Account Postings List

This report provides details of the postings made to each general ledger account during a specified period. The postings are reported in the following order:

- Sector
- Currency
- GL account number
- Value date

The following information is displayed:

- Usercode of user that entered the posting (if the posting was generated automatically, then SYSTEM is displayed in this field)
- Value date of posting
- Posting narrative
- Debit or credit amount
- Account balance after posting was performed
- Posting reference

For each combination of general ledger account number, currency and sector, the report gives:

- Total number and value of debits
- Total number and value of credits

Run Time Options for GLTRNLST

The following table gives the options available on the Run Time Options screen.

Table 2–15. General Ledger Account Postings List - Run Time Options

Option Narrative	Definition	Type/Text Length
Sector	Enter a sector code (such as HO) to produce a report for the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2
Sub Sector	Enter a sub sector code to produce a report for the specified sub sector. Sub sectors are set up on the General Narratives (GNARR) screen, table type SS.	SSC/4
GL Account Number	Enter a general ledger account number to produce a report for the accounts that have the specified number.	GLA/12
Currency	Enter a currency code to restrict the report to general ledger accounts that have the specified currency. Currency codes are set up on the Currencies (CCYS) screen.	CCY/4
Start Date	The date from which the report will display posting details. The report defaults to the current system date.	DAT/6
End Date	The last date for which the report displays posting details. The report defaults to the current system date.	DAT/6
Exclude Sector	Enter a sector code (such as HO) to produce a report that does not include the accounts of the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2

This report can be run only at the system level.

INCOMESTMT - Income Statement

This report produces individual or consolidated income statements for a defined period in a base currency. Options exist to produce reports for:

- Individual accounting centre currency conversion
- Consolidated currency conversion
- Individual accounting centre income statement
- Consolidated income statement

Note: *This report is designed to produce an income versus expense report for a specified period. Whereas the GLBSHEET - General Ledger Balance Sheet report is designed to produce a balance sheet as-of a specified date.*

Report format numbers for INCOMESTMT

The following table gives the Report Format Numbers that can be entered on the Report Run Parameters (RPMTR) screen.

Table 2–16. Income Statement - Report Format Numbers

Report Format Number	Definition
1-9	Produces the income statement in the layout selected. These layouts are designed using the balance sheet option on the Trial Balance/Balance Sheet Maintenance screen (TBBSM).

Run Time Options for INCOMESTMT

The following table gives the options available on the Run Time Options screen.

Table 2–17. Income Statement - Run Time Options

Option Narrative	Definition	Type/Text Length
Print Individual Statements? (Y/N)	Enter “Y” to produce individual accounting centre income statements	ALP/1
Start Date	The date from which the report will displays statement details	DAT/6
End Date	The last date for which the report displays statement details	DAT/6
Year to Date	Enter “Y” to display income statements for the last year to date	ALP/1

Option Narrative	Definition	Type/Text Length
By Area of Business (Y/N)	Enter Y to group the accounting centres by area of business as set up on the Accounting Centres Maintenance (ACNTM) screen. The default is "Y"	ALP/1
Sector	Enter the name of the sector for which the statement has to be printed.	ALP/2
Sector Sub-sector	Enter the name of the subsector for which the statement has to be printed.	ALP/6
Profit Centre	Enter the name of the profit centre for which the statement has to be printed.	ALP/2
Print Audit Trial (Y/N)	Enter "Y" to print the source details from where the statement figures have been derived. The default is "N"	ALP/1
Print Zero Balances (Y/N)	Enter "N" if zero balances are not to be reported. The default is "Y".	ALP/1

This report can be run at accounting centre, location and system levels.

ONSCHED - Overnight Schedule

This shows the reports (together with their options) which are scheduled to run during the next overnight batch run.

Note: *This report must not be included in the OVERNIGHT run itself; if it is, no details will be reported.*

Run Time Options for ONSCHED

The following table gives the options available on the Run Time Options screen.

Table 2–18. Overnight Schedule - Run Time Options

Option Narrative	Definition	Type/Text Length
Report Frequency	Enter a frequency code to limit the report to a list of all reports which have the defined run frequency and which are due to run during the next overnight batch run. Frequency codes are defined on the General Purpose Narratives Table (table type FR).	ALP/8

This report can be run only at the system level.

PCICMLST - Indirect Costs Listing

This report lists the details of the Indirect Costs Maintenance (PCICM) screen. For each account within an accounting centre to which charges are being posted, the report lists each accounting centre between which the costs are allocated, and the percentage of each allocation.

This report has no options.

This report can be run only at the system level.

Example of Report Layout

POSTLST - Batch Postings List

This report prints all postings entered for a batch in the order in which they were entered. Total amounts reported for batches are calculated using the individual postings records. Batched postings are deleted after they have been held for a retention period defined at installation. The report will purge the associated extended narrative records when deleting batch postings records.

Note: *One of the run time options must be set for the report to produce any output.*

The POSTLST report purges three datasets:

1. BHEAD
2. BCHPO
3. BPNRO

1. **Purging BHEAD**

The BHEAD record is purged for a batch for the following:

- If the age of the batch is greater than the retention days
- If the batch is not in ‘Open’ status

Note*: The age of the batch is calculated from the batch open date to system as-of-date (only the working days are taken into consideration) and the retention days are specified using the BP parameter BP-BATCH-HIST.*

2. **Purging BCHPO**

The BCHPO record is purged for a batch for the following:

- The BCHPO records are deleted, if the BHEAD record is deleted for a particular batch.

3. **Purging BPNRO**

The BPNRO record is purged for a batch for the following:

- If the BCHPO records are deleted for a particular batch
- The BPNRO records are deleted, if the BP parameter BP-EXTD-NARR is set to ‘Y’.

Run Time Options for POSTLST

The following table gives the options available on the Run Time Options screen.

Note*: The report purges the records and lists the posting details of the batches for ALL batches, Batch Number, Accounting Centre and Date of Batch options.*

Table 2–19. Batch Postings List - Run Time Options

Option Narrative	Definition	Type/Text Length
Enter ‘All’ For All Batches	Enter 'ALL' to print details of postings entered for all batches.	ALP/3
Batch Number	Prints details of postings for up to ten batch numbers entered. ***Note:*** *When using the Batch Number option, the All Batches option must be blank.*	NUM/7
Accounting Centre	Enter an accounting centre identifier if a report is to be produced for a specific accounting centre. Accounting centre identifiers are defined on the Accounting Centres Maintenance (ACNTM) screen.	DPT/8
Date of Batch	If you wish to print details of batches input on a particular date, enter the date here.	DAT/6
Extract Extended Posting Narrative (Y/N)	Enter "Y" in this field to extract all lines of the extended posting narratives, if BP-EXTD-NARR is set to YES. The default option is "N". If this option is set, the report lists the extended narrative for the batch along with the posting details. ***Note:*** *This option can be set along with the other options.*	ALP/1

This report can be run only at the system level.

POSTSUM - Posting Summary/Extract

This report provides a summary of postings to client or general ledger accounts for a selected time period by accounting centre.

For each accounting centre reported on, the following information is shown:

- Account number and name
- Account currency
- Account type
- Total postings for the account
- Total number of debit and credit postings

Run Time Options for POSTSUM

The following table gives the options available on the Run Time Options screen.

Table 2–20. Posting Summary/Extract - Run Time Options

Option Narrative	Definition	Type/Text Length
Starting Value Date	The start of the reporting period	DAT/6
Ending Value Date	The end of the reporting period	DAT/6

This report can be run only at the system level.

REPRCLST - Report Recipient Identifiers

This report lists all recipients of reports. For each report recipient, the following information is displayed:

- Recipient's identifier
- Recipient's name
- Recipient’s accounting centre
- The recipient which has been deleted

The report has no options.

This report can be run only at the system level.

REPSLST - Reports List

This report lists all reports and gives details of the options that are available with the report. For each report the following information is shown:

- Report number
- Report mnemonic and name
- Report group
- Whether the report is a control report (run overnight) or an online report
- Whether or not pre-printed stationery can be used
- Whether or not the report can be displayed on the screen
- Whether or not the report can be run in parallel with other reports

For each option available with the report, the following details are given:

- Option Number and narrative
- Option type (a 3 character mnemonic to show the option that can be selected, for example, DAT indicates that the option is a date)
- Text length (the length of the option entered on the Run Time Options screen (RTOPS): this can be up to 36 characters long)
- Number of times that the option can be entered

The Reports List can be produced as follows:

- In alphabetical order by report mnemonic
- In numeric sequence by report number followed by a list of unused report numbers
- By report grouping

Run Time Options for REPSLST

The following table gives the options available on the Run Time Options screen.

Table 2–21. Reports List - Run Time Options

Option Narrative	Definition	Type/Text Length
Enter X to Sort by Name	Enter 'X' to list reports by report mnemonic, in alphabetical order.	ALP/1
Enter X to Sort by Group	Enter 'X' to list reports by report grouping.	ALP/1
Enter X to Sort by Number	Enter 'X' to list reports by report number. The default produces three copies of the reports listing; by report mnemonic, by report name and by report number.	ALP/1
Enter X to Print Options	Enter 'X' to print the options associated with each report.	ALP/1

This report can be run only at the system level.

SECAUDIT - Security Access Audit

This report lists all occurrences of attempted security breaches that are currently held on the security log. For each attempt, the following details are printed:

- Station Identifier
- Usercode
- Date and Time
- Action Type
- Security message

Run Time Options for SECAUDIT

The following table gives the options available on the Run Time Options screen.

Table 2–23. Security Access Audit - Run Time Options

Option Narrative	Definition	Type/Text Length
Sort Number	Enter one of the following numbers to indicate the order in which the records are to be sorted: 1 Station Id, date and time 2 Action type, date and time 3 Usercode, date and time 4 Date, time, usercode and action type. This is the default sort order.	NUM/1
Station ID (Sort No. 1 Order)	Specifies the station to be reported. The default is all stations.	ALP/17
Action Type (Sort No. 2 Order)	Specifies the action type to be reported on: ADD Add CHG Change INQ Inquire DEL Delete The default is all action types.	ALP/3
Usercode (Sort No. 3 Order)	Specifies the usercode to be reported. The default is all usercodes.	ALP/10
Start Time in HHMM End Time in HHMM	Specifies the time range to be reported. The format is HHMM. The default start time is zero.	NUM/4

Option Narrative	Definition	Type/Text Length
Start Date	Specifies the earliest date to be reported. The default start date is the current system date.	DAT/6
End Date	Specifies the latest date to be reported. The default end date is the current system date.	DAT/6
Unsuccessful Attempts Only?	Enter 'Y' to limit the report to unsuccessful logon attempts. The default is to report all security messages.	ALP/1

This report can be run only at the system level.

SOSTMLST - Standing Orders Details

This report provides:

- A list of new and existing standing order static details
- Details of any external payments

The “Accounting Centre” field on the Report Run Parameters (RPMTR) screen must be utilised for all the run-time options except the ‘GL Account Number’ option. This causes the report to be run for a single accounting centre.

If the “Accounting Centre” field on the Report Run Parameters (RPMTR) screen is left blank and the ‘GL Account Number’ option is used, then the specified general ledger account will be reported for all accounting centres. If the “Accounting Centre” field and the ‘GL Account Number’ option are both utilised, then the specified general ledger account will only be reported for the specified accounting centre.

The following information is printed by this report:

- Reference number
- Debit account identifier
- Credit account identifier
- Standing order type
- Cross-currency details (if any)
- Payment amounts and frequencies
- Payment narratives
- Payee and nostro details (if any)
- Event details

In addition, the report shows the total number of standing orders for the specified Accounting Centre, and the total number of standing orders shown on the report.

Run Time Options for SOSTMLST

The following table gives the options available on the Run Time Options screen.

Table 2–24. Standing Orders Details - Run Time Options

Option Narrative	Definition	Type/Text Length
Client Account@Ccy	Enter a client account number to select a specific client account.	CAA/16
GL Account Number	Use this option in conjunction with the 'GL Currency' option to produce the report for a specific general ledger account.	GLA/12
Currency	This option must be utilised to specify the account currency when the 'GL Account Number' option is used. Otherwise it must not be used.	CCY/4
Client Shortname@City	Produces the report for the client shortname/city combination entered.	SNC/19
General Ledger Master Number	Produces the report for the general ledger master selected.	NUM/6

This report can be run at accounting centre and system levels.

SPMTRLST - System Parameters List

This report prints all details from the system parameters record, as set up on the System Parameters (SPMTR) screen at installation. The following information is displayed:

- System name
- Day of the month profit is taken, and number of the month the profit is taken
- If profit is taken at the end of each month, one of the following codes indicating the day of the month on which profit is taken:
  - LC, Last calendar day
  - LW, Last working day
  - PC, Penultimate calendar day
  - PW, Penultimate working day
- Main Accounting Centre
- Inter Accounting Centre Transfers Account Number
- Central Bank S.W.I.F.T. Address
- Interface and Message Sequence Number
- EMU conversion status, including whether EMU conversion is active, the EMU exchange rate group, and the Euro currency code
- Statutory reporting currency and withholding tax reporting minimum
- Date of last tax period reported for withholding tax
- Number of the real error suspense account, and the memo error suspense account
- Number of the Other Currencies Control Account
- Number of the compensation account
- Name of the system default printer
- The numbers of the last batch, hold, contract, travellers cheque, and client entered in the system
- Payment advice number
- Furthermost advance payment and confirmation due
- Last time the COSTALLOC - Indirect and Direct Cost Allocations report was run
- Offline Transactions by priority
- Whether or not installation is complete (“Y” indicates that installation is complete, “N” indicates that installation is not complete)
- Current system status
- Time the system closes

The report has no options.

This report can be run only at the system level.

STMNTCON - Statement of Condition

This report produces a summary statement of the postings made to general ledger accounts for a defined period. You define the general ledger accounts to be included in the statement using the Trial Balance/Balance Sheet Maintenance (TBBSM) screen. You also use this screen to define the format of the statement. The report prints details of:

- The balance information at the beginning of the "Start Date", see the Run Time Options for this report
- The total value of the credits in the period from the "Start Date" to the "End Date" inclusive
- The total value of the debits in the period from the "Start Date" to the "End Date" inclusive
- The balance information at the end of the "End Date", see the Run Time Options for this report

***Note**: For a general ledger backing account that is used for both credit and debit postings, the net amount (zero) is posted to the account. However, this report gives details of all the debits and credits within the defined period irrespective of netting.*

Report format numbers for STMNTCON

The following table gives the Report Format Numbers that can be entered on the Report Run Parameters (RPMTR) screen.

Table 2–25. Statement of Condition - Report Format Numbers

Report Format Number	Definition
1-9	Produces the statement of condition in the layout selected. These layouts are designed using the statement of condition option on the Trial Balance/Balance Sheet Maintenance screen (TBBSM).

Run Time Options for STMNTCON

The following table gives the options available on the Run Time Options screen.

Table 2–26. Statement of Condition - Run Time Options

Option Narrative	Definition	Type/Text Length
Individual Reports (Y/N)	Enter “Y” to produce reports for all the individual sectors and a consolidated report for all sectors. Enter "N" to produce a consolidated report only. This is the default. See also "Exclude Sector" below.	ALP/1
Sector	Enter a sector code (such as HO) to produce a report for the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2
Currency	Enter a currency code to restrict the report to general ledger accounts that have the specified currency. Currency codes are set up on the Currencies (CCYS) screen.	CCY/4
Start Date	The date from which the report will display statement details.	DAT/6
End Date	The last date for which the report displays statement details.	DAT/6
Sector to Exclude	Enter a sector code (such as HO) to produce a report that does not include the accounts of the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2
Conversion (Y/N)	Enter "Y" to produce a conversion report showing the foreign currency accounts contributing to the consolidated report. This report also shows the exchange rates used to convert foreign currencies into the base currency. The default is not to produce the conversion report.	ALP/1
Print Zero Balances (Y/N)	Indicate whether zero balances are to be reported.	ALP/1

This report can be run only at the system level.

STMNTINC - Income Statement (1)

This report produces a summary statement of the postings made to general ledger accounts for a defined period. You define the general ledger accounts to be included in the statement using the Trial Balance/Balance Sheet Maintenance (TBBSM) screen. You also use this screen to define the format of the statement. The report prints details of:

- The total value of the credits in the period from the beginning of the "Start Date" up to the end of the "End Date"
- The total value of the debits in the period from the beginning of the "Start Date" up to the end of the "End Date"
- The balance information at the end of the "End Date", see the Run Time Options for this report
- The average balance for the current year up to the end of the "End Date"

If required you can post the total credit and total debit, as your daily profit or loss figure, to separate general ledger accounts as follows:

- Use the Trial Balance/Balance Sheet Maintenance (TBBSM) screen to set up an income statement layout with the Total Credit and Debit amounts set to 'Total 4' (see 'Setting Up Income Statements and Balance Sheets' in the *General Ledger Administration Guide*)
- Use the Accounting Models Maintenance (ACMDM) screen to set up an accounting model for a contract type of GAIN. The accounting model must be set up for an Accounting Event Type of ST (start) and must have a fixed general ledger account assigned to it. See 'Creating Accounting Models' in the *Guide to Setting Up* for further information.

You can then use the report's 'Post the Difference' option to initiate the posting of the total credit and total debit amounts to the appropriate general ledger accounts.

Report format numbers for STMNTINC

The following table gives the Report Format Numbers that can be entered on the Report Run Parameters (RPMTR) screen.

Table 2–27. Statement of Income - Report Format Numbers

Report Format Number	Definition
1-9	Produces the income statement in the layout selected. These layouts are designed using the income statement option on the Trial Balance/Balance Sheet Maintenance screen (TBBSM).

Run Time Options for STMNTINC

The following table gives the options available on the Run Time Options screen.

Table 2–28. Statement of Income - Run Time Options

Option Narrative	Definition	Type/Text Length
Individual Reports (Y/N)	Enter “Y” to produce reports for all the individual sectors and a consolidated report for all sectors. Enter "N" to produce a consolidated report only. This is the default. See also "Exclude Sector" below.	ALP/1
Sector	Enter a sector code (such as HO) to produce a report for the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2
Currency	Enter a currency code to restrict the report to general ledger accounts that have the specified currency. Currency codes are set up on the Currencies (CCYS) screen.	CCY/4
Start Date	The date from which the report will display statement details.	DAT/6
End Date	The last date for which the report displays statement details.	DAT/6
Sector to Exclude	Enter a sector code (such as HO) to produce a report that does not include the accounts of the specified sector. Sectors are set up on the General Narratives (GNARR) screen, table type SE.	SEC/2
Conversion (Y/N)	Enter "Y" to produce a conversion report showing the foreign currency accounts contributing to the consolidated report. This report also shows the exchange rates used to convert foreign currencies into the base currency. The default is not to produce the conversion report.	ALP/1
Post the Difference (Y/N)	Enter "Y" to post the total gain/loss calculated by the report. The default is not to post the total gain/loss calculated by the report.	ALP/1
Print Zero Balances (Y/N)	Indicate whether zero balances are to be reported.	ALP/1

This report can be run at accounting centre, location and system levels.

TBBSLST - Income Statement and Balance Sheet Layouts

This report shows the layouts that are available in the system for the following reports:

- General Ledger Balance Sheet - GLBSHEET
- General Ledger Trial Balance - GLTBAL
- Average Balance Sheet - AVGBAL
- Income Statement (1) - STMNTINC
- Income Statement (2) - INCOMESTMT
- Statement of Condition - STMNTCON

A maximum of nine layouts can be set up for each report using the Trial Balance and Balance Sheet Parameter screen (TBBSM).

The Income Statement and Balance Sheet Layouts report lists the following details:

- Report layout number
- Number of the line on which a narrative is printed
- The narrative to be printed
- Number of the general ledger account that contributes to the line
- General ledger master number
- A code indicating whether or not the totals are printed, “Y” indicates that the accumulated total is printed and set to zero, “N” indicates that the total is not printed

The report has no options.

This report can be run only at the system level.

Example of Report Layout

URBIS INCOME AND BALANCE SHEET LAYOUTS VERSION 10.100 001

BALANCE SHEET PARAMETERS

REPORT NUMBER	LINE NUMBER	NARRATIVE	GL ACCOUNT NUMBER	TOTAL 1	2	3	4

1	400	BOND ACCRUALS	RBDDISCACC	N	N	N	N
1	500	BOND PROFIT	RBDGAIN	N	N	N	N
1	600	SUB-TOTAL		Y	N	N	N

TRANSLATE - Translations List

This report assists with the customisation of the report print outs. It gives details of:

- Translated headers: English headers together with their foreign language equivalent
- Translated text: English text together with the foreign language equivalent
- Untranslated headers and text

The customiser can then decide whether any further translation is required via the Report Header (RHEAD) and Report Text (RTEXT) screens, see the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for details.

Run Time Options for TRANSLATE

The following table gives the options available on the Run Time Options screen.

Table 2–29. Translations List - Run Time Options

Option Narrative	Definition	Type/Text Length
Report To Start From	The mnemonic of the report (such as CAHOLDS) for which you want to print the frame headers and text. This field can be used in conjunction with the Report To End At field to define the group of reports for which details will be printed. The group of reports will begin with the report identified in the Report To Start From field. If this field is not completed, then it defaults to the name of the first report in alphanumeric order.	ALP/10
Report To End At	The mnemonic of the last report for which you want details. This field is used in conjunction with the Report To Start From field to define the group of reports for which details will be printed. The group of reports will begin with the report identified in the Report To Start From field. If this field is not completed, then only the report specified in the Report To Start From field will be printed. If neither of these two fields are completed, then all the reports in the system are printed.	ALP/10

Option Narrative	Definition	Type/Text Length
Language	The identifier of the language for which you want translation details.	ALP/1
Include Headers?	Enter Y if you want to see details of translated header frames.	ALP/1
Include Text?	Enter Y if you want to see details of translated text frames.	ALP/1
Report Missing Translations Only?	Enter Y if you only want to see details of untranslated headers and text.	ALP/1

This report can only be run at system level.

Section 3
Core On Demand Housekeeping Reports

How To Use This Section

This section describes On Demand Housekeeping reports that are applicable to both the non-retail and the retail system. The reports are given in alphabetical order by report mnemonic.

Housekeeping reports delete historical or redundant data. They can be run during the online day but users are advised to run them outside working hours in order to maximise the efficiency of system performance.

For each report, this section gives:

- The report mnemonic and the title of the report
- The purpose of the report
- The report format numbers (if any)
- The run time options (if any)

Accounting Centre and Location Option

On several reports, the “Accounting Centre” and “Location” option enables the report to be produced for a specific accounting centre or for a specific location. This option is entered on the Report Run Parameters (RPMTR) screen (See “Running Report Programs Online” in Section 1 of this guide for further details.). If the option is not used, a consolidated report is produced for all accounting centres.

The level at which you run a report depends on the settings on the Reports (REPS) screen. See the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for a description of this screen. For example, you may not be allowed to select a particular location on the Report Run Parameters (RPMTR) screen because it has already been specified on the Reports (REPS) screen that the report has to be run at the Accounting Centre level.

ACPURG - Accounting Records Purge

This report must be run daily. It is recommended that it should be run when the system is not busy.

This report program deletes the following account history information once it has passed its retention date. The retention date is set up at installation using the Retention Table Maintenance (RETTM) screen, described in the *Guide to Setting Up*. This screen uses parameters to enter the retention dates.

- Closed client accounts - retention parameter CASTM
- Closed general ledger accounts - retention parameter GLSTM
- Stopped cheques - retention parameter STOPM
- Interest conditions and accrual details - retention parameter INTSM
- Balance details are held as blueprint parameters, described in the *Guide to Setting Up*
  - Daily history for client accounts - Blueprint BP-CA-D-HIST
  - Daily history for general ledger accounts - Blueprint BP-GL-D-HIST
- Holds on funds that have matured or have been logically deleted - retention parameter HOLDM
- Posting details that are prior to the earlier of:
  - the last statement date for the account
  - the retention date as defined by Blueprint BP-CA-D-HIST
- End-of-day details that are prior to the earliest posting that has been retained for the account

The report printout lists all account histories deleted.

Notes: *The system online date is used for all date calculations.*

In order to prevent the possibility of an action being performed more than once, this report must have the 'Multiple Execution' set to 'No' using the Report Maintenance (REPS) screen (see the Guide to Setting Up *or the* Guide to Setting Up the Retail System *for further details).*

Run Time Options for ACPURG

The following table gives the options available on the Run Time Options screen.

Table 3–1. Accounting Records Purge - Run Time Options

Option Narrative	Definition	Type/Text Length
Archive Purged Records (Y/N)	Enter "Y" in this field if you want save purged records in files for archive purposes. For details of the records purged and the files to which they will be archived, see the *Data Dictionary*. The default is "N".	ALP/1
Closed Client account@ccy	Enter Closed Client account@ccy. This is applicable for a combination of a given Client Account and Client Account Currency. The account history information is deleted without taking the retention period into consideration.	ALP/16

BASEPURG - Base Rates Purge

This report deletes expired base rate items after a period of time (set up using the retention parameter "BASE", defined on the Retention Table Maintenance (RETTM) screen at installation. This screen is described in the *Guide to Setting Up*, or the *Guide to Setting Up the Retail System*).

Base rates are only deleted where the following applies:

- The data is not associated with any outstanding contract
- The data is not associated with any Client Account interest conditions history records

The report printout lists the deleted base rate items in the following order:

- Base Rate Identifier
- Currency
- Value Date

There are no options available with this report.

Note: *In order to prevent the possibility of an action being performed more than once, this report must have the 'Multiple Execution' set to 'No' using the Report Maintenance (REPS) screen (see the* Guide to Setting Up *or the* Guide to Setting Up the Retail System *for further details).*

CIPURGCLI - Client Incomplete Records Purge

This report deletes all client records from CLINM data set that have been left at ‘Draft’ status and for which all details have not been entered. It is important that incomplete records are deleted on a regular basis, so that users do not attempt to utilise them for processing. This report will purge after the time period the CLIENM records with status “Rejected”.

***Note**: This housekeeping report will normally be run as part of the overnight process (see the* Overnight Reports Guide *for details).*

The report prints the following details for each deleted client:

- Client number
- Client name
- Client type
- Accounting centre
- Officer responsible for client

The report has no options.

DELPURG - Purge Deleted Records

This report purges logically deleted records from the database. An option is available to purge records for specific data structures.

The report lists the following information for data structures that have had records purged:

- Data Structure reference (that is, the Ispec name)
- Number of records purged
- Ordinate (that is, the data key used to extract the records)

The report can purge records from the data structures given in the following table.

Table 3–2. Purge Deleted Records - Data Structures

Ispec Name	Description	Ispec Name	Description
ACMDM	Accounting Models Maintenance	COPYM	Report Distribution Maintenance
AGNTM	Agent Details	CRTRT	Contract Running Totals
BASE	Base Rates	CRTXM	Withholding Tax Table
BCAST	Broadcasts and Reminders	CYDRY	Country Diary
BCHPO	Postings Awaiting Batch	CYLIM	Currency Limits
BHEAD	Batch Header	DEALR	Dealers and Officers
BKACM	Broker Accounts Maintenance	DIARY	Diaries
BRAUD	Base Rate/Interest Condition Audit	EMSGM	Error Messages Table
BRKRM	Broker Maintenance	EXPRM	Exposure Percentage Maintenance
BRNCH	Accounting Centre Details	FTEXM	Futures/Options Exchange Maintenance
BSTAT	Accounting Centre Contract Statistics	FTPRM	Futures/Options Instrument Maintenance
CCYS	Currencies	FTDDM	Futures/Options Date Maintenance
CLINM	Client Master Maintenance	FTDMM	Default Margin Accounts
CLPNT	Commercial Loan Participants	FTDRM	Delivery Date Rules
CLREG	Commercial Loan Register Details	FTMGM	Margin Accounts Maintenance
CNARM	Contract Diary Narrative	FXBR	FX Brokerage Rates
CNFPY	Confirmations/Payments Memo	FXPFT	FX Profit Positions (Base Ccy)
CNTRY	Countries	FXPOS	FX Accounting Centre Positions

Ispec Name	Description	Ispec Name	Description
GCCYS	Group Currency Table	PCICM	Indirect Costs Maintenance
GLDFM	Default GL Master Maintenance	PCNAR	Payment Instructions
GLMAM	General Ledger Master	PPDAT	Profit Period Dates Maintenance
GLREL	GL Related Accounts	PRNTR	Terminal Printer Address
GNARR	General Purpose Narratives	REPRC	Report Recipients
LPLNM	Limit Projection Lines	REPS	Reports Maintenance
MIDEF	Securities Definitions	RPACC	Authorised Reports
MRATM	Market Interest Rates	RPMTR	Report Run Parameters
NAMDM	Client Names and Addresses	RPOPM	Report Option Details
NONFX	Non-FX Brokerage Rates	RTOP	Run Time Options
NSTRO	Nostros	SCRNS	Screens Maintenance
NTAGO	Client Netting Agreement Output	STNS	Stations Maintenance
NTTYO	Netting Agreement Type Output	TBBSM	Trial Balance / Balance Sheet
NTTXO	Netting Instruction Dataset	TNARR	Narrative Types
OPACC	Authorised Operations	USERS	Users Maintenance
OPERS	Operations Maintenance		

The logically deleted records in the following data structures will not be purged until the end of the retention period defined in their associated Retention Parameter:

- BCAST
- CNFPY
- CRTRT
- CRTXM

Retention parameters are defined on the Retention Table Maintenance (RETTM) screen, described in the *Guide to Setting Up or the Guide to Setting Up the Retail System*.

The following structures will purge their associated details:

Accounting Centre Details (BRNCH) -	Accounting Centre Contract Statistics (BSTAT) FX Accounting Centre Positions (FXPOS) FX Profit Positions (FXPFT)
Currencies -	FX Accounting Centre Positions (FXPOS)

The following netting structures will also purge their associated details:

Client Netting Agreement (NTAGO) -	Netting Client/Current Cut Off Rules (NTACO) Netting Agreements Excluded Products (NTAPO) Netting Agreements Softlock (NTALO)
Netting Type (NTTYO) -	Netting Agreement Types Included Products (NTTPO) Netting Types Included in Accounting Centre (NTBRO)

Note: *In order to prevent the possibility of an action being performed more than once, this report must have the 'Multiple Execution' set to 'No' using the Report Maintenance (REPS) screen (see the* Guide to Setting Up *or the* Guide to Setting Up the Retail System *for further details).*

Run Time Options for DELPURG

The following table gives the options available on the Run Time Options screen.

Table 3–3. Purge Deleted Records - Run Time Options

Option Narrative	Definition	Type/Text Length
Ispec Name	This is the Ispec Name of the data structure for which logically deleted records are to be purged. If you do not enter an Ispec Name, then logically deleted records are purged for all the data structures given in the above table.	ALP/5

EXCHPURG - Purge Historic Exchange Rates

This report deletes historic exchange rates that have been held for a set number of days. Where there is only one exchange rate, this is not deleted.

The number of days for which an exchange rate is held is set up using the retention parameter EXCH, defined on the Retention Table Maintenance (RETTM) screen at installation. This screen is described in the *Guide to Setting Up*, and the *Guide to Setting Up the Retail System*. The online date is used for all date calculations.

A report is produced listing the deleted information.

The report must be run daily and has no options.

GLMAMPURGE - Purge GL Master Records

This report is used to delete General Ledger Master records which meet all the following criteria:

- Their account status is closed
- They are not referenced by other parts of the database
- They have been held for the retention period specified using retention parameter GLMAM at installation. Retention parameters are defined on the Retention Table Maintenance (RETTM) screen, described in the *Guide to Setting Up*.

The report prints a list of General Ledger Masters that have been deleted, as well as a list of those that were unable to be deleted due to existing references in the database. Also, if no records have been deleted, the report indicates this fact.

The report has no options.

SECPURGE - Purge Security Access Records

This report program deletes records of attempted security breaches that have been held for the number of days specified using retention parameter SEC, defined on the Retention Table Maintenance (RETTM) screen at installation. This screen is described in the *Guide to Setting Up* and the *Guide to Setting Up the Retail System*.

The report printout produced consists of an exception message if the report has failed or a successful completion message indicating the number of records purged.

Note: *In order to prevent the possibility of an action being performed more than once, this report must have the 'Multiple Execution' set to 'No' using the Report Maintenance (REPS) screen (see the* Guide to Setting Up *and the* Guide to Setting Up the Retail System *for further details).*

SOHSTPURGE - Purge Standing Orders History

This report deletes those standing orders and standing order history records which meet certain conditions, as follows:

- Standing orders which have been either logically deleted or have expired and passed their retention period. The retention period is specified using retention parameter SO, defined on the Retention Table Maintenance (RETTM) screen, which is described in the *Guide to Setting Up*. Standing order records which meet either of these two conditions are deleted, together with their associated standing order history records. All deleted standing orders and associated history records are listed in the report.
- Standing order history records which have passed the retention period specified in retention parameter SOHST, defined on the Retention Table Maintenance (RETTM) screen. These records will be deleted regardless of their status. All deleted standing order history records are listed in the report.

The report has no options.

Section 4
Core On Demand Processing Reports

How To Use This Section

This section describes On Demand Processing reports that are applicable to both the non-retail and the retail system.

On Demand Processing reports update the database and care must be taken when running them. They can be run during the online day but users are advised to run them outside working hours but not as part of the Overnight process.

This section gives:

- The report mnemonic and the title of the report
- The purpose of the report
- The report format numbers (if any)
- The run time options (if any)

Accounting Centre and Location Option

The “Accounting Centre” and “Location” option enables the report to be produced for a specific accounting centre or for a specific location. This option is entered on the Report Run Parameters (RPMTR) screen (See “Running Report Programs Online” in Section 1 of this guide for further details.) If the option is not used, a consolidated report is produced for all accounting centres.

The level at which you run a report depends on the settings on the Reports (REPS) screen. See the *Guide to Setting Up* or the *Guide to Setting Up the Retail System* for a description of this screen. For example, you may not be allowed to select a particular location on the Report Run Parameters (RPMTR) screen because it has already been specified on the Reports (REPS) screen that the report has to be run at the Accounting Centre level.

COSTALLOC - Indirect and Direct Cost Allocations

This report calculates and actions the allocation of costs between accounting centres, as set up on the Indirect Costs Maintenance (PCICM) screen. It displays the amount of the costs allocated to each of the accounting centres specified. There is also an option to create postings to the relevant accounting centre cost accounts.

Run Time Options for COSTALLOC

The following table gives the options available on the Run Time Options screen:

Table 4–1. Indirect and Direct Cost Allocations - Run Time Options

Option Narrative	Definition	Type/Text Length
Create Postings ? (Y/N)	Enter “Y” to create postings to the relevant accounting centre cost accounts.	ALP/1

GLACDEFUPD - GL Account Definition Update

This report must be run if any details have been changed on the General Ledger Account Definition (GLADM) screen, to effect the change across all automatically generated accounts.

Note: *In order to prevent the possibility of an action being performed more than once, this report must have the 'Multiple Execution' set to 'No' using the Report Maintenance (REPS) screen (see the* Guide to Setting Up *or the* Guide to Setting Up the Retail System *for further details).*

Run Time Options for GLACDEFUPD

The following table gives the options available on the Run Time Options screen; the report will only run if one of these options is entered.

Table 4–2. GL Account Definition Update - Run Time Options

Option Narrative	Definition	Type/Text Length
Account Number (blank for all)	Enter a specific account number for which all related automatically generated accounts are to be updated. Leaving this option blank will select all general ledger accounts.	GLA/12

Section 5
Definition of Screen Field Names

Introduction

This section lists and defines all the field names that appear on the reports screens described in Section 1. The fields are listed alphabetically.

If the field is prefilled with a value on the screen, or defaults to a value if left blank, these values are also given.

Many of the codes and mnemonics given in this section may be changed when the system is installed at your bank.

Table 5–1. Definition of Screen Field Names

Field Name	Definition
Accounting Centre	On the Report Run Parameters (RPMTR) screen, select an accounting centre identifier if a report is to be produced for a specific accounting centre. Accounting centre identifiers are defined on the Accounting Centres Maintenance (ACNTM) screen.
Cancel Report Request (Y/N)	This field enables you to cancel the report, before processing commences. The system will return you to the Report Run Parameters (RPMTR) screen: Switch on and click **OK** T Enter “Y” and press **Transmit**
Location	On the Report Run Parameters (RPMTR) screen, select a location code if a report is to be produced for a specific location. Location codes are defined on the Location Code Maintenance (LOCTM) screen.
More Options Required (Y/N)	This field enables you to view more options for a particular report on a second page if the first page is full: Switch on and click **OK** T Enter “Y” and press **Transmit**
Number	Displays the number of the option.
Number of Lines for Printed Page	The number of lines to be included on each page of printout.

Field Name	Definition
Option	Enter details of the option displayed in the “Option Prompt” field. When a numeric option is to be entered, the whole field must be filled. If necessary, the field must be prefilled with 0s. For example, for a 3 digit option, “1” is entered as “001” and “99” as “099”.
Option Override (Y/N)	This indicates whether or not you want to use default options.  Switch on to run the report using the default options Switch off to display the Report Options (RTOPS) screen and allow options to be specified T Enter “Y” to run the report using the default options Enter “N” (or leave this field blank) to display the Report Options (RTOPS) screen
Option Prompt	A description of the option available.
Output Device	This is the output device to which the report is directed:  Line Printer Terminal Printer Disk File Video Display (This option is not utilised at present) T LP Line Printer TP Terminal Printer EX Disk File VD Video Display (This option is not utilised at present)
Printer Identifier	Enter the name of the printer, set up on the Terminal Printer Address (PRNTR) screen, to which the report is directed. This defaults to the associated printer set up on the Stations (STNS) screen.
Report Format Number	This field is used to select the layout for General Ledger Balance Sheet and General Ledger Trial Balance. For example, General Ledger Trial Balance has up to nine possible layouts. To print the report with a specific format, the report format number must be entered in this field. Balance sheets are set up using the Trial Balance and Balance Sheet Parameters (TBBSM) screen, refer to the *General Ledger Administration Guide* for more information.

Field Name	Definition
Report Group	This represents the group of reports that contains the report that you wish to run.  Select the group that contains the report that you wish to run and click **OK** T Enter a letter (A to E) which identifies the group that contains the report that you wish to run and press **Transmit**
Report Name	On the Report Run Parameters (RPMTR) screen, this is the mnemonic of the report to be run. On the Run Time Options (RTOPS) screen, this is the full name of the report requested.

Appendix A
Reports Supplied

The following table lists all the reports that are provided if you have all the system modules. The list also indicates where a complete definition of the report can be found and whether the report is designed to run as a sleeping and/or offline report.

Table A–1. List of Reports Supplied

Report Name	Description	Core / Retail	Documented	Sleeping (S) and/or Offline (O)
